No it can't because I don't sell or handout MDT software. There still are outfits that sell data slicers, that isn't what got Bill busted, the software did.

Bill went from a position of helping the hobby to causing it damage. If he had been handing out just the hardware and not software to commit illegal monitoring with he would never had run into problems. The interfaces/data slicers are legal.

Nope...it CAN'T happen to me next.

1759. Sonoma, CA Police Freqs??

1760. California State Fair Frequency list update

Newsgroup: rec.radio.scanner
Date: 1999-08-20 00:00:00 UTC
From: 'kaptain' <rapture@calweb.com>
Message-ID: <37be236c@calwebnnrp>
Source record: 109406

Here is a revised list of California State Fair frequencies. The previous version was of older loggings. This new list is current as of 8/20/99, the first day of this year's fair. The new loggings were recorded at Paradise Island, (adjacent to the fairgrounds) California State University, Sacramento, Arden Fair Mall, and my home, 4410 Bollenbacher Ave. in Norwood area of Sacramento, with all or some heard at each location.
453.800 security
479.850 security - inside grounds patrol
453.150 parking security - same as last year
453.350 security - used last year, but not so far this year
474.850 security - same as last year
453.750 performers or related personnel - not observed yet this year
458.512 this was some kind of audio before. This year it has been heard, but just static. Maybe something will come up.
472.350 NBA basketball carnie game microphone. Not observed yet this year.
450.650 same as above
484.150 ?
455.700 Local classic rock station Arrow's live remote broadcast for at least 8/20/99. Not on all the time, but every now and then.

Also try news coverage too. KCRA has a helicopter on 450.100. They have covered the fair, but this frequency is not always what is used on air. It mainly seems to be for the engineers to get the right picture and stuff. 450.225, KFBK "Commander Bill" has helicopter news, and 122.750 has something helicopter.

The California State Fair's web page is at http://www.bigfun.org

I have a Tennelec Memoryscan scanner for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=149839393

and the description is

This is a Tennelec memoryscan scanner; perhaps not the world's worst scanner, but FOR SURE the world's worst scanner interface. Setting a channel involves looking up the freq you want in a book (which comes with it) to get a binary (as in 0's and 1's) code, then entering the code via front panel toggle switches. Perhaps good for teaching the binary system, but the pits for actually using the radio. Covers 31-50, 146-148, 151-170,451-470,490-508 mHz. In good condition; switches a little noisy so could use a cleaning. Works but sold as is. Very frustrating to use; someone please get this turkey out of my sight before I smash it to bits with a hammer...

Closes 8/29/99.

Thank-you.

Don't blame the Cell phone or Satellite Phone industry for not encrypting and offering us secure conversations.
It is the FBI's and other government agency faults because they want to make sure they can understand what we
are all saying at all times in order to police our nation.
This is why recently, FBI has made a movement to stop all Satellite Phone conversations in the USA, because they
can't intercept our conversations without having their own intercept satellites, and the phone companies don't want the FBI
controlling and intercepting and managing all their phone company satellites.

Hmmm. I always thought it was because they wanted to use older,
proven, less expensive equipment. I doubt that anyone in the industry
could be so clever as to think ahead to an "Upgrade." The cost does
appear prohibitive.

<funny story snipped>

I loved that story. This is exactly what the industry should be
afraid of. Of course, they could do a sting this way under the ECPA.
Even if I had heard the call, I wouldn't have called if that (foolish
and ill advised) law was in effect.

Oh well. I have a solution: Lets teach our kids to scan cellular
telephones. It takes a child to say that the emperor isn't wearing
any clothes.

Source record: 109453

Thanks for reading my post.

I have one of each radio, in good condition, both electronically and cosmetically. Displays are nice and bright. NO mods done to any of these radios. I can e-mail pics on request.

1) The DX-440 works very well. Cosmetically, someone before me blacked out the Realistic name in the upper left corner, as well as all the keypad buttons. Don't ask me why... I don't use this radio much any more, as I have others. I don't have the box or manual, but the manual is available from Tandy's web site.

Asking $85.00 plus shipping.

2) The 30 was Radio Shack's first programmable handheld. It has 16 channels and covers the same frequencies as the 2024. I do have the original antenna, box and manual for this unit.

Asking $35.00 obo.

3) This is an oldie, but works well. Cosmetics are fair, due to wear and scratches. Front panel is good except for minor partial wear on some lettering. Some screws are missing from the covers on the back and bottom. Knobs are (original?) solid aluminum. Panel lights for bandspread, S-meter, and dial work. Ranges for the DX-150B are: .535-1.6, 1.55-4.5, 4.5-13 and 13-30 MHz. Bandspread bands: 3.3-4.1, 4.85-5.1, 5.75-6.25, 6.6-7.4, 8.4-10, 9.5-12.5, 13.7-14.4, 14.7-15.5, 16.8-18.1, 19.8-22 and 25.5-30 MHz. Supplied with matching external speaker.

Asking $50.00 obo.

Shipping is not included for any of these radios.

Please e-mail me if you are interested or have any questions.

You're going to get lots of replies on this one. A troll in newsgroup terms is
basically "a setup message" that is posted with the sole intent of obtaining
many responses.... most of the time it's text contains information that is very
"HOT" where the group is concerned. You troll, like in fishing, for repliers.
Hey..... is this one of those troll messages ???... Just kidding !
Have a good one.... and as I said you will probably gets lots of replies,
including some from some very good trollers.
Good thing you didn't ask "What is a FLAMER ?"

>in
>LA? >>>>

Just for FYI:
What L.A. is famous for, besides the obvious, is TV NEWS helicopters. So if you have a C of ku band sat dish and receiver..... and you don't live within the reaches of any L.A. tv stations signal..... and you want to see all the latest and greatest live action... concerning anything "they" might think is news worthy... scan the sky with your dish. "I have heard" you can watch plenty of "LIVE" chopper feeds.... even when they are not "HOT" on the air they broadcast through the sat....to the station. "I have also heard" that they keep the mics hot so you hear most of what is happening inside the chopper while they scan and pan for those "HOT" stories.

Can someone give me a programming overview for a Bearcat 300?

I have one that needs a little work, Puerto Rico 1984 vintage:
*Low display intensity; bad capacitor I think.
*Does not seem to want to accept frequencies into any of the bank or priority channels. Could be a bad IC chip or just an error on my part since I don't have the manual and am not familiar with this model.

Everything else seems to work fine. Service Search pulls out all kind of activity on all bands, and I can enter a frequency to monitor but not scan.

If anyone has a manual that they would be willing to fax to me, please drop me a note directly so I can give you the 1-800 number for my fax machine at work.

Thanks,
Eric

Gee, what a great salesman. (sarcasm)
I'm so excited in buying your scanner. (sarcasm)
I'll pay double for it since you convinced me it is so great. (sarcasm again).

| This is a Tennelec memoryscan scanner; perhaps not the world's worst
| scanner, but FOR SURE the world's worst scanner interface. Setting a
| channel involves looking up the freq you want in a book (which comes
| with it) to get a binary (as in 0's and 1's) code, then entering the
| code via front panel toggle switches. Perhaps good for teaching the
| binary system, but the pits for actually using the radio. Covers 31-50,
| 146-148, 151-170,451-470,490-508 mHz. In good condition; switches a
| little noisy so could use a cleaning. Works but sold as is. Very
| frustrating to use; someone please get this turkey out of my sight
| before I smash it to bits with a hammer...

Why, thank you for coming to my defense Willi. And no, to answer your previous question, my PhD is not in Abnormal Psych (nor is it in Ebonics). I'm curious, though. You seem to know Mackey really well, don't you? Why is it that he believed your very simple question of what my PhD is in to be some kind of insult? Since my PhD is *not* in Abnormal Psych, I find it very odd that after you ask such a simple question, Mackey would interpret it as some kind of insult? Now *that* must be abnormal, don't you think? Hmmmmmm......

Anyway, again, thank you for replying to Mr. FULLMAILBOX on my behalf.

So I ask: Is it ethical to do business with a company like that? If I
want to build something,I stock up on parts well in advance. I make a
few big buys every year mailorder or at the hamfests,occasionally going
to the "professional" suppliers who tend to pander to specific niche
businesses but who at least have inventory. What does Radio Shack have
that I need,of good quality and reasonable price??

If people who know what they are doing would have no dealings with
Radio Shack,and let it be known, changes would have to be made. Radio
Shack handles components and hardware primarily-despite selling two one
cent resistors for a buck-as a loss leader. (The markup is great but the
shelf space costs eat them alive).They are presenting the image of being
the technically knowledgeable source,et al.

Define "best game in town".Sky high component prices,highly limited selection,poor quality tools,high rent shopping mall locations? Mailorder is much cheaper and more convenient. If I need it NOW I go downtown to a distributor.

Ah, like the Radio Shack COMP-100. One of the most aggravating
pieces of equipment ever made. One of the best designed and most
poorly implement designs, and absolutely worst QA'ed designs. But
one of the most sensitive UHF front ends ever put into a scanner
offered for sale to the public.

EX Radio Shack employee. I quit in 1985, after 9 years there.
I did my stint in retail for a short time. I saw the 'experts' come
in the door that were dumber than some of the clerks in the
store, and the only thing they had to feel good about, from
their own point of view, was they could put down the stupid
kid at Radio Shack.

I ran a small store in a small town of 3000 people. But I beat
every store in my district except one on a regular basis. I had
3 customers one day, total. I had negative days, where I had
to tell a customer once I'd cut him a check because I was already
behind. But I also had $13,000 in one weekend, actually durring
a flood. (This was back in 1977.)

I ran a good percentage profit, even with low numbers, because I
always kept my parts wall full. Much more full than what inventory
said. The frequency counter kit took almost 50 packs of one resistor,
but inventory said keep 5. Right. I kept 200 back, because I also
kept DOUBLE the stock suggested for all the kits, and I always tried
to make sure I had enough parts to build every kit on the wall. I
even went so far as to build kits in my slow time and leave them on
display. Cost pennies, and generated sales. What the hell are some
Managers doing when there's not customers in the store. They
sure aren't managing the store, I'll bet!

I copied schematics up for 'projects' and had them behind the counter.
From things like descramblers (when the local police used an
inversion technique to be 'private') to a box to use your car antenna
as a CB antenna.

I almost doubled my CB sales when I picked up an old Johnson
and put it on my counter with a clear acrylic cover next to a
TRC-52 with a clear cover. I did the same for scanners when the
PRO-2001 came out. I had them almost 4 months before anyone
else. Actually what happened was I used to always check inventory
decks, and fill out orders for one of every single stock number
and send it to the warehouse. 99% of them get kicked. Well, for
some reason I thought the 2001 was a small item, so I make up an
order for 6 of them. Then next month I did 6 more when the first
was ignored. Suddenly I had 12 of them. They weren't in the catalog,
and no one knew what they were. I did though! But I had them out
of there faster than snot on a cold winter day. Turns out they were
the initial shipment for QA approval, and they had fits when the
warehouse shipped them to me! Too bad, I had some happy

customers, and other stores that I could redirect a few too (at an extra 8%!).

I made up plans for speakers, and when Tandy came out with the T100 speakers, and all the college kids liked them, I ordered raw elements, marked them up maybe 5-fold, and put them out as kits with instructions. Kids got speakers for about half price by the time they were done, and I made even more profit. And I NEVER EVER charged a kid for replacing a speaker that he put a screwdriver through, the first time. If they did it more than once, I'd charge him what it cost me for another.

I turned profit, and made lots of customers.

And I will admit there were toads at Radio Shack. Give them a break, they were basically kids or retirees, or housewives. Not engineers.

But the worst toads were the ones that came in the door like little babies that tried to show how much better they were than one of my employees. The ones that wanted help to find the wall because they were too stupid to take any initiative on their own, and then would 'tear into' the clerk because he didn't know what a Zener is. Or try to spring a 'tricky' question like 'I need a fast recovery diode' and then go on a tirade. (That one sticks in my mind, because I intercepted the customer, and asked he why he needed 'fast recovery'. He didn't know. He didn't know what they were used for. He shut up when I pulled out the cross reference book and found that I could order them, for about $8 a piece (although he probably could have gotten them for about $4 by shopping around). Not many people knew that if the part was used in any RS equipment, we could order it. I think they were used in some really wied old radar security system.)

Sure, some employees were 'less than engineering candidates' shall we say. But some customers were worse.

As to your other post...

>| Too many people are narrow minded in that they look at what THEY
>| would do, and assume it applies to everyone else.
>
>That was a very narrow minded comment.

I stand by that. I have what "I" feel is the correct way of things. In some cases, I KNOW it's correct, but I'm not so arrogant as to think I can force it on anyone else. (Abortion issues come to mind)
I had a problem in my store, wondering why in the world anyone would ever buy some of the crap I had in the store. Gotta be top line or else.
But then, sometimes that's not what people want. If it fits their needs and does what they want at a price they are willing to pay, then it's for

them. Who cares if the STA-2200 receiver was the same MOSFET
power amp as a competitors $1200 receiver. Who cares if the
SCT-3000 would blow away a Nakamichi in all but one spec, or that
on the SCT-30 cassette the 0db and -20db curves never intersect
(THAT was phenominal, if only the amp was quiet enough to match
that spec, it would have been one of the best cassette decks on the
market, at ANY price!) but some people still bought stuff RS called
the Clarinett. ARRGGHH!! But it was what THEY wanted to buy, not
what I wanted to sell. That took a while.

Mike Yetsko

1790. Northern NY Air Refuelling Activity

Newsgroup: rec.radio.scanner
Date: 1999-08-20 00:00:00 UTC
From: detalus@dido.org
Message-ID: <37bd9149.15476668@news.magma.ca>
Source record: 109471

Been listening to 276.5 (Northern NY, VT, NH, ME) air refuelling track frequency last nite and today (Friday) and it's been busier than usual. Last nite around 10 - 11 PM a couple of KC-10's from McGuire (TEAM callsign) were doing some night booming instruction. They were also talking to Boston Center on 135.25. Today it's the NH ANG KC-135's (PACK cs) and VT ANG F-16's (JAWS), also talking to Boston on 123.875. Also heard a DEMO callsign in there along with some scattered other stuff on a few other freqs - unknown military a/c on 255.4 (FSS freq), 280.8 (REACH medevac w. 19 on board inbound Ft. Drum).

More military aircraft are showing up on VHF nowadays. Boston Center on 135.7 (282.2) is still the best one. And there is often activity on 138 MHz - mostly Syracuse ANG F-16's. Never been able to figure out why they are using FM mode.

>"unfairness".

Well, I'll concede that, but to complain about a "thin" site when you have none of your own is just plain rude. Don't you agree? If ScanShacks site is so thin, well all I can say is "where's yours?"

> Who's Mike? Why should I answer his question, or yours? What is the
>connection between Mackey, what I said about a scanner website, and an
>inventory of my scanners?

No one says you should or shouldn't answer willi. In fact, no one is forcing you to read this stuff at all, are they? So if you don't want to answer, then don't! Matters not to me. You just seemed like, for a brief shimmering moment at least, you gave a crap about this place. But I guess I was wrong. By all means, carry on your tireless crusade....don't let me stand in your way.

> But you don't chastise "Macaroon" for that, do you? Don't they
>teach you to be evenhanded at NetCop School?
I wouldn't know about that one. Ask Officer John. I don't chatise Macaroon because it wouldn't do any good. And now I see the same holds true for you. So no more chastisements from me, wee one..

> The jpeg was hilarious, I'll have to admit.

Thanks! Glad you liked it and glad you have a sense of humor unlike some other folks on this NG.

>Maybe ScanShack can add
>it to his *excellent* website.

>into the country will get you locked up for eternity, I don't want to think
>what they would do with scanner listeners!

Agreed. AFAIK, scanners are illegal in Mexico. Seeing as I don't speak spanish, I wouldn't have much use for one there anyway, unless I wanted to listen to the INS.

And in light of the incident mentioned above, neither I, nor any member of my family, will ever darken the threshold of that misguided country, let alone set foot in any part of it. US citizens are viewed in the same way illegal aliens are viewed here - as a pest. The only difference is we have money that their corrupt economy needs to survive, so they tolerate us. Well no thanks - I know not to go where I'm not welcome.

Yeppo.... by todays standards these babies are real dogs..... but when they
first came out.... and I didn't need to run to the store to buy a new crystal
every time I was told about a new frequency that could be heard..... these
babies were the BEST.....
But times change.. and technology does progress....
I've seen those sell on Ebay before so you probably shouldn't have any trouble
getting a few bids. Good luck with your sale !
Have a good one !

I don't consider the prices sky high, but you do pay for the convience.

>highly limited selection

never had a problem finding what I needed. No they don't carry every IC made, yes they have filled my needs for resistors, transistors, common ICs, diodes, sockets, jacks and othe common component.

>,poor quality tools,high rent shopping mall locations?

Nonsense. There are 2 Radio Shacks within a mile of my house and neither is remotely close to a mall. Do you boycott all stores in malls and other high rent locations??

> Mailorder is much cheaper

Nobody said differently, but the RS doesn't demand a minimum purchase and charge shipping and handling.Call Digi-Key up and ask them what it will cost you to buy a 300 ohm resistor. You want it ASAP, just one or two. How much?

> and more convenient.

No it isn't convient to mail order. It is time consuming.

> If I need it NOW I go downtown to a distributor.

Not everyone has a local distributor to go to. I happen to have one in my town and if you aren't buying on a commercial account they are right there or higher than the Shack on prices. Fact is electronic distributors are far and few. Radio Shacks are everyplace, or so it seems.

BTW, is your distributor open on weekends? Sundays? Nope.

<jetronix@earthlink.net> writes:

>They are presenting the image of being the technically knowledgeable source,et
al.

Exactly my point. Radio Shack has gradually evolved into a general electronics
retail store (computers, cellular telephones, etc.) and away from a specialty,
hobbyist store. Gone are the "P-Box" and "Science Fair" kits of yesterday. As
such, nobody would expect them to be technically knowledgeable anymore, EXCEPT
for their ridiculous "You're got questions, we've got answers" slogan. This
implies that they DO have knowledge in the technical aspects of electronics. A
trip to your neighborhood store will quickly show you this is not the case at
all."

>TRC-52 with a clear cover.

Yours must have been an "authorized dealer" store, rather than a company store.
The know-it-all District Manager would NEVER allow you to keep more inventory
than what the bible from Fort Worth specified. He would surely confiscate your
extras, ship them off to another store, then give you a lecture on "efficient
use of merchandising space."

And you would never, EVER be allowed to display anything other than official
Tandy/Archer/Realistic merchandise on the counter! Heaven forbid, you might
give someone the idea to purchase a brand other than the overpriced, inferior
product line offered by the company.

Has to be the Tennelec (which I believe was the first fully programmable scanner.) Was considered a technical marvel at the time, but grossly inferior by today's standards. Seemed like it had a birdie every 100Khz or so.

Phil , I thought we made a deal here. I said I would filter the Looney out, and I did. I no longer respond to his inanities, so why do you persist in doing exactly what you asked us to NOT do ? By responding to him, you have brought his stupidity ro us again, something I have filtered at least 20 people for doing.
You know, it is no good trying to reason with the Looney, and filters are no good unless you turn them on and leave them on......

Uniden SC150 Sportcat handheld scanner
Covers: 29-54, 108-174, 406-512, 806-956 MHz (less cellular)
Features:
100 memory channels
100 channels per second scan
100/300 channels per second search
Data Skip
10 priority channels
preprogrammed band search
one touch weather and much more!
For additional information and a picture see:
http://www.uniden.com/docs/product/prdetail.cfm?product=SC150Y
Yellow
Has rechargable Ni-Cad battery pack
Includes AC adaptor, "rubber duck" antenna, beltclip, and manual.

Excellent condition!!
$90 + $5 for priority mail shipping

Email me at "s f t at c r a y dot c o m" if you're interested.

It also hums very loud. I had one next to my bed and
couldn't stand it. If I pulled the plug, I would have lost
the memory and had to look up and reenter 12 long
binaries, or maybe if I were lucky, just worn down the
backup 9v battery.

True story . . .

I never give out ANY personal data to cashiers, no matter where I shop. But on one occasion a couple of years ago, when an RS drone once again started in by asking "Name?" I replied "Irrelevant".

He asked "How do you spell that?". I thought he was just kidding back at me. He wasn't.

>the 100k resistor pack you need to finish off your project on Saturday
>morning, the markup percentages are in the hundreds.

I'm not sure what calculations you would do on the back of an
envelope, but I guarantee you the margins are not what you're
guessing, and certanly not on par with those of other industries.

Those telephones they sell: 10-18%
Televisions: 16-22%
Stereo Equipment: 18-27%
Portable Audio: 13-26%
Computers: 10-15%
Batteries: 30-40%
Video Tape: 25-35%
VCR's: 13-18%
CamCorders: 13-22%

I may be off by a little here and there, but I'm not off by much.

That is the percent they make when you take selling price and subtract
cost, of goods that are current stock, in box, etc. Discounted
merchandise will be substantially less markup obviously. And
discontinued product that has been reduced to clear out is usually
sold below cost. Factor in the location expenses, advertising
expenses, salespersons' commissions, and returns, and you have a
business that makes almost nothing unless they sell you a warranty.

No, I don't work for radio shack.

Pro 60 handheld scanner in good condition, unit works and will include a rechargeable ni-cad pack that is new. PRO 2038 is small mobile/base unit that has a AC adapter this scanner is in excellent condition and I will include a magnetic base mobile scanner antenna. Asking $100 for each including shipping and ins. Will consider trade for shortwave radios. E-mail me if you have questions and I will try to answer them.

>

I own a scanner because when I sail on the Great Salt Lake, I use it to listen on the Marine bands. My boat's radio will only listen on one channel at a time. That makes it tedious to follow the conversation when I'm cruising with a group of boaters who follow the proper protocol of using channel 16 to hail and another channel for discussion. The scanner makes it easier to hear the conversation. I also use it to pick up the weather forecast on the way to the marina. I also use it to listen to departure and arrivals at the airport tower when I happen to be at the observation area taking pictures. I use it to listen in on oncoming trains when I'm taking pictures of them too (to alert me when they'll be arriving). I use them to monitor my FSB radios when they're being used by the shore-party (on GSL cruises). I use the scanner to listen in on hams sometimes so that i can get more familiar with how their world works. And, I use the scanner to listen to the police and emergency broadcasts when I'm home bored. ...it beats watching cops on tv.

None of the above uses are illegal, and none of them are even remotely questionable in their ethics. They are all legitimate uses, and uses for which a scanner is designed. The attitude voiced by a police officer earlier in this thread, that all scanner users are criminals, and that they should be outlawed, it typical of the attitude I see of many people who have some power and authority, and feel that it's their place to use that power to wage war on us law abiding citizens just because they have a grievance with the criminal element of society. When you're exposed to "bad" all day long, I suppose it's easy to see only "bad" in life. But try not to push your negative attitudes on me.

I was always told that radio scanners are illegal in every country without the propper licence.
If you have a radio receiver then you must by law have a radio licence for that receiver.

In the UK and Ireland, the TV Licence appears to double as a radio licence for the normal comercial radio frequencies.

I know that if you do not have a TV but do have a normal radio then nobody looks for a licence, but this does not alter the fact that one is officially required.

If you have for example a receiver capable of picking up the aircraft band 118.00 to 136.975Mhz, then you need a different licence (not the R/T Licence issued by the CAA but an "Aircraft Radio Licence" issued by the Radiocommunications Agency). This licensing law has been highlighted in the aviation press recently. I think the licence costs about £30+ per year and is required for all instalations including handhelds and this is emphasised in the ad..

Please note that as far as I know, it is never possible to obtain a licence to operate a receiver which is capable of tuning to the frequencies used by the police and security services unless you are a member of or employed by such services.

Most spotter books say this but also point out that the law is very rarely enforced in the UK or Ireland. Who knows how the laws are enforced abroad.

What I could suggest is if you have an R/T Licence that you keep it with you as this while not being a legal cover for operating a scanner may just get you out of trouble if the local "Sherif" decides to press his luck in the run up to elections!

Danny.

Tony - just curious as I have been corresponding with a Japanese dealer about the VR-500. The dealer is telling me that the VR-500 out of box has two segments of its reception blocked in Japan. 380 - 382 and 810 - 835 if I remember correctly, Is your unit this way?

For a few more Yen they sell a dealer modified unit that the dealer calls a 500S - it restores the continuous coverage.

He also has a new one called an 500SS but I don't as of yet know what the differences are with it.

You might check with Rich Wells over at Strong Signals about an English manual. He was looking for the same thing.

Thanks - Curt

Hello All,

I was at one of my local Radio Shack stores tonight looking into a trunk scanner. The "owner" of the store was the one helping me and we were pretty much by ourselves. He said it would be in my best interests to wait a couple of more months. Upon asking why, he showed me the not yet released version of Radio Shack's new catalog. In it are 2 new scanners. Both cover 25-512 and 760-1300 MHz as I recall. Both also follow trunk tracking systems by Motorola and Ericcson. The only difference between the 2 is that one is a base and one is a handheld. Both are around $300 each. I am now patiently waiting again.

Hopefully Helpful,
Norvin Adams III

>required there for digital services?

Probably Australia. Our analog system shuts down in December this year to be replaced by CDMA. Some dual mode phones are available, or else switch to GSM (930ish MHz)
About half of the analog system has already shut down, there is nothing to be heard between 885-899MHz.

I was shopping in an RS store during a recent visit to the USA and the guy asked for my name and address. I said he needn't bother as it wouldn't work, but he insisted. OK, you asked for it, I thought.

Street name was fine, Colorado Drive. When we got to my State, NSW, it would not fit into two letters, NS was rejected by the computer as non-existant. That stuffed him, so he put in CA (why bother), then we came to the zip 2759. This genious tried to argue with me that there was a digit missing, and then added another digit of his own. (92759) I was getting annoyed by now. So was the guy waiting behind me.

What a waste of time. You'd think he would have been able to figure it out from my accent. There ought to be more John Citizens out there.

George, I don't see where I declared him guilty but I'm not going to say it looks like Bill was innocent. IMHO Bill caused his own problems with his web page. Others that sell the same type interface have never run into problems with the Feds that I am aware of. Again IMHO posting on your web site that you will supply a person with an interface and posting on the site that the software is easily available on the net is waving a red flag at a dumb bull. If he also supplied the software as I have heard but can't substantiate, well that would be asking for trouble. Incidents like this regardless of the outcome put one more bullet in the gun the politicians have to the scanner hobby head. It's not good for Bill or the hobby.

I just checked

one time it worked, (using netscape 4.5) next time file was not found on the
server :-) within 3 minutes.
Maybe this server has some traffic-problems ???? ;-)) or they checked out the
enourmous file-request and put it off the server ?? :-(due to the newer version
??

I don't know.

but I know that several guys went lucky downloading..... :-)
Maybe some are willing to email the 3rd file by request ?
or putting it up on a server again.........

>No it can't because I don't sell or handout MDT software. There still are
>outfits that sell data slicers, that isn't what got Bill busted, the
>software did.>>>>

Hello Glenn,

I was looking for the references to where Mr. Cheek got busted for the "software". My understanding is the "devices", the "kits" he sold to the undercover officers is what the bust was all about.

Can you direct me to any of those "software" references? I could only find text like what came out of Bill's letters and articles that appeared in newspapers such as the San Diego Reader which I quote below:

" According to the complaint, the Cheeks sold a team of undercover New York police five kits over the Internet. The kits unscramble the encrypted messages that pass between mainframe computers at police and fire departments and those onboard computers, or mobile data terminals (MDT), you see in the front seats of police cars these days.
The kits, the complaint alleges, "are primarily useful for the purpose of the surreptitious interception of electronic communications, to wit: mobile data terminal information broadcast by law enforcement agencies and emergency service organizations, in violation of Title 18, United States Code, Section 2512 (1) (a)." "

I have information concerning the bust on my web site:

http://members.aol.com/noobody/bcbust.htm

and if you could get me the info on the software related bust I could add that to the page.
I hated to see this happen to Mr. Cheek as I have been following his information sharing for years. He has added much positive aspects to our hobby, let's not forget that please.
Thanks !!! Have a good one.

It has been my observation over many years that the number one priority for hiring salespeople at company-owned Radio Shack stores is looks. Knowledge of the product does not factor into the equation. I generally find the service (and knowledge) better at smaller independently owned Radio Shack dealers, often found in small towns.

Date code does matter if you want a newer unit or if you want to be
sure that the radio has the light switch rather than a dimmer switch.
What is wrong with a little extra info? Judging from this post and your
previous post, you seem to be angry at the world. Hope you feel better
soon.

1862. Re: Dedicated aviation handheld vs. general purpose handheld

Newsgroup: rec.radio.scanner
Date: 1999-08-21 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <wNzv3.3900$Pv4.1916@news.rdc1.mi.home.com>
Source record: 109359

Gerry:

I'm not aware of a dedicated aviation "scanner" made by ICOM. They have an aviation hand-held "two-way". You would think a dedicated aviation receiver would be optimized for that band, but I used to own one of the old Sony's, and it didn't seem to be all that impressive. It looked cool, but I was disappointed in it's performance.

Keep in mind, the frequency channel spacing between 118~136 MHz, was recently narrowed, to allow for an additional number of channels, and because of more advanced equipment being able to stay within frequency. Older equipment would not be able to tune the band properly.

No. The sensitivity of these devices generally isn't adequate for reception
of distant signals. You will be much better off with a scanner costing much
less.

1871. Beware " OUTLAWW "

Newsgroup: rec.radio.scanner
Date: 1999-08-21 00:00:00 UTC
From: leadenwah@aol.com
Message-ID: <19990821155521.23419.00002557@ng-ff1.aol.com>
Source record: 109368

Watch out for this guy: outlaww@hiline.net. He told me that his name was J.D. Sullivan and that he worked in law enforcement in Harlingen, Texas.

I cut my price on 2 radios, sent them postpaid to him, he received them, loved them, said he'd pay right away. After several lame excuses he has failed even to return calls these days. It is up to 4 months now.

Because he said he convinced me that he was a law enforcement officer I made the great mistake of trusting this fellow. I guess that his e-mail address (OUTLAWW) pretty much speaks for itself.

I suggest that both sellers and buyers beware of this person.

1872. PRO-92... Am I dreaming or what???

Newsgroup: rec.radio.scanner
Date: 1999-08-21 00:00:00 UTC
From: chuck@nospam.la-radio.com
Message-ID: <37bf012d.13238513@news.uia.net>
Source record: 109369

For all of the complaining we do about Radio Shack (myself included in that "we") I think the new lot of scanners will be great. I am especially impressed by the PRO-92 which will be included in the line of RS "next generation" trunking scanners.

The 92 manufactured by GRE of Japan basically offers all of the bells and whistles of the Uniden BC245 with a few significant additions.

First and most importantly (I think) is the ability to enter Alpha Tags for memorized channels. We all know how cool it is to see the name of those seldomly used freq's right on the display. Now I can leave the "Master List" at home.

Additionally, (and another biggie) is the ability to program CTCSS/DCS tones into the radio. For those of who live/work in large metro areas this is a must. Here in my area I have problems between Riverside and Orange County law enforcement using same freq's. Enter the PL tone for each and that problem is solved.

They have also gone back to the "AA" battery plan. Now you will no longer be at the mercy of that shrink wrapped battery pack that everyone seems to hate so much (although it works for me).

That's my opinion on what I've seen so far and I'd love to hear from anyone who has more info about this new radio. Below are some links to sites that have info about the new RS scanner(s).

Sorry, I looked and can't find where I read it. I will keep looking and send it to you if i find it. There are a number of sources for the data slicer similar to what Cheek was selling. They are still on the market so I find it hard to believe that was what got Bill busted regardless. His web site also "bragged" about the easily pbtained software...strike 2?

Glenn

I am entertaining offers for this radio. It has frequency coverage from .5 to 2040 with no gaps. This is the model from Bandercom with the modifications to speed scan and search to 32 cps, reduces the interference on the basic model by 35%, and has a green led on top of the scanner comes on when squelch is open. Comes with the original manueal, the printed online manuel made by Rich Wells, the yupiteru case, nicad batteries, and the cigarette adapter. For a review of the scanner click here http://www.strongsignals.net/htm/mvt-9000.htm If interested email me with an offer at mke65@hotmail.com Keith

On some Radio Shack scanners, the military bands can pick up cellular phone frequencies. The military band being 225-406. That may be the reason for Radio Shacks behavior. Radio Shack is a huge provider for cellular phones. It is possible that they have found out that they must be for the cellular industry or against it. Against it
means scanners from RS might have to loose a few features. They have made scanners in the past that have military bands in them,

one thing i think people have to remeber or be inform of is that any time u
talk on any radio, if
its that important don't used anything that tx's RF.. common sense..

Hello,

I would like to invite you to my new webpage that is for and about Colorado's diverse public safety monitoring hobby. Here you will find statewide frequencies, radios codes deciphered for you as well as many agency's callsigns. The page is still being designed and constructed. But, please stop by and take a look. And when leaving, please provide me with you comments, suggesions or corrections.

The URL is http://home.mho.net/n6rhl

Thanks, Dave..

From: wildthing <wild1413@email.msn.com>
Message-ID: <O7AsJoC7#GA.287@cpmsnbbsa05>
Source record: 109386

I had it at one time and deleted it by mistake. I would like anyone who may still have it, version 2.1 and the 2.2 beta update to please send it to me at wild1413@msn.com.

I still have the 8 page writeup on it that used to be on the web, just can't find the program anywhere. Yes I know its "DEAD", yes I still want it, if not for anything but to check out.

Yes I have tried SCANCAT and my opinion is of it is not very high. Yes I have seen Radio Manager and tried the demo and no did not find it user friendly. Yes I have seen PC895 and now the newer version and NO I am not impressed with those either. Yes I will probably not find freetracker to be the solution but I would like the opportunity to try it out.

Last but not least, YES, I am writing my own controlling programs for the 895 at this time I have 4 started, 2 in basic, 1 in pascal and 1 in VB3.

Thanks for your time. Wayne.

1890. RS Pro-2026

Source record: 109387

I'm new to the list, and relatively new to scanning and radios. I currently have an RS Pro 2026 100 channel scanner. This was great, until my County Police went to Digital 800 MHz! Then, to make it worse, they took down the link to the old 156 MHz frequency!! I can still (for now) listen to Delaware State Police. However, as I work in County Communications (and will soon be a dispatcher) I REALLY want to be able to listen to the Police stuff!!!!! Any thoughts? I can't afford $3000 plus for a portable or mobile unit!!!

1901. How do I reset or "wake up" my Bearcat 200XLT?

Newsgroup: rec.radio.scanner
Date: 1999-08-21 00:00:00 UTC
From: rfenforcer@aol.com
Message-ID: <19990820223745.15609.00001160@ngol06.aol.com>
Source record: 109413

My 200XLT has been a reliable companion for almost 10 years now. The battery pack died a few years ago, but this doesn't matter as I only use it with external power. After setting for several days with power disconnected, I turned it on today and it wouldn't power up. My first thought was that a dead cell had shorted the pack (since external power plugs into the pack portion of the radio), but the meter shows full current/voltage at the pack's output terminals when external power is connected (and zero when it's not.)

My thoughts are that the radio has somehow been "put to sleep" by sitting for several days with a completely dead battery pack (and thus, no power to the memory.) Is there a keyboard sequence to reset and "wake up" the radio again?

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

Oh, come on, give RS a break. All you have to do is say no.

I say thank God for Radio Shack. They have the parts and stuff that you can't get any where else on a Saturday or Sunday, or evening, when you are working on a project.

As far as asking for my name etc., I am delighted when I get a Radio Shack flyer in the mail.

Source record: 109416

Hi,
I wrote a message to bill@bills2way.com asking him if he would meet a price on the BC3000XLT because on his site it says "Whenever possible, "Bill's 2-Way", match advertised web prices. As long as that item is in stock at the advertising dealer. That price will be met. Some distributors sell direct to the public, and those are the exception." . Bills2way has the BC3000XLT listed for (prices in American dollar) $308.49 and I found it (new) for the fantastic price of $280 w/ Air Shipping! It is in stock, listed on the site, and not being sold directly by Uniden. He told me he would not meet the price and then began dribbling on to me and writing as if I were a 5 year old. I just wont do business with him and would encourage any of you not to just because he is a jackass.

B.T.W. If you want to get that deal on the BC3000XLT go to http://www.javiation.co.uk/ and go to the specials section. The have prices listed in American currency so I assume they ship to America. (might be a good place to get *cough* cellular capable *cough* scanners)

I can and I do. And they deserve it.

>It is the FBI's and other government agency faults because they want to =
>make sure they can understand what we
>are all saying at all times in order to police our nation.

The FBI and other law enforcement agencies can (with a court order)
tap any telephone call at the centra office, where the traffic is in
the clear. They have no legal need to get it off the air as you
suggest. You'll note that digital cellular systems such as GSM *are*
encrypted, which handily disproves your theory.

The reason analog cellular is not encrypted is plain and simple:
COST. Back in the late 70s when the first AMPS systems were being
designed, the technology of the time was not up to the task of
digitizing and encrypting cellular radio transmissions, at least not
at a price consumers could afford (remember that back then a cellular
radiotelephone cost upwards of $1000). The cellular radio providers
had a choice: deploy now, with an unencrypted analog system, and start
raking in the bucks, or wait 5-10 years until digital encryption
technology became affordable. You already know which choice they made.

Once there was an installed base, significant changes were also too
costly to implement (imagine the bean counters at Cellular One
approving the expenditure to replace each and every customer's
cellular radio phone with a new digital unit). This is why the
cellular industry lobbied long and hard for BS legislation like the
ECPA; it was cheaper to pay for lobbyists and congresscritters than it
was to replace the analog system with an encrypted digital one.

Fortunately, the original decision to only allow two analog cellular
carriers in each market forced anyone else who wanted a piece of the
pie to develop an entirely different system. Fortuntely for us
consumers, the newcomers had better technology to work with and could
offer reasonable security and privacy at reasonable prices.

NOTE: Spam countermeasures in effect. Please post responses to this newsgroup.
Thank you.

Yeah! No point in expecting the STORE EMPLOYEES to have anything even
remotely resembling PRODUCT KNOWLEDGE, including WHERE THEY ARE KEPT
IN THE STORE!

Unfortunately, unlike bigger chain stores like Target which are often
merchandised identically according to some master plan handed down
from the corporate office, Radio Shaft store managers are free to
merchandise the stores any way they like. Some have even pulled the
idiotic stunt of arranging stock by type (e.g. the 10uF electrolytic
capacitors are kept next to the 10uF ceramic disc capacitors) rather
than by catalog number. In theory, it should be faster to ask a droid
where the scanner antennas are than to perform a brute-force linear
search of the entire wall area. Unfortunately, such a question more
often than not results in a slack-jawed, blank expression rather than
a useful answer, but it's generally a gamble worth taking.

Lemme guess: You went from being a Radio Shack manager to being an
Insurance salesman? ;-)

I never said insurance was a bad idea. In fact, I think it's a
necessity. The difference is whether you pay someone else to insure
you, or whether you self-insure. Some people have the discipline to
save their money, invest it wisely, and thus have sufficient financial
breathing room to handle automobile repairs, TV repairs, and other
periodic expenses. Other people think "insurance" means never having
to pay for repairing something when it breaks. They buy the extended
warranty, they keep the smallest deductible they possibly can on their
comp/collision coverage, and they make a claim for each and every
little scratch and ding. Either they don't realize (or they just don't
care) that they are ultimately still paying for the repairs; they're
just paying monthly rather than in widely scattered bursts. The major
difference is they are also paying the insurance agent a commision
every month, and they're giving the insurance company a little profit
every month, money they could be keeping for themselves if they wanted
to.

By the same token, there are wealthy people in this world who know how
to handle money wisely, and there are Joe Sixpack types who don't.
And, just as the odd in Las Vegas casinos are stacked in favor of the
house, the odds for extended warranties are stacked against the
consumer. If you buy one, you might get lucky, but chances are you
won't.

>encrypted, which handily disproves your theory.
>
It's not about a legal need. In order for the police to tap
a phone, they have to have to work with "civilians" . In
the US, anyway, the police don't view themselves as
civilians. Civilians are a separate group. The feds don't
like to have to deal with another group, by pulling cellular
out of the air they don't have to.

(If they were truly not "civilians", then they wouldn't be
allowed to run around with loaded weapons in any civilized
society, IMHO.)

They don't have a concept for invation of privacy being
immoral. They see "protection" as more important than
freedom. It's a mindset. Sad part is that many people
agree with them. "Think of the children!" they chant. "To
hell with our children's children", they should be thinking.

The other thing they've wanted is the ability to pull
telephone call routing information from the carriers,
without court order, without any intervention or knowledge
by the telcos. In their view it's not unconstitutional to
track who called whom. (And it probably unfortunately
isn't.)

The fact that this technique is just about, if not more effective than codebreaking for military use doesn't even occur to them in the context of being a bad thing. It's a way around the intent of the law, which to them is a good thing.

Just random thoughts

J.D. Sullivan, your excuses have worn very thin. You received the two radios over 4 months ago, but still you have not paid me for them.

After several telephone conversations in which you praised the equipment and promised to send the money, you now dodge my phone calls, ignore my requests for payment. You've got the radios, you love the radios, but you have failed to pay.

You said that you worked in law enforcement (Border Patrol ?) down in Harlingen, Texas, so I felt that you were a good risk. It appears that I mistook you for straigt up fellow. My mistake.

It is time to pay up now or return the radios.

I would guess the main advantage would be an antenna tuned to the 118-136 band. I saw someone with a Sony airband unit and noticed the duck was quite a bit longer than what you would normally see on a regular scanner. Then figure the circuitry is optimized (hopefully) without having to be *all freqs for all people*.

TDMA is the standard Bell South chose for their digital cellular systems.
An encryption layer could be added to it, but that isn't required (nor done).
So all your receiver has to be able to do is sort out which time slice belongs
to which phone call, and viola, plain old PCM. That might sound like a daunting
task, but it isn't since the control channel sends the call setup information in the
clear for all phones, ie not that different from the way trunking systems operate.
Otherwise it wouldn't be practical because there'd have to be a unique time slice
reserved for every phone, whether it was making a call or not.

I don't know much about how CDMA systems set up calls, but it seems to
me that call setup has to be in the clear with it also. Otherwise, how could
you roam? Both the phone and the base station have to have a way of
negotiating PN sequences in order to establish the call. That has to be
done in the clear, so it will work with any phone and any base station. So
any receiver monitoring will know what to do to follow the call.

Who is Bill Cheek, and why should I care about him ???

A reply to the group, and myself, would be appreciated.... ;)

All of the RadioShack scanners with 800 MHz coverage that have been built in the last few years have triple conversion receivers. All future scanners with 800 MHz from RadioShack will also have triple conversion. I would imagine that all 800 MHz scanners from all manufactures will have triple conversion now and in the future. The reason for this is that scanner manufactures have to prevent imaging of the cellular band.

Chris Smart <chris@uoguelph.ca> wrote in message news:7ppj8d$n3h$2@testinfo.uoguelph.ca...

It's called Multichannel Multi-point Distribion Service (MMDS).
MMDS is also known as "wireless cable". Go to your favorite
search engine and search for "wireless cable".

The two systems that I am aware of are:

TV West in New Mexico, http://www.tvwest.com/ and

Tele-TV in California, http://www.tele-tv.com/

the antenna needed for reception can be purchased
from Phillips-Tech Wireless Cable Electronics,

http://www.phillips-tech.com

1936. Re: Sales People at Radio Shack are pushy

Yes but most of the people posting on this board are not the "lowest common denominator". You guys and gals are experts in scanners, you know them inside and out, most of you are comfortable with circuit design, computer code etc... You cannot expect any retail store other than a specialty store (alas, there are fewer and fewer of them in this country) to be able to converse on your level of understanding. The fact is MOST people in this country can't hook up a DVD player to a TV with no A/V inputs. MOST people in this country are truly clueless about wireless phones. MOST people don't know the difference between a $19 cordless phone and a $149 cordless phone. People go to places like Wal-Mart, Target and other places and if they have any brain they are not satisfied by the point of purchase hype or box information. They come to us for real answers about things that they feel are important. That's not to diminish the thoughts on this board but frankly, only one person this year has called and asked me if I had a scanner that would do military aircraft. MOST people could care less about this but I told him the truth, I don't! We will have that back again this year. A lot of people on this board are dwelling on the past and can't see the future which is ever so complicated, so complicated that someone as dedicated to this job as myself has a hard time keeping up with it! Yeah, I can't draw you out a 555 timer circuit, I expect the customer that needs that to know what they are doing. I'll tell you what's the best mobile scanner antenna that I offer, by personal experience, but don't expect my new full-timer to be able to offer you that level of understanding. Like I said, the key to "You've got questions, we've got answers" is to reduce turnover. We've gotten much better in that respect but still have miles to go. Nonetheless we're competent as a overall team in answering MOST people's perplexing questions.

From: Hoppie <Hoppie@cgocable.net>
Message-ID: <37c0b96e.0@news.cgocable.net>
Source record: 109199

I am very new to this hobby I recently purchased a Pro-51 used, pre 7a4 so I have cell frequencies with the test mode. What my question is I use my scanner mostly in the basement, my office hehe and I want to rig up a better antenna for the 800 band. I have the telescopic for the lower bands, I have read in this ng that celluar antenna is good for this, the problem is here in Canada not alot of stores stock them anymore because the demand for them are diminished.
I went to crappy shack and they don't carry them, the adapters I suppose are home made.
Any suggestions on a certain antenna or home made rig, it would be greatly appreciated. Thanks from the very green Hoppie, this is a great hobby I sorry I didn't get into it earlier.

p.s also I was wondering is there anyway to save the cell frequencies with the Pro-51, you can listen is test mode but I can't save them to a channel, just wondering if there is a trick.

There a couple of things here.
1. Military aircraft band scanners are not in HIGH demand. Most people just want their local public service, could care less about other bands. Why build in a capability (read cost...) that very few people want?
2. Mr. Latham makes a valid point about imaging and cell phones. In this politically charged atmosphere we have had (read Newt Gingrich) there was a serious compromise that had to be made to make sure scanner enthusiasts were not oulaws in this country. A cooling off period if you will. You will notice that all these scanners are now triple conversion to eliminate embarrasing images. It's one of the costs of doing business in America today. Too much government meddling... The reality is that Radio Shack has to rely on FCC approval for so many of the products we sell that SOME compromise is necessary. If anyone enjoys a family radio service radio here should momentarily thank RS for that, while simultaneously cursing the government for being such nincompoops with scanners. You'll get your military band back in a new receiver, wait a few months.

1943. California State Fair Frequency list update updated

Newsgroup: rec.radio.scanner
Date: 1999-08-22 00:00:00 UTC
From: 'kaptain' <rapture@calweb.com>
Message-ID: <37c0c59c@calwebnnrp>
Source record: 109205

I can now add two more frequencies that I found today.

475.500 - seems to be for stage coordination, or maintanence, or something. They talked about getting performers to come to certain places, especially Pokerville Saloon stage, and also to fix the gates (East Gate, West Gate, etc.) of the park.

486.325 - food/drink supply. Employees at the stands will say the need ice or something, and some guy says he'll bring it. One of the places that calls in is the Ampitheater, which is where the headline concerts are.

'kaptain' <rapture@calweb.com> wrote in message news:37be236c@calwebnnrp...

Hi all, i have found this info below along with some "c" source code for converting T.M data into text messages , please
look into it if you are one of the groups "helpers" and let me know if you can make a win decode program with it ?. Do
not know the authenticity of this info but it seemed genuine enough ?.

did you know the new master cams read your number plate too !!

hmmmmm !

EAVSDROPPER

Transmission technical details

Frequency: 153.2750 MHz (FSK)

Format: POCSAG

Speed: 512 bps

RIC for data: 0901977

RIC for pager: (dependent upon serial number)

TRAFFICMASTER NEWS MESSAGE FORMAT

Type, Header/Count and Page are made up of the bits obtained when the first 3 characters of the message are decoded to
give 6 bit binary sequences.

The Text field is made up of the raw 7 bit ASCII characters received in the original message.

Checksum is obtained by decoding the last 3 characters of the message into raw binary.

The fields are have the these characteristics:

Type: 0110 binary 0x06 hex
Header/Content: 0 = header 1 = content
Page: 0 = weather 1
1 = date
2 = weather 2
3 = news 1
4 = news 2
5 = sport (Today's Weather)

(DATE)
(Tomorrow's Weather)
(NEWS FLASH)
(News Flash)
(Sports Flash)

Checksum = Type + Header/Content and Page taken as a single value + 7 bit ASCII character + ...

The page numbers given on the Trafficmaster are the values obtained from the Page field plus one. Default headings for
the pages are given above. They may (and frequently are) changed by sending messages with the Header/Content bit clear.

TRAFFICMASTER DATA FORMAT

The following are 3 example messages:

LYM4 J10-7 E/B CLSD: Chem spill4/.

/yeXfMudwhF6sAooBC67KcAV1654HVQ.

OUDry & sunny; cloudy later in NW ScotlandLess windy & feelingmildernSU

The first holds traffic information, the second traffic congestion arrows, and the third, weather news. Notice that the
textual messages have a couple of spurious looking characters at the start and end, whilst the rest is normal 7 bit
ASCII. These characters are actually binary data, as is all the data held in the arrow message.

Trafficmaster uses a coding form similar to base64. It takes raw binary data, segments it into 6 bit chunks and encodes
it into the following 7 bit ASCII chars: . / A-Z a-z. '.' being 0 and 'z' being 63. Importantly, the bit order of the
binary data obtained in this manner is opposite to that of the raw 7 bit ASCII.

Any <EOT> (hex 0x04) characters received at the end of a message should be stripped and ignored. They will have been
added by the paging system.

There are a number of distinct message types:

News Messages

Traffic Information Messages

Arrow Messages

Time and Arrow Messages

Each follows a similar format: a 4 bit field indicating the message type, the message content and finally a checksum.

At least the first character of each message must be decoded into a six bit binary word since the type information is in
binary. The checksum (assumed to be 16 bit) is also binary so the final part of the message must also be decoded into
binary.

The message content can be either binary (allowing the entire message to be decoded into 6 bit words) or 7 bit ASCII
text, as it is received in the message. The ASCII text is found in Traffic Information and News messages. It should be
noted that the text comes pre-formatted for the YQ. Each line can hold 20 characters. Where a word would overrun the end
of a line, extra spaces are inserted before hand to push it onto the next, or a hyphen is inserted. Where a word ends at
exactly the edge of the display no space is placed between it and the next word. There are often no spaces after
punctuation

"C" SOURCE CODE FOR CONVERTING TM DATA INTO MESSAGES

>This small (only 5" tall) antenna is sold by Radio Shack "catalog no. 17-322"
>to be used as a cellular antenna.

Why use that antenna when Tech America sells an antenna that works on three bands. (2 meters,70cm and cellular) This antenna is a mag. mount about 13 inches long and costs $29.95. I don't have this antenna yet but i am going to try it real soon. I will be either boasting or bitching about it's performance,but I will keep you posted.

For Sale

2 - RS Pro-62 200 Channel AM/FM Scanner with Ni-cads Batteries
$120.00 each

I'm in the Dallas/Fort Worth Area or willing
to mail COD.

E-mail me for more Info or if interested

PRO-62 Programmable Scanner
$120.00

--- Features ---

Frequency Range:
30-54, 118-136.975 AM, 137-174, 380-512,
806-824, 849-869, 894-960MHz

Triple Conversion Superheterodyne Tuning -
virtually eliminates intermediate frequency imaging
interference (common to 800 MHz dual conversion receivers)
so you can clearly hear only the scanner's received frequency.

Hyperscan - searches through unstored frequencies at 50
steps per second or scans stored channels at 25 channels
per second.

Monitor Memory - lets you temporarily save up to ten
frequencies you find during a frequency search so you
can decide later if you want to store any of them into
permanent channels.

Two-Second Scan Delay - delays scanning for about two seconds
before moving to another channel so you can hear more replies.

Ten Channel Storage Banks - let you store 20 channels in each
of 10 storage banks to group frequencies so you can easily
identify calls.

Liquid-Crystal Display - shows the selected channel and
frequency and the selected modes.

Memory Backup - protects the stations stored in your
scanner's memory for up to 1 hour without the battery.

Lockout Function - lets you set your scanner to skip over
specified channels.

Keylock - prevents you from accidentally changing the
scanner's programming.

Priority Channel - lets you designate a channel to
be scanned every two seconds so you do not miss
important calls.

AM/FM Mode - automatically selects the most common
reception type for the band you are scanning, and
lets you override the default selection.

Battery-Saving Circuit - draws only 40% of the normal power.

Optional Power Sources - let you power the scanner from
internal batteries, standard AC power, or from your
vehicle's battery.

Ni-Cad Battery Charging Circuit - lets you recharge
nickel-cadmium batteries while they are inside the
battery compartment.

--- Basic Specifications ---

Scanning Rate ..... 25 Channels/Sec.
Search Rate ..... 50 Steps/Sec.
Priority Sampling ..... 2 seconds
Delay Time ..... 2 seconds
Antenna Impedance ..... 50 ohms
Power Requirement ..... +9 VDC, 6 AA batteries or a suitable
adapter (negative ground only)
Current Drain ..... 95 mA
Dimensions ..... 5.75H x 2.25W x 1.75D inches
Weight ..... Approx. 8.8 oz (250g)
(w/out ant. and batt.)

Hello Chuck,

I don't have any technical info to add, just a bit about timeframe of release.
I visited my local RS today to see if the new catalog had made it to them yet.
They told me to come back in about 7 days... which I will. I then asked when
the new trunking scanners were due in. They told me around Jan 2000. I don't
know if anyone else has obtained any dates from other RS outlets. That's about
it.... not much but you asked for info... wish I had more to share.
Have a good one !

Wrong type scanner. This is radio channel scanning, not computer graphics
scanning. The manyfacturer of your scanner should be able to supply you
with either the software or a suggestion.

Could anyone direct me to a reliable source (internet) where I could research the term(s) that Radio Shack advertises with their new pro-92 model. The term used (in the 2000 Answers catalog) says: CTCSS/DSC decode and cloning interface. I do not see this feature advertised with the other new model (pro-94). Both are handheld scaners.

Can you people understand that the Radio Shack is in the same retail business as a Target or a Wal-Mart etc... and with that comes incessant turnover. NO, you can't expect a sales associate that's been aboard for 6 months to respond postively when you throw out the question of a battery for a PRO-64. Can you go to Wal-Mart the next day after a purchase and expect someone to help you out with a question about your purchase?? Not likely. They will probably offer you an exchange or a refund but no real information. Personally I would love it if we were all capable of finding your answer within 5 minutes, but it's NOT REALITY!
Let's think about this for a moment, we have 3,000 items in inventory right now, this stuff changes almost EVERY DAY! Now, if you have a 3 year old scanner and you want a battery for it and it's not a current item then it's gonna take some time to find the info. A phone call to product support is the slowest way, a lookup on the CD ROMs provided by the company is the best way (unfortunately most stores lose those ;-(). The other way is to get the big spiral bound book out and try to find this stuff.
To please you we have to reduce turnover, there is no substitute for experience in such a complex business. We are working on that but the change is going to take time. Since you're on the internet already use the radioshack.com site to find some of your info. Don't beat us up for doing the things that will keep us alive in this industry. It will get better in the future.
David Deines

Hi,

The text I am sending is off topic - apologies - but it is relevant I guess ....

>did you know the new master cams read your number plate too !!

Subject: Speed cameras.

If you always stick to the speed limit then please delete this note.

Is everyone still reading?

The message below came from a contact at Rover. Taking note could help
you keep your driving licence.

Speedcheck SVVD or SPECS went online last weekend on the M1, netting
4,300 offenders in a single day. The system does not use instantaneous speed
like the cameras we're all familiar with, instead measuring the average
speed of every vehicle over a distance of about a mile. How? By reading
your license plates and matching them up camera-to-camera. Kent and
Leicestershire police are so impressed with it that systems are being
erected in their enforcement areas too. This is a new system which has
now entered service after successful trials on the M1 and M20 in the UK.

Speedcheck SVDD (Sureway Video Detection Device) is a system similar in
concept to the GATSO, but with a new twist. SVDD deploys cameras at
either end of a measured baseline (up to 500 metres) to monitor vehicles 24
hours a day. Using machine vision, vehicle numberplates are read, and the
precise time of each observation recorded and as a vehicle passes the
second camera, the numberplate records are matched, and an average speed
for the vehicle is calculated. If this is above the trigger speed, then
the vehicle's identification is recorded along with it's speed. It is
also flashed up on a huge illuminated sign further down the road to
embarrass the driver into slowing down. When triggered, the detection
technology used in these cameras automatically records the date, precise time,
location and speed of the offending vehicle, along with a full colour
image of the front of the vehicle, which clearly records the numberplate,
make, model and colour of vehicle. There's five overriding reasons for
the habitual speeder to be afraid of this system: It works 24 hours a day,
needs no film, uses no flash, and uses no radar....so bad luck all those
of you who think that radar detectors work. It's been proven to be over
99% accurate in almost all weather conditions. It doesn't do spot-speed
checking. A GATSO can only check the speed of a vehicle within a certain
range so the tactic most drivers use now is to slow down for the camera

and then speed up again once past it. Speedcheck measures average speed over a known distance. So if you do 60mph under each camera and then speed up to 80mph in between, your average speed is likely to be near 70mph - 10 over the limit imposed - you're nicked. SVDD say this means that the system can impose a far smoother flow of because it's automated, the system is entirely self-sufficient. It's hooked up to the DVLA computers, and can automatically process the fines and send out notices in the post. It's Big Brother. Don't believe for a moment that this technology will only be used to catch speeders. It could eventually be used to keep track of where every single car in the country is at any given moment in time once the network of these things becomes broad enough.

Warning to M25 Motorists If you are a driver then this is important! Even if you aren't you know people who are, so it is still important! Please pass this one on to as many people as you can. There are 60 new cameras that started operating on the M25 on Monday 14June. These are between the A3 and M40. They are digital and linked direct to computer, use no film or flashgun. They can deal with 60,000 tickets EVERY HOUR. The cameras are also (apparently) linked and can work out your average speed between them. So, if you speed up between them and slow down as you approach them, if your average speed is over the "legal limit+N%" threshold you may well get a ticket. See web sites below.

I live here in Ft.Worth where the headquarters is of Radio Shack and they
got the Catalogs in Wednesday.The Pro-94 (20-524) is listed in their
Computers as a stock item but they do not have any in stock.Sometimes this
week the Pro-94 goes on sale down here,but the Pro-92(20-522) will not go
on sale until late September or early October.As far as the Pro-2052 I have
no idea.

That's what you get for using a browser instead of a real FTP client.

The third file IS there - it is named an31c3.aip and NOT an31a3.zip

I got all three, installs fine, crack works fine. Thanks Odo!

What software is everyone using with airnav. I use wacars and it seems to have a lot of errors. I use it to get the message log for airnav and have only gotten a few position messages compared to all the other messages. Is there a better program? Also is there a program that makes use of the discriminator tap instead of the soundcard?
Thanks.

acars is AM so no discrim tap can be done really , krakars is a bit better at decoding but it's dos , if you want better
signal decode you will have to purchase a commercial package.
personally i have no problem with wacars t decodes well once you have it tuned right ...and thats the fun bit !!

>My thoughts are that the radio has somehow been "put to sleep" by sitting for
>several days with a completely dead battery pack (and thus, no power to the
>memory.) Is there a keyboard sequence to reset and "wake up" the radio again?

Open the unit up and check the 2X8 AMP headder connector which
attaches the CPU side of the unit to the radio side of the scanner.
My 200x had the same symptoms and it turned out to be the connector
(internally) seperated slightly from years of uss and vibration.

In a nutshell, I tightened things up a bit inside via 1/8th of a turn
on the phillips screws that hold the radio together, and a cleaning
with non-residual cleaner and all was OK. Just one caution, DO NOT
tamper withthe LCD assy. Connections to it are very delicate and
easily damaged. stay away from the LCD and you'll be OK.

I wish to thank all of you who have forwarded me your
nice comments, both on the newsgroup and in e-mails
concerning my "Adventures of Scanner Dweeb" comic strip.

He has turned out to be a very popular fellow as the number
of visitors to the page continues to climb. For this I again
Thank You. So far I've produced 18 episodes that I have put
on the page with more to come. Some new ones are already
completed and just waiting to be updated... and there are more
ideas I have on paper but have not drawn yet.
Scanner Dweebs mother finally will appear in the 25 Aug episode.
So far she has been nothing more than a voice from outside
the frame. Be looking for her this week..... Also expect to
see new characters in the future.
Again.... Thank you very much for showing an interest in
The Adventures of Scanner Dweeb.
http://members.aol.com/scanshack/sdweeb.htm
And thank you for your support in the hobby of radio scanning !

Wal-Mart and Target do NOT advertise that they are technically knowledgeable.
They also do not employ robotic sales drones who follow you around the store
and attempt to convince you that they know their merchandise (so they can sell
you something of high markup that you do not need.) That's the difference.

If the superpowers in Fort Worth want to run Radio Shack as a
lowest-common-denominator, self-service retail store, fine. Just quit
misleading people by telling them that "We've got answers!"

Note: this address does not accept unsolicited e-mail. Please contain all
discussion regarding USENET posts to the appropriate newsgroup thread.

1993. San Jose, CA PD Freqs?

Newsgroup: rec.radio.scanner

Can anyone point me towards on on-line source for these freqs? I haven't had their new channels and area assignments since they re-mapped the area/beat structure a few months ago.

Both web pages that I have bookmarked for Santa Clara County freqs still show the old channels/area assignments...

TIA....

One of the major things RS pounds into its employees is knowing the products.
My RS boss in 1985, had me write a little one page summary of any product I wanted to, every few
days, that way I really knew what I was talking about instead of spewing spit from my oral hole.
In my area, the reason we stuck to people and watched them real close is not because we were pushy
and wanted to serve them, but because 1 out of 4 people browsing the store were in there to steal little
parts instead of buy anything.

1995. Spectrum Analyzer information needed.

Newsgroup: rec.radio.scanner
Date: 1999-08-22 00:00:00 UTC
From: Charles Tomaras <tomaras@tomaras.com>
Message-ID: <7pp7to$9p1$1@q.seanet.com>
Source record: 109299

I'm a scanner newbie and would appreciate some help. Here is my situation:

I work as a location sound mixer for network newsmagazine shows like Dateline, 48 Hours etc. I
travel to many different communities and work with frequency agile RF microphones that operate
in the UHF spectrum. With the onslaught of HDTV stations and other RF interference the time has come to get some test equipment to allow me to quickly ascertain open freqs in the different cities I work in. I naively purchased a new Sony Wavehawk ICF-SC1PC 300 channel scanner that I can use to scan the frequency space that my RF mics operate in but think that I
may want to purchase a Spectrum Analyser as well.

I notice the advertisements for scanners alway talk about them working in conjunction with receivers. Is this mandatory for spectrum analysis, or is this just a way of quickly tuning to
the frequencies that are found for listening? Would my ICF-SC1PC connect to these devices through its serial port?

What is the most portable and useful spectrum analyser out there? Is there a DC/battery powered
one available? Hand Held? Maybe a PCMCIA card/software version that would work with a laptop
PC?

The areas that are most important to me are from about 450mhz up to 1000mhz.

Thanks for your suggestions.

I say give me a trunking only scanner.
Those of us interested in scanning already have scanners that cover all the bands.
I say give me one with the trunking bands only.
No boats, no trains, no low band, no aircraft...etc.
Less intermod and all the bad things that plague a radio trying to be all things to all people.I say trunking only....what do you say?

These frequencies are Amateur Radio HF frequencies and can be heard elsewhere, depending upon propagation, power output of the stations and your receiving setup.

I have worked into Texas and other southern states on these bands from
Washington so I guess the answeer is yes depending on the time of day and
propagation.

2002. Virtual downconversion possible on BC895XLT!

Newsgroup: rec.radio.scanner
Date: 1999-08-22 00:00:00 UTC
From: chiblet@earthlink.net
Message-ID: <37C037C3.4346D49B@earthlink.net>
Source record: 109306

Dear Newsgroup.

I came across a blurb on the Scan Shack page which tells how the Uniden

BC895XLT can be modified using the virtual downconversion technique. It was written by Steve Donnell, so it's got to be the real deal!

It's a pretty simplistic mod as most VDC mods go, yet I don't dare tackle it without a
service manual.

It basically entails activating the 800MHZ filters and providing manual switching between AM and FM.

If anyone has done the mod or has leads to a service manual, I'd greatly appreciate hearing some feedback from you.

Thank You

David Lovering

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling 1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped) for 1 to 10 issues. If you are interested in over 10 issues or the entire collection, make me an offer. I am willing to ship anywhere on this planet so long as you are willing to pay the actual shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Dec $1.00 ea.
1994 Jan - Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea.
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.

Doug,

As a start, you can get the new channel assignments from SJPD itself:

http://www.sjpd.org/frequencies.html

I don't know if this is on-line anywhere, but here's a list with more
information:

District & Beat/Other Ch. Freq. Tone

Western Dist D F & R 1 460.150 131.8
Western Dist N & S 2 460.275 162.2
Foothill Dist M & W 3 460.200 136.5
Foothill Dist C & P 4 460.425 167.9
Central Dist K & V 5 460.400 146.2
Central Dist E & L 6 460.325 146.2
Southern Dist A & T 7 460.475 136.5
Southern Dist X & Y 8 460.525 179.9
Citywide 1 9 460.100 136.5
CLEMARS 10 460.025 179.9
Citywide 2 11 460.050 110.9
CLEMARS Direct 12 460.025 179.9
Tactical 1 13 460.175 186.2
Tactical 2 14 460.300 203.5
Tactical 3 15 460.375 203.5
Citywide 1 Direct 16 460.100 136.5

Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

I have an AR1000 that hasn't been used for a couple of years and now some of the buttons on the keypad are not working very well. They weren't working at all at first so I took the keypad apart and cleaned the contacts off with alcohol (the keypad has the rubbery conductors like most calculators do). Some of the buttons work fine, others need alot of pressure, and still others do not work at all. Does anyone know the best way to clean the contacts so that their conductivity is restored.

Any help would be greatly appreciated.

Hey Bill,

I think you may be refering to Iridium, the satellite-based phone system that is currently experiencing financial problems. Inmarsat is a voice/fax/data used primarily by ships (INternational MARitime SATellite), and has nothing to do with Iridium.

Why not buy an ICOM PCR-1000 and use the bandscope function for your spectrum analyzer with some 3rd party software, like SCANCAT (Yuk) to do what you want. This would keep the cost around $400 and still you would have both the wideband scanner and the ability to look at a wide area of the frequency band for signals, interference etc.

basically what it will do is allow you to use "PL" tones with the frequency. Many agencies will use a PL tone to keep their communications separate from a nearby agency on the same frequency. Uniden's BC895, 9000, 8500 (and a couple others I believe) have this feature, the Relm HS200 and MS200 also have it. Radio Shack has finally jumped on the bandwagon and incorporated the feature into the Pro92.

CTCSS stands for "continuous tone coded squelch system", sometimes referred to PL or "private line". CTCSS is a squelch system that sends a constant sub-audible tone (roughly 67-210 Hz) along with the regular transmission. If a reciever programmed for this squelch tone hears the tone then squelch is opened and the transmission is heard. This allows the user to filter out interference and other undesired garbage that might be on the frequency. If theres no CTCSS tone then squelch stays closed.

DSC stands for "digital squelch code" and serves the same purpose as CTCSS but there is just a short burst (or an ID if you will) at the begining of the transmission. If the reciever hears the appropriate tone then squelch is opened.

Until recently scanners did not have PL capability so you heard everything on the frequency, and then some. Now you will have the ability to separate services that may use the same frequency.

In my area for example the CHP uses the same frequency for the Santa Ana Dispatch Center as they do the Ventura Dispatch Center but each uses a different CTCSS or PL tone. I can now simply change the tone in my scanner to switch between offices or enter the frequency in 2 different memory positions and use the appropriate PL tone for each office.

I hope this helps you understand this wonderful feature.

I'm looking for the Boeing security / operations freqs in use for the Mesa, Arizona plant? I believe they are on a 800mhz trunked system.

Also, if anyone knows the freqs for their other US plants please post them!

Thanks!

Hi,

I am setting up a a website to list all frequencies around the Calgary, Alberta area. It seems that there are a couple of lists on the net, but they are terribly outdated. I am attempting to make my new site as thourough, up-to-date and accurate as possible. So, if you live in the Calgary area, I would greatly appreciate it if you would send me a list of frequencies that you can recieve (or your favorites). I would prefer if you emailed instead of posted to the newsgroup.

The site will be at: http://members1.visualcities.com/bad_cops/

Thanks in advance.

Folks,
If anyone is interested in the definitive list of NYPD precinct frequencies, I have posted a verified list.
Although the new plan has been documented elsewhere, the actual NYPD implementation differs for some of the precincts.

I have created this list through actual monitoring: http://bsartist.com/Radio/nypdpct.htm so this *may* be the most accurate list yet posted.

Enjoy. For those of you with ARC8200, there's a mem file there for you to download.

It is only a matter of time before digital scanners hit the market.
First, the FCC must adopt APCO as a standard (hasn't yet)
before scanner manufacturers are willing to take the next step.
Until then, you'll have to find something else to monitor. :-(

From: Gerald <nospam@somewhere.net>
Message-ID: <37C11AFC.9CA10DB9@somewhere.net>
Source record: 109092

BTW, to scan:
The 5 brown buttons marked 10, 20, 30, 40, and 50 represent the freqs
you've programmed. 10 is 1-10, 20 is 11-20, 30 is 21-30, etc. When you
press the brown buttons, you will see a dot (".") toggle on and off.
Each brown button has its "own" dot. If all dots are off and you press
SCAN, the first dot representing freqs 1-10 will toggle on and you
will be scanning your first 10 freqs. Otherwise, whatever dots are
"on" will be the ranges of freqs you are scanning.

You can "lockout" a particular freq by manually selecting the channel
(e.g., 18 MANUAL) and pressing the LOCKOUT button (this button is also
a toggle). You will see an L appear after the channel (e.g., 18 L).
You can toggle the "delay" in a similar manner and you will see a d
appear after the channel (e.g., 18dL).

Message-ID: <rs29gjo25u254@corp.supernews.com>
Source record: 109093

Hi, Hoppie, welcome to scanning!

Unless you are in a fringe area, you will get good 800 MHz reception using almost any antenna designed for VHF or UHF use. For 15 years I have used the simplest design, an 18" ground-plane like the ones offered at Radio Shack, Grove Enterprises, MFJ, AEA, and many others. For travel I built a folding model from Romex wire, coaxial cable, and two connectors. The plans are in the ARRL amateur radio Handbook, which you should be able to find at your local library.

The benefit of larger and more specialized antenna designs is realized at the other extreme of the scanner spectrum (30-50 MHz) and where weak signals are of particular interest. For these there are many good online references to antennas and antenna building projects. A great place to start is Rich Wells' Strong Signals Resource Page, including his review of scanner base antennas at http://www.strongsignals.net/htm/rev_bant.htm

Now, if you're looking for a really high-performance antenna on 500-900 MHz, it's hard to beat an old fashioned corner reflector UHF TV antenna, turned 90 degrees for vertical polarization. Like all directional antennas, though, you'll probably need a means to rotate it. There's no end to ideas for interesting antenna projects!

Good listening!
Charley_Harp@alum.calberkeley.org

Just a hunch, but perhaps the function of SECURITY at that facility is handled by a contract entity,e.g. a private firm that provides industrial security. If you live near there, why not simply reconiter the facility.....drive up to the gate and act lost or something. Note if the rentacops have the name of a guard service on their uniforms. Or, act like, God forbid, you want to work there and ask one of the guys where and who to apply to.
Then, take the name and look on the database.
GOOD LUCK!

Hi, Sooung,

1) "Rubber Ducky" usually refers to a purely helical antenna design. It's just a flexible coil of wire within a rubber tube. They work OK over a surprisingly wide range of frequencies. There are other flexible antenna designs, far more complex than the Ducky, but not necesarilly better for your needs.

2) The only portable directional antennas I've ever seen are at Dayton Hamvention. There you can see and buy four-element cubical quad antennas for 440 MHz attached to plastic hard hats. I've built and used handheld multi-element arrays for direction finding, but that's not what you had in mind, I don't think.

3) I'm not familiar with that model, and the web page doesn't give any details. My advice: be sure to read carefully the (surprising) results from Rich Wells' comparisons of handheld scanner antennas at http://www.strongsignals.net/htm/rev_hant.htm

4) Within a metal-frame building, frequencies below a certain range are essentially blocked by the metal structure, and RF enter through windows better than walls. Higher frequencies get through walls somewhat better. Chances are that window mounting does improve reception (in that direction) of VHF signals.

5) I have a similar window clip, and it performs as advertised. Getting the antenna outside the vehicle not only improves the reception of signals, but also helps keep automotive RF out of the scanner. My portable scanners are unusuable on some frequencies inside my car because of all the ambient RF.

Good listening!

I myself have both, an air band only radio (WIN-108) and a PRO-43. I personally use the PRO-43 more often then the 108. I would say the most important element with a radio is to ensure your using a good antenna and that the radio is triple conversion. I find that the PRO-43 performs very well on the aviation bands. Keep in mind that there is also a UHF aero band (allbeit Military) but nevertheless every airband only scanner I've seen won't have this, yet your PRO-43 does!! If you are new to the hobby you may eventually want to monitor other bands and with an air band only radio you'll then have to purchase something else, with a radio such as the PRO-43 your all set.

Just my opinion.

Cheers,

Naw, never sold insurance... I definately don't have the heart for
that. Or lack of one. That can be one brutal industry.

I think with any kind of insurance it's again the question of does it
give you an advantage at a price you're willing to pay. Just like some
people still run 386 machines (I keep cad on one, and another 386
laptop for packet) and it give me a lot for what I'm willing to pay.
Sure, a new wizbang Pentium III would be nice, but I'm NOT willing
to pay, at least yet. (I do have other machines than those, so I'm
not a computer cripple!)

2055. ### VISAR PROGRAMMING QUESTIONS

Newsgroup: rec.radio.scanner
Date: 1999-08-23 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19990823123422.00374.00005508@ng-cg1.aol.com>
Source record: 109109

I just got a new Motorola Visar radio, version 4.5 (or maybe it's 4.6...) I have two other Visars, both version 2.5 I believe, and both are programmed fine and working. However when I program the new visar to scan, it doesn't work.

When I hit the top side button (Which is programmed to "Scan On/Off / Scan Prog") it gives me the little icon on the screen acting like it's scanning, but it doesn't unmute the speaker to ANY audio. Now, if I hit the second side button (which is programmed to "Monitor/Scan Prog. Status") it will temporarily unmute the audio for about 3 seconds and I can hear activity on that channel, but then it goes back off.

I can hear all of the channels fine when not in scan mode, but as soon as I put it into scanning mode, it shuts off the receiving audio and won't open to any channels.

Now, I programmed this radio with the exact same settings as the other Visars, and they are all working fine... This one is new out of the box so I'm pretty sure it's working as well. I'm wondering if this one is just more selective about the programming options or something since it's a different radio software version.

Has anyone had this problem before, and can you tell me where the setting in the programming software would be so I can correct it?

I appreciate any responses and thank you for reading this. Please email PDFDISP@aol.com with any info. Thanks!

The Yupiteru 225 is an airband scanner that covers both the civilian and military airbands and includes the new international step size of 8.33kHz. This radio outperforms any general purpose scanner I've ever seen, including the AR8200. The RF detector is a dedicated AM circuit and the audio is clearer than the AM audio on other scanners.
There are two problems, however. One, the radio isn't sold in the US, so you must purchase it overseas (Javiation is a good source.); and two, the cost, at more than $400 once shipping and Customs duty are added.
If aviation is really your "thing" it's probably worth the money.

Hey, Mackey - GET A LIFE YOU LOSER! I am not taking any sides here, but at least I have seen more on topic posts from Phil then I have you. But then again, what do you expect from a self centered, ignorant, abused by his father, lying, god complexed, clown? I thought so. John, for 1999, you have made of 500 off topic posts to this group. Phil has made 42. Now, neither of you are right, but you know what, who cares? This ng has turned into nothing but a flame group and a for sale/ for auction group. Don't bother replying, because I am not sticking around for one. This is my first, last, and only post to this group for 1999. It is a real shame, because this ng used to be a good place for information. Now, I can get better information by talking to a brick wall!!! I am sorry to see all of you fall into the pit of darkness that this newsgroup has become.

Now for some parting words -

Phil Smalley - Practice what you preach. Your off topic posts destroys your credibility (ok, the mini-me pic was funny!). You give a lot of good advice, but the crap is killing you.

Bill Conduit - Post in normal English. Your semi-poetic prose is enough to make someone want to drink and drive.

Bill Cheek - You got everything that is do to you. No love lost here. Hope you rot.

Scan Shack - This is not a place to promote your cartoons. Give it up already.

Pozilla Software - Stop hawking your software here. Nobody really wants to buy your crap.

Evesdropper - It because of people like you that our rights are being stripped away. The scanner community is suffering greatly from your actions.

Zombie Wolf - You whiney little {censored}. Again, like Phil, when you post off topic or flame, it destroys your credibility. Why don't you mind your business and stick to what you do best. The info you do provide is great, stop picking out others faults until you, yourself, is 200% perfect. Since that will never happen, well, you know what to do.

Mackey - get a life, move out of your parents basement, quit McDonald's, get a girlfriend, and get a real job, start posting only on topic, and maybe you will get the respect that you so long for and desire. In the mean time

To everyone who is asking for cell mods - GET OVER IT! It is not going to happen any more. Furthermore, it is illegal. And if you keep pissing off the US Gov't, they will be sure to outlaw scanners and scanning altogether! What you don't think they don't monitor the ng's? Right......

To everyone who thinks it is necessary to flame someone for having their own opinion - GROW UP! Everyone is entitled to their own opinion, and the great thing is you do not have to agree with them. But flaming them is a waste of time and energy. If you people put half of the energy it takes into doing something constructive instead of flaming, well, the world (of this ng) would be a better place.

And, finally, to everyone who has a FS or FA post - TRY REC.RADIO.SWAP you ignorant fools! This is not a for sale or for auction ng, but then again, it seems like everyone on this planet has forgetten how to read or follow the rules.

I am stepping off of my soap box now. As Dennis Miller says - "This is my opinion, and I might be wrong". But you know what, I don't care.

Good luck to all of you, as I am now unsubscribing to this ng. May you all find peace in your pathetic little lives.

Fred

I have an Icom PCR1000 that offers a "band scope" function that is "like" Spectrum Analyser. But it is not the real thing.
The place where I work has an older Textronics 2754 real Spectrum Analyser. The 2754 is much more usefull in finding new/unknown frequencies. Since a picture is worth a thosand words, I really can not complety explain what I am seeing, I suggest you make friends with a someone in either the broadcast industry or at a 2-way radio shop. And get them to show you just what a good Spectrum Analyser can do.
Our unit was expensive ($35 US) and I have seen them in working, but uncalibrated for less than $500(US) at the Dayton ham feast. There are smaller units that are designed for the TVRO business but they are not all that good for anything other than setting up a sat dish, or tracking down interence.
Do not get me wrong, the band scan is a nice feature, but it is a long way from being a real Spectrum Analyser. For your intended application it should do a farily good job of displaying the (fairly) constant garbage from HD TV.
I have never had a chance to see the Sony, but I suspect that it is somewhat like the PCR1000. The bigest problem is that you can only "see" a 400KHz slice of the band at a whack, and it will take all day to study several MHz.
A Spectrum Analyser will allow you to set display limits to nearly any desired spread you want. And you can move a cursor over a spike and zoom in by reducing the freq/devision ratio.
Some modern high end Spectrum Analysers have an on board audio system so you can listen to what you are seeing, and a few even have a video section so you can look at a TV signal as a TV picture instead of a wide spike.
Good luck.

2064. Re: Keypad problems on AR1000 scanner

Newsgroup: rec.radio.scanner

Source record: 109118
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

I've restored my AR1000 keypad by using a rubber pencil eraser and VERY lightly scrubbing down both the keypad and the keypad board contacts to break down any glaze. Then, using lock graphite, rubbing graphite into both the pad contacts and the board contacts. This isn't perfect, but it will restore functionality for a while. I'm wondering if there is a conductive silicone grease that might be better than the graphite.

Hi to all, i need info about the Marconi TF995a Signal generator
and the
HF1065a Output testset.
ANNY info/photo's or anny info at all is welcome i would be a happy
man if
i found the users manuel of even the service manuel, i tried to find
annythi
ng even the internet but no succes not even a photo or something.
I need to know how to recalibrate the thing, how do i charge the
batary of
the 1065 ? what freq specs does it have ?

Is there annyone out there who can help me ??

All methods that do not replace the worn conductive elastomer layer on the buttons will provide only temporary results, in any. Rubbing alcohol on the worn rubber contacts themselves is probably the **WORST** thing you can do, because it simply removes what little conductive material still remains.

You must buy a repair kit (usually containing compound and an activator) which you mix together and apply to the worn rubber contacts. Repair houses like http://www.mcmelectronics.com or http://www.sandman.com usually carry these - they are not cheap.

Does scancat allow you to "look" at greater than 400KHz segments in the
bandscope mode?
While I love my PCR1000, and find it suits my needs, I am not at all sure
it will substitute for a real Spectrum Analyser.
YMMV

Call setup has to be done in the clear. But once the base and mobile have
established communications, they could switch to passing encrypted data,
using encryption that depends on some information stored in the phone
and the switch but never transmitted over the air. An eavesdropper wouldn't
be able to decode this data, at least not easily. Once the encrypted
channel is established, the base and mobile might agree to change
frequencies or PN sequences, making the original values negotiated during
call setup useless for further listening.

I'm not implying that anyone does it exactly this way, but it *is* possible
to provide pretty good security through encryption. Simply using digital
modulation provides no real security.

Remember the movie "Predator"?
Here's another high tech gadget easily outfoxed by the clever application of
"mud"

No doubt some sort of OCR algorithm is in use to read the offender's plates
(or else where would you send the ticket?)

So take some mud, clay, bubble gum, etc. and put it on the plate in just
enough spots to make your plate unreadable by an OCR program and voila!
Problem solved. Unless it starts to rain, LOL...

I wonder how soon it will be before this sort of thing happens in the "land
of the free" over here...

2075. Lowe HF-225/E Repair Solution

Newsgroup: rec.radio.scanner
Date: 1999-08-23 00:00:00 UTC
From: wa4hhg@amsat.org
Message-ID: <37c5b239.23396585@news.erols.com>
Source record: 109129
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner

I have an HF-225/EUROPA which failed due to a near lightning strike.
The symptom was no receive on frequencies under approximately 16 mhz.

A quick call to the "Lowe Workshop," a description of the problem and
they knew exactly what the failure was. The switching diodes in the
front end bandpass filters also steer the VCO tuning voltages. The
lightning stroke had caused the switching diodes D1 and D2 to short.

To replace the defective diodes, remove the top and bottom of the
receiver case being sure to unplug the speaker from the main chassis.
Next, remove the 1-1/2" X 2-1/2" steel shield located on top the
board, near the edge by unsoldering the 4 points. The diodes, their
coils and capacitors are all located in plain sight, under this shield
on the main board.

With a DVM set to diode function, test all the diodes under the shield
front to back. The proper cathode to anode voltage drop should be
about 0.730V. Note all of those which deviate grossly from this
specification for replacement.

Unsolder the defective diodes from the bottom and as the board is a
double side design with pate-throughs, make sure the solder has also
been removed from the top side of the board.

Replace the defective diodes with BA244, 1SS135 or like-spec, RF high
speed switching diodes. I chose the 1SS135 diodes which are available
from Kenwood Parts @ $1.95 ea, (800) 421-5080. Thanks to Universal
Shortwave (800) 431-3939 and Lowe Electronics, LTD (UK) 011 441 629
580-800 for their help and saving me time and an expensive trip to
Derbyshire for repair of my HF-225/EUROPA which has been in daily use
for 4 years.

True, but the original poster did us all a favor by alerting us to a potential ripoff. Now we know if this JD guy wants to buy a radio, send it COD or request payment first.

The internet is full of scammers and con-men waiting to take your money. While I don't know 100% if JD is guilty of that or not, at least we know to be a bit more careful in future dealings with him. The fact that he hasn't posted a reply to this thread defending his position doesn't speak too highly of his credibility as a purchaser, IMHO. Again, that's up to him, and I'm not saying he's guilty or innocent.

Taking someone to court, especially across state lines, is expensive. The guy's just trying to get what's owed to him without a bunch of BS hassles and court costs. I probably would have done the same in his place. Thanks "LEADENWAH" for the tip.

>cordless phone.

There you have it in a nutshell, and I've said it before. We are a minority compared to the number of cell-phone toting, dvd watching, VCR movie renting public. (That's why we got the ECPA of 1988 shoved right square up our collective - ahem... 'nuff said)

I personally have my likes and dislikes with RS. I like the hours of operations and the fact that I can pretty much rely on them to have whatever weird gadget I need for project such-and-such. Because I know enough about electronics to be semi-dangerous, I was able to find a car adapter for my camcorder there for about $15, by comparing the voltage and MA settings listed on the unit to what the battery on my camera puts out. This compared to the $79 special order one I could get from the back of the manual for it.

What I don't care for is being offered a cell phone when mine is already fastened securely to my belt, and having to remind the new kid working there to give me my receipt. I don't expect this kid to last long BTW because the manager gave him the "look" when he heard me ask for it. Good. Won't miss that kid...

But I've been on both sides of the fence, I've dealt with the small stores for years, and also recently had the opportunity to meet with the folks at Fort Worth who run the whole thing. Overall, Tandy is a good organization with a good reputation in the industry and they treat their vendors well. Much worse has been said about Wal-Mart, K-mart and the others. I've heard introducing a new product to WalMart and actually getting a P.O. for it is like pulling teeth out of an angry tiger. My recent experience with Tandy however was very positive and encouraging.

Dave, you sound like you are a manager there at RS? Your input to both us and your employees on our behalf is very valuable IMHO. Don't let the naysayers chase you off! You're certainly welcome here, in my book!

Thanks,
-Phil

Big difference if you figure in the CTCSS/DCS, Alpha Tagging and "AA"
battery capabilities. Otherwise probably not a whole lot different.

From the looks of things that I've seen posted online, I think the better scanner depends on what you intend to do with it, and how much you can afford to spend.

For me, computer control is my bag, so I think the 245 is better in this arena (I've heard that the 92 will only upload/download frequencies ala PRO-64) But for strictly mobile use, a PRO-92 user has it made. 500 channels and alpha tags (A TWO LINE alpha, I believe, one line being an agency and the other being channel designator! Sweet....)

Trunking methods are also a consideration. If all you listen to is Motorola systems, you might be disappointed with the GRE units as they don't make use of the data channel the way the 235/245 does. GRE's trunktrackers use sub audible tones to follow converations which makes them slower than the Unidens. But the advantage to using tones is that the private calls and phone patches can be tracked! (So I've heard from Optocom users, which the pro 92 seems to be most like.)

Also price is a big consideration. With the BC-245 you get everything in one box for around $230 to $250 depending on where you buy. Cable and scanner inclusive. With the PRO 92, you spend easily $100 more and still don't have the required cable to make full use of the scanner! That was a disappointing read....

So again, which is better depends on what you want it for. If you need alpha tagging on a EF Johnson system, the 92 is the only game in town. If all you have is Motorola type II to listen to though and alpha tags don't mean a whole lot to you then the 92 is just a slower, more expensive unit. If you only have $250 or so to spend and need the computer functionality, then you're limited to the 245. If the sky's the limit, you can go for both! You may want mil-air coverage, in which case you can't use either one of them! It's impossible to determine with one blanket statement which scanner "fits" a person better. It's up to you to decide for yourself.

Look, I don't have any of their packs but I'll tell you this. Don't buy from them and hopefully you didn't pay much for what you got off e-bay. They are selling 6cell "super packs" (just the batteries for you to put in) for over 20 bux. He's getting those cells at something like $1.25 for the "super" cells if he buys them in any form of bulk. Your better off finding a site that sells cells individually and then just wiring up your own replacement cell pack, if you are confident enough to do it. It is simple but many people are understandably intimidated about messing with something that powers a piece of equipment worth a decent chunk, if not all, of your paycheck. I suppose its entirely up to you what you do with your money, just giving a little of my insight.

Nope. Things are different here in AZ. The company freq's for big manufacturers such as Boeing and AlliedSignal (where I am writing from) are licensed to the customer, not the security agency. This makes sense because the head of security here works full time for AlliedSignal, not Wackenhut, the contractor providing security. We also have our own volunteer fire department who shares the TRS (900mhz smartzone II - I haven't found the freq's... yet!) with security. Should Wackenhut lose the contract for any reason, we don't need to reprogram our radios to match the new company!

A quick perusal of the FCC database reveals no freq's for Allied in the 900mhz band at all. Why? Because we use an SMR for this purpose to save $$$. Boeing is probably no different.

So you're left with the unpleasant task of searching all of the SMR's in the area for the security comm's. But it's not as tough as you might think!

Try this. Go near the plant (or in it if you work there!) and search the trunked MOBILE frequency ranges for any traffic. If it sounds like your security guys, then note the freq and add 45MHz to it. Then plug it into the FCC online database to get the rest of the system.

I've been trying it here, but our security guys are about as talkative as meditating buddhist monks, so I have yet to get the freqs. I do know we use a 900MHz smartzone II system. One of the security guys I talked with a month or so ago said they keep changing frequencies on them, so be aware of that also, if all of a sudden they go silent on you.

Try doing it at the top of the hour. A lot of guard companies require their personnel to check in every hour so no one leaves their post or goes to sleep...

Good luck. If you find them, send a note to Dan Rollman danr@azstarnet.com so he can add them to his book! (unless they're already there, I'll check tonight for you)
-Phil
Kevin Rickens wrote in message <37C12ADE.BFF52543@bellsouth.net>...
Just a hunch, but perhaps the function of SECURITY at that facility is handled by a contract entity,e.g. a private firm that provides industrial security. If you live near there, why not simply reconiter the facility......drive up to the gate and act lost or something. Note if the rentacops have the name of a guard service on their uniforms. Or, act like, God forbid, you want to work there and ask one of the guys where and who to apply to.
Then, take the name and look on the database.
GOOD LUCK!

(Sitting here and listening to New York and Santa Maria North Atlantic Air Traffic Control on 6627.8 Kilocycles on my Sony ICF-2010.) Well actually the Pro-92 has a 4 line display with N.O.A.A. S.A.M.E.. As for computer control, well the cataloug does not mention it. It does mention cloning from one '92 to another though. Too bad that this puppy does not cover 225-406 Megacycles like the '2052 does.
Would an S.M.R. trunked system fall under the Johnson/Uniden (LTR0 category? Also what does SMR and LTR stand for?

I agree with you totally!!

Some features are nice on some but EVERYONE out there has PROBLEMS!

What is so difficult about expecting programs to be user friendly and give you the info you need without all the crap to gum it up? That's why I am still in the process of writing my own.

Let me know if you find a decent one!

Problems I have found with some. SCANCAT - Visually distasteful, buttons not evenly spaced does'nt look like a professional receiver I would have on my desk. Also it claims to be ACCESS compatible, but none of my databases would it read...
Must live with the manual to use it. The manual might have been professionally printed by a professional printer but certainly not professional or mediocore quality. I will say they were good with customer service and gave me a full refund and I returned all the materials I received. I may have expected too much since I was the only one to bring up the cosmetic flaws in over 8 years of distribution.

Problems with Radio Manager... Only used the demo but it doesn't appear to control the radio correctly.... I expect to see channels and frequencies changing on the radio display as well as on the software display. Yep, they must match too!! Another one to live with the manual to use.

PC895 - Who wants a program that looks like the scanner, I already have that on my desk, why would I want to use a mouse instead of pushing the buttons on the scanner if that's all it will do for me. I already have the manual with my scanner so I did'nt need it to use this program.

Good Luck!

I just saw a news story on one of the major networks, that the some cop police departments are involved in selling guns. One even sells hand gernade lausnchers? Come now. Maybe that is why there is a need for the APCO-25 or TETRA digital standards, eh? Thank goodness that there is a standard instead of all municipalities/counties/states, etc. using their own propirety systems, eh?

A comment from my experiences writing software to control SW receivers:
Controlling the radio and having it's display change with your computer commands is fairly straight forward. Asking the control program, however, to constantly poll the radio and respond to manual changes of the receiver knob, switches, etc. presents a much more difficult task, uses up a tremendous amount of overhead, and can seriously degrade the performance of the program. I would not ask the programmer to do this, or at least not poll the radio very often.
Brian Denley

2102. A question

Newsgroup: rec.radio.scanner
Date: 1999-08-23 00:00:00 UTC
From: Djurkwhad <not@chance.com>
Message-ID: <ybow3.5454$36.647653@typhoon-sf.snfc21.pbi.net>
Source record: 109156

I'm fairly new to scanning (I got my scanner in May) and I was wondering if anyone in the Santa Cruz area knew any good frequencies. I'm looking for ambulances, fire police and taxis.
Thanks in advance.

2103. Re: MULTI-TRUNKING SCANNER

Phil: I am looking to buy a computer controllable desktop scanner. I noticed you didn't mention the 895xlt. I also saw that one of the new RS scanners is a desktop with a built in RS232 port. Any comments? Thanks in advance.
Brian Denley

2104. PRO-92 and Uniden Alpha Tagging

Newsgroup: rec.radio.scanner
Date: 1999-08-23 00:00:00 UTC
From: Ed Walsh <emw28@aol.com>
Message-ID: <7pt5j7$fj6$1@bgtnsc03.worldnet.att.net>
Source record: 109158
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I understand that the Pro-92 will have two lines of the four line display devoted to alpha tagging. Excellent! I am sure that many of us will appreciate that.

What I am hoping for is a base or mobile model that will have alpha capabilities. Has anyone heard if the upcoming BC9500 or BC780 will have such capabilities? Given the fact that more and more agencies are going trunked, and often have hundreds of talkgroups, I personally believe that alpha capabilities are a must.

Thanks, Ed

The 2006 uses a faster CPU and will scan a little faster than a 2005. Also the 2005's backlight can only be dimmed and not turned completely off, same as the early version of the 2006. The later 2006's backlight can be dimmed. Otherwise, they're pretty much the same scanner.

2110. Scanner Starting Pages

Newsgroup: rec.radio.scanner
Date: 1999-08-23 00:00:00 UTC
From: Bommeltje <bommeltje@tref.nl>
Message-ID: <7pq4i3$2h0e5$1@reader3.wxs.nl>
Source record: 109212

Hello there,

New in scannerland are the Scanner Starting Pages.
All scannerrelated links on one page together.
Just have a quick look and if you like it, you can make
them your startingpage (just tell your browser to do so).

Subjects: scannerhomepages, scanner webrings, live
scanner audio, aviation & space, formula one, software,
newsgroups, magazines, manufacturers, shops, spying,
and so on, and so on.

Go to:
http://scanner.pagina.nl for the Dutch scannerstartingpage or
http://leden.tref.nl/~bommeltje/scan4all.htm for the int. startingpage.

Do you have a great scannerpage that should absolutely be
linked on one of these pages: don't hesitate and send the
url(s) to: scanner@pagina.nl
Don't forget to tell us from which country you are and where
you would like us to place your link (subject).

Greetings from the Netherlands, Peter van Bommel

E-mail: bommeltje@tref.nl ICQ: #15915751

I hate to say it, but it buyer and seller beware when selling things on the net. I sold a scanner to JD awhile back and I sold it money order first and had no problem.

Unfortunately, you have to be careful ...

Just my two cents ....

Harry,

Well then, how about the Seattle/Everett/Bellevue/Renton etc... areas? Or if that's a bit much to ask, do you know what the FCC online (Percon) two letter code (RS) is that they use for security? I have found Boeing to have frequencies under AR, AF, IB, IX, IG, PF,YO, GO, and GP!

That's not the point. This is a SCANNER newsgroup. It's designed for the exchange of information about RADIO SCANNERS...not petty squabbling about who-owes-who money.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

2129. PRO-92,PRO-94 and PRO-2025 specs

Newsgroup: rec.radio.scanner
Date: 1999-08-23 00:00:00 UTC
From: radioshack <comments@radioshack.com>
Message-ID: <zk5w3.8664$pO3.101792@c01read02-admin.service.talkway.com>
Source record: 109231

(Pro-92) 500-channel
Follows analog Motorola I, II , I/II, GE/Ericsson and Johnson/Uniden trunked systems. Scans up to 10 trunked systems at the same time or trunked and convential channels togather. Enter names of services into memory and see them on the 4-line display as you scan. Features include weather alert with "SAME" (specific area message encoding), CTCSS/DSC decode and cloning interface. *With an optional cable al memory information can be cloned from one PRO-92 to another.
[coverage] 29-54, 108-174, 380-512, 806-960MHz (excluding cellular)
[Power] Requires 6 "AA" batteries or adapter
[JACKS] Earphone, antenna (BNC), power, PC interface
[Price] 349.99

(PRO-94) 1000-channel
Follows analog Motorola I, II ,I/II, and GE/Ericsson (EDACS) trunked systems. Extended coverage includes 225 and 1,240MHZ Ham bands. Built-in NOAA weather alert with "SAME" (no display). Memory is arranged in 20 banks of 50 channels. 20 priority channels. Sevice search makes it easy to explore preset frequencies of police,fire,weather,aircraft,marine and amateur Radio.
[Coverage] 29-54, 108 174, 216-225, 406-512, 806-960 (excluding cellular) and 1,240-1300MHz
[Power] includes UL listed adapter or add car DC cord.
[Price] 299.99

(PRO-2025) 1000-channel
Follows analog Motorola I, II ,I/II, and GE/Ericsson (EDACS) trunked systems. Extended coverage includes 225 and 1,240MHZ Ham bands. Built-in NOAA weather radio alert with "SAME" (no display). Built-in RS-232C serial interface permits computer control, uploading, downloading and cloning. 20 priority channels. Data skip. Search skip.
[Coverage] 29-54, 108 174, 216-225, 406-512, 806-960 (excluding cellular) and 1,240-1300MHz
[Power] includes UL listed adapter or add car DC cord.
[Price] 369.99

I compiled, linked, and built the source code into an executable
program. It looks like it should work. Type in the raw data and the
program will translate and print out intelligible information
(hopefully). Further information is in the ZIP file (attached as
decode.zip). I'm sure you know what to do with a zip file, but those
who don't can go to www.winzip.com . Further info is in the file.
Please post information on how this decoding project goes and
especially keep me updated :) .

So I'm one of the group's "helpers" now? I'm flattered. hehe
Keep up the good work, eavsdropper.

> Who is Bill Cheek, and why should I care about him ???
> A reply to the group, and myself, would be appreciated....

This same question was asked a few mmonths ago & I
gave this anser at the time. It is still correct. Perhaps I
should make a regular FAQ to post on this NG to answer the question
you pose.

Subject: Re: WHO IS BILL CHEEK?????
Date: 1999/06/15
Author: jmackey <jmackey@usa.net>
Bill Cheek is a man who lives near San Diego. He used
to be
active on Fidonet but then had to leave due to reasons
we won't
speak of now. He then became active on this NG & the
internet but
was again the cause of much trouble. Various problems
with
Mr. Cheek's action's resulted in Peter Laws
kicking him off of the "Scan-L" mailing list. More
similar problems
with Mr. Cheek caused him to have his internet access
revoked by his
Cable company ISP last summer. Recently he was briefly
held by
federal authorities and has been charged in federal
courts with
various illegal actions in regards to the use
of scanners. He is the owner & operator of a company
called
"Comtronics" & has produced a few books based on
information
he has complied from various sources.

Note et el - Mr. Cheek has stated he is several different types of
"Engineer"
but has never been able to produce any Engineer credentials from any
type of
public or private body issuing such credentials.

I hope this has been of help.

1) What's the difference between a "rubber ducky" and a normal, flexible antenna (if any)?
2) Are there non-omni-directional, portable antennas (ones you plug right into the top of the scanner)?
3) Is this 16" antenna for $40 bucks a good/bad/average deal? Anybody have this antenna? http://www.ccrane.com/scanport.asp
4) Dose it really make a difference if your antenna is hanging on inside of the window with a suction cup rather than just on the scanner? The signal still has to go through the glass.
5) What do you think of this gizmo (http://www.grove-ent.com/BRK9.html) vs. the suction cup window mount, I think it would perform better.

Try fixing the capacitor first. Back in the 80's I had to send mine
back to the factory and that is what they replaced. Hell, it's been
about 15 years but I believe one of the symptoms was being unable to
scan (even though I could manually step through all the freqs I had
programmed).

Source record: 108994

Did a little digging on the FCC search page and found this in the microwave DB for Phoenix:

2461.5625 Service: PP (police)

Anyone know what this might be for? I hear they will be installing a video link between the helicopter and police cars on the ground soon, maybe this will be or is the frequency???? If so, any garden variety satellite receiver *should* be able to pick it up and put it on the TV screen, right?

Or maybe someone has been able to successfully view these images in an area that has such a system already in place? Would make for some great scanning during pursuits!

Appreciate any thoughts on this..

In the U.S. (In my area at least) we have something similar, if not
the same. We call it "Aggresive Driver Imaging." If you run a red
light or speed past one of the cameras, it snaps your picture and you
are automatically mailed a ticket and a digitized picture showing that
you committed the illegal act. Hence my interest in this project. I
don't know if the cameras use a radio signal to transmit data, but it
would be interesting to find out.

It is a great idea. It's a viable idea. There is no
real need for the "OLD"scheme to be affixed to
the "NEW"scheme of things scanner-ese.

Would make foh a moah bettah scannah brah
dis kine be one use only brah...trunk

maybe dey can den make a biggah speakah
in da kine brah...dat a ono ono featah brah...

shakah brah,

bill conduit
etc.

Hi all--I was wondering, I have an AOR AR8000 with full coverage (including cellular). Is it illegal to sell it? Its a great radio, but I was just wondering what the group's understanding is.

Thanks.

Chuck

2160. Here's my Radio Shack story

Newsgroup: rec.radio.scanner
Date: 1999-08-24 00:00:00 UTC
From: Bill Markut <markut@genevaonline.com>
Message-ID: <YcHw3.3848$gW5.1186308@homer.alpha.net>
Source record: 109012

I've been lurking in the background for the most part in this group but I felt I needed to speak up on this topic.

I never have dealt much with Radio Shack because I've always been skeptical of them using calculators to add up your order...never seemed to be very 'professional', I guess...but anyway, I went there today to purchase an antennae for my handheld unit and came away dumbfounded.

First, I took somebody's advice in this group to get a cellular model antennae and the salesperson just kind of looked at me with some s***-eating grin on his face and said, "Why would you want to put THAT on your scanner????" So, thinking that I may have gotten the part number wrong or something we walked over to the accessories and sure enough I found the telescopic antennae that I had been looking for....right price and part number..."Well I never heard of putting cell phone antennaes on scanners before!!!"

"Okay, whatever...." I said. I then said that I would like to purchase an AC adapter for this unit....well, you can imagine the pain in the a** that was...in short, I came home without the power supply. Any help with the part number for that (to provide ac power to a BC80XLT) would be greatly appreciated.

At any rate, when I checked out I gave my name, address, family history, etc. but I had to come back an hour later to get some other things (phone line wire in particular) and had to go through the whole life story again! Then he wants me to change my home long distance to Sprint!!! Amazing!!!

Sorry for so long winded but I am shocked as to the reality of the "Technology Store"....

Bill

Hi Bill, yes Radio shack has some fairly good antennas. The external ones like the 20-043 etc work well. There is also the telescoping whip that replaces a rubber duckie. They are not as rugged as some but for the price, work well. If you get an external, get some good stiff coax cable. You can read about antennas and cable at this site.
http://strongsignals.net/htm/antenna.htm
Have fun, Cal

> is a standard instead of all municipalities/counties/states, etc. using
> their own propirety systems, eh?

Tuesday, August 24, 1999

Baca, Parks Join Call for County Gun Ban Government: Majority of supervisors are on hand as the law enforcementleaders announce support for the effort to prohibit weapons sales on county property. By NICHOLAS RICCARDI, Times Staff Writer

(story continues)
http://www.latimes.com/HOME/NEWS/STATE/t000075431.html

Frequencies for the California Department of Justice, CA DOJ.

154.680, 154.665, 154.695, 154.920, 155.475 & 158.790

The proposed "Firearm Law Enforcement Unit" in the CA DOJ would be charged with investigating and assisting local agencies in enforcing state gun laws.

The bill, AB1097, specifically tasks this unit with enforcing laws pertaining to gun shows, of which there were 188 in California in 1998.

The $1.9 million annually would provide funding and support services for about 18 new agents for DOJ. Another bill being considered, AB295, would have the DOJ (presumably some of these 18 agents) provide security and enforcement at gun shows if the local law agencies didn't have the

manpower or expertise.

John,

Nice job! My local Shack doesn't have their order of catalogs in yet so
I had to ogle the store's copy. While I'm very glad to see Alpha Tagging
on the 92, I'm a little disappointed that it isn't offered on the 94 which
has more memory and better coverage or even on the base model. Glad
to see GRE has stepped back into the picture to give Uniden some healthy
competition. We should see some great scanners showing up soon...

So many toys, so little time.

Thanks to "Bruce Mishoe" <brumish@tco.net> we now have a list of Northern California CalTrans freqs in the Shared Files area of SCANnorCAL.

If you're a subscriber, go to http://www.onelist.com/shareddir/SCANnorCAL/ or even try http://www.onelist.com/shareddir/SCANnorCAL/CalTrans.htm directly. You'll probably have to log in before they let you in.

This file only covers the area north of about I-80, so we could use more CalTrans stuff for further south. While you're there, note that we have CHP, CDF, "Links" and other goodies in the shared files.

Source record: 109044
Cross-posted to: alt.radio.scanner,rec.radio.scanner

If your listening is pretty much 800-band exclusively, I'd go for an antenna specifically designed for cellular or 800-900, such as from Larsen...they have a good selection with about any connector (that scanner uses a BNC, of course) at http://www.larsenet.com/products/portable/800-900tcd.html

You'll still get decent reception on UHF with one of these, and OK reception on VHF-High Band, but Low Band will probably vanish. In a building, I wouldn't really consider an outside antenna...you'd probably LOSE more signal in the connectors and cable than you'd gain by having something outside...stay as close to a window as you can!

Hello,

I am planning on buying either a new or used Radio Shack handheld scanner and need some help with selecting one. What I need for it to do are these things;

- Cover the Military Aircraft band (225-400 MHz)
- Be cell modifiable
- Scan around 50 channels per second
- Have selectable steps and modes
- Have at least 200 channels

Thanks In Advance,
BTJustice

I use my MAHA MH-C777 to charge up the 1600 mAh NiMH pack I
received from Lee Electronics. Takes about four hours. While
the C777 is a bit pricey ($50), it's worth its weight in gold
since it is computer controlled with both voltage and temperature
sensors along with a discharge feature. Since I own about 30
handhelds, that's a lot of rechargeable cells and packs to
keep in prime condition but the C777 does a great job!

Say what? Did Yupi update the 225 in a way that I was unaware of? Last I knew, the AR8200 was the only hobbyist-level production radio that had the 8.33 steps.

You been flying above one-zero thousand without a pressurized cabin John? ;-)

There are only two models which come even vaguely close to your
description, and neither are available new in the US. The PRO-43
was mostly cell-modifiable but wasn't that fast and didn't have
selectable steps. The PRO-26 is fast and has selectable modes/steps
but it is not cell-modifiable although there was a down-conversion
mod that effectively wipes out the 400-500 MHz coverage. The answer
would most likely be a PRO-26 from Europe which has cell intact
but is obviously illegal to import into the US.

>>> why they are using AM mode.

Now that the above has been corrected to read AM instead of FM and
thus makes sense...

All aircraft comms are in AM. The civilian aircraft on 108-134 MHz are
in AM. The military aircraft band 220-400 MHz uses AM. Thus the
aircraft are equipped with radios that transmit in AM mode. When those
aircraft radios come up outside of the regular aircraft band - which
not only happens at 135-138 MHz but also in other areas of the
spectrum such as 48-49 MHz, 174 MHz, and elsewhere - those radios are
still going to transmit in AM.

So they're using AM mode because that's what aircraft radios do. :-)

Can anyone confirm the type of trunked system that Eden Prairie, MN is using? I have been told that it is an EF Johnson system, but I am wondering if it is an LTR system that the new Pro-92 is capable of receiving.

I have read that an indication that a system is an LTR system is the lack of a control channel and transmissions every 10 seconds or so being present. It sounds like the Eden Prairie system may be similar to this description.

I appreciate any information that anyone might have.

>Phil: I am looking to buy a computer controllable desktop scanner. I
>noticed you didn't mention the 895xlt.
You're right, I didn't. It is a very good scanner, but doesn't have the TT2 technology in it, so isn't really a serious contender anymore. I'm looking forward to the day when Uniden combines the BC9000 with a 245. That will be on hell of a scanner...

>I also saw that one of the new RS
>scanners is a desktop with a built in RS232 port. Any comments?

This caught my interest also, but I haven't seen one yet. If it is a desktop PRO92 with only upload/download then no thanks, but if it is more like a T2 version of the 895 then I'm sold! Send mine to.... ;-)

Hope that helps.
-Phil

I have an old scanner and I just want to be able to pick up the local police and fire and the other local people that use radios.

I was wondering if radio shack has any decent antennas that I should buy so that I can just pick up a bit more signals.

thanks

NFM uses a narrower bandwidth, but has less fidelity (audio quality), usually suitable for voice/data communications, not music. WFM uses a wider bandwidth, and is used for broadcast quality radio stations, music, T.V., etc. AM is "audio modulated", and FM is "frequency modulated". That's a start.

Source record: 109168

I would agree with those who say that Mr. Cheek has brought these problems upon himself. Perhaps it is a way to gain the attention of radio hobbyists.

He writes a monthly column in MONTORING TIMES which is right interesting. He may be one of those " self taught " engineers, who knows.

I have no interest in the fellow one way or the other, but would caution anyone who thinks about sending him money to fight his latest legal mess. Don't fall for that.

There was some recent commotion about contributing to his " defense fund ". The notion that he is a some sort of freedom fighter or is protecting the hobby is just absurd.

Perhaps this kind of volatile and aggressive public posturing is the doing just the opposite: it makes hobbyists look like kooks and lawbreakers. Save your time and money.

Thanks to you eavesdropper for the an3.1. Now can anyone help me with a wacars problem? - i've got a crappy gateway2000 p5-75, I run wacars not in airnav yet as I am finding cpu over-run on the data decoding. it runs for about 10 minutes and I get a good hit rate of data, then it seems to hold up and the cpu activity goes through the roof and just puts it in overdrive. I have ran it with superfasst98 which supposed to speed processor up. but still it happens. I use 38kbps setting, and the noise levels on the line in are within any overload possibility. could qrm cause the data error, I am approx 8 miles from heathrow and with full squelch on I still get a good hit of data. ~Where am I screwing up? Its great doing it after work. I am usually monitoring between 2-6am and use the european frequency with some success. only thing is... where the hell does that poxy G-BIVA keep coming from? must get the hang of this soon - any help out there?

2229. FA: Pro 2042 with OS535 and Programmit interfaces REDUCED!

Newsgroup: rec.radio.scanner
Date: 1999-08-24 00:00:00 UTC

I have reduced the reserve from $450 to $350. See http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=151909267 . I also have a UK version with US power supply and OS535 that can be fully 800mhz enabled with a code that can be obtained on the internet. Asking $450 for the UK model.

Thanks for your interest.

Don

Probably because the general public doesn't know about this, and (more
importantly) doesn't care. Their opinions of scanner users are
primarily molded by media reports such as the 20/20 show a few months
back where some sociopath listened to his neighbors' cordless
telephone calls and terrorized them with harrassing phone calls. These
uninformed bozos would undoubtedly believe that Bill deserved what he
got.

I posted my experiences doing a very similar repair to my SW8 here about 6 months ago. In fact, I used the same diodes that you used. I found them a Tech America and they got them to me the next day! All went well during "surgery" and the "patient" now exhibits far improved performance on the bands above 8 Mhz. I figure I saved quite a few $$ not having to send the receiver to Drake.

Good luck with your HF-225/E and may it have many more lives.

$149 US, I presume? The funny thing is, you're posting from the
GTA and there is another guy in the GTA (Steve Mane) that posted the same
scanner for sale last week for $90 Canadian (about $60 US). What's really
curious is that your forsale post and his were the same, word for word. Go
to Dejanews and look for message ID <37b519eb.24232558@news> if you don't
believe me.

So, what's up with that?

While I will admit that most of the sales people at RS leave a lot to be desired, they are not ALL like that.

I happen to deal with a lady at my RS, the same lady I have dealt with for over 10 years.

She doesn't pretend to know everything about everything, but she always gives me excellent service and always goes the extra mile for me. Sometimes all I have to do is call and tell her what I need and it's waiting for me when I get there.

ALL of my RS business, both for myself and my office goes to her.

Maybe I'm just lucky and maybe she's just an exception, but I will continue to shop there as long as she works there.

JTWard01, you know who I'm talking about.

These battery packs from them work fine.
You just have to play with them to make them fit.

If incorrect.

In AM the carrier stays at constant amplitude.

In FM the carrier varies with deviation.

Message-ID: <hy_w3.10$sl4.222095@news-read1.qis.net>
Source record: 108900

Several years ago I was doing Auto Alarm installations for Radio Shack.
On one occasion I had a customer who had bought a particular model unit that seemed to been poorly designed with respect to the power rating of the transistor used to drive the ignition cut off relay.

(Note I had seen many of these units with thee same problem)

The customer returned the unit to Radio Shack store A were they purchased it and received a replacement.

A few weeks latter, another customer came to me with the same model unit. They bought it from store B.

I noticed that the box was opened and a few pieces of mounting hardware were missing. I questioned my customer, and he told me that store B was out of stock, and had store A send them one.

?

I hooked it up and guess what?

Same problem.

I started writing down information and when I got to the serial number, it was the same defective unit I had had two weeks ago.

The story gets worse!

I called up store A and inquired about it.

The store manager acted like it was Standard Practice to put it back on the shelf and re-sell it as a NEW unit!

I then called the District Manager. He acted like he could not care.

I no longer do installs for Radio (Rip-Off) Shack, and only buy from them when it is a last resort or an emergency!

Evidently the Pro-92 will have a cloning feature that will allow it to copy the contents of another Pro-92 radio. It stands to reason that this cloning feature could be emulated with computer software. This would at least enable you to upload and download frequencies to the radio scanner. If we are lucky it will have more advanced computer control capabilities but I doubt it. I would be satisfied with computer emulated cloning abilities since this would allow the creation of an Internet database of the various LTR, Motorola, EDACS and Conventional programming schemes from around the country.

Nuh-uh.....AM as in "Amplitude Modulation" means the amplitude is modulated,
or changed. If you look at it in the wave form, the height (or amplitude)
of the individual waves is varied to carry the encoded transmission.

FM on the other hand is "Frequency Modulation" whereby the amplitude is
constant (All the waves are generally the same height) and instead of the
signal being coded into the varying height of each wave, the frequency (or
the individual spaces between the waves) is modulated (changed) to carry the
encoded transmission.

2265. Doc needed for older ICOM IC-R1

Thanks, but I went to this site but could not find any documentation. I found some specs on the scanner but no user's manual. It's from '93 or '94 so I don't know if I can even find the manuals. The web site says you need to find a dealer but I don't think a dealer will have manuals from 5 or 6 years ago.

Any other ideas?

I think that system is coming here, if it's not here already. A friend
in the business tells me that previously it wasn't legal because a
police officer could not swear to a court that the digital image had
not been tampered with. But the technology has now been found to get
round this. The cameras he deals with use a telephone link.

Perhaps one of the legal eagles on the group could comment.

Peter.

even if you can get it out of band it will be WFM and utility and pmr
stations use NFM so the reception will be poor

Ref: Nova's ?

This is referring to the amount of "change" in the signal due to the modulation.

In FM systems, the carrier frequency is shifted slightly in accordance with the modulation (called deviation in FM).

Narrow = 5 Khz or less deviation. (Used in Business & Public Safety radios)

Wide = 25 Khz or more (Commercial Broadcast Radio and T.V.)

In AM the frequency stays put, but the "strength" of the signal varies in accordance with the modulation.

This is just a very basic explanation. If you need more, let me know and I will send you some references to books to read, and fax or email some text if I have it.

Hi there,
I'm considering in buying a scanner from the U.S. but am not too sure as to whether it'll work in Australia. I've heard something about the IF shift frequency or something along those lines being different in Australia to the U.S.???

Any info on this would be much appreciated :)

TIA

Microwave has about the same line-of-sight characteristics as UHF TV, so that's not really a problem. If the helicopter transmitter is out-of-sight beyond the horizon, it's likely too far off to receive anyway. A more likely is would be blockage or absorbtion of the signal by mountains, buildings and trees.

That garden variety (C-Band) satellite receiver tunes FM video signals in the 4 GHz range, requiring a feedhorn and LNB downconverting to L-Band in the 1 GHz range. To downconvert from 2 GHz would not be a minor mod. The signal bandwidth also would be a major problem.

TV signals come in several varieties, much like radio signals. Broadcast VHF and UHF TV use AM modulation with about 4 MHz bandwidth. Garden variety (analog) C-Band satellite signals use FM modulation and about 24 MHz bandwidth. Digital video is becoming all-the-rage, and MPEG2 video images can be encoded and compressed within very narrow signals, but require specialized receivers and decoders.

It sounds like fun, but I don't see a way of adapting easilly available equipment to try monitoring.

Hi,

I've just purchased a Uniden BC80xlt from the U.S. to use here. Everything works fine and reception is good. The only thing you will have to remember is that nearly all scanners have the mobile phone frequencies blocked so you can't receive them.

Richard.

Any 12VDC "wall cube" that has a 1.3mm tip positive will work on your
BC-80XLT. If you must go to R/S, just get their multi-plug adaptor & set it
to 12V. That way you can bypass the Al Bundy salesman & the sprint salespitch
.

Um, you paint with a little too broad of a brush there... In one lifetime I've happened to have been all four of the "types" of people you're stereotyping.. a "kid," an electronics salesperson (tho not for RS), a security guard and a cop. Always been the same "me," and I've known from terrific to terrible in all four groups.

Personally, I would rather shop at my local Shack than at just about any store in town as I find that once the Shacker understands that you're a repeat customer it turns into a social visit most times and not just ignored
as in most chain stores.

I managed two company Shacks (first one was the toughest area in town, second
was in the wealthiest) and discovered that I preferred to assist the customer
rather than take all their money and while this did not endear me to my district manager it did bring increased sales through referrals due customer
satisfaction.

We were touted as "we've got answers" ..but sometimes we didn't. I learned
more from asking questions of my customers and listening to their experiences than I may have learned in 23 years of naval communications and
electronics repair.

I departed RS (with the blessings of my DSM) after I understood I would rather assist people than badger them into buying cell phones they didn't
need or switching to a LD carrier or... whatever.

Overall, Shacks are pretty good places.

The wording of the Act is open to different interpretations. For forty-odd years, it was interpreted that you could listen to what you like but might make no use of or act on what you heard. Due to pressure from the police, the Act has recently been reinterpreted so that not only is it considered an offence to listen but also to be in possession of equipment that enables you to do so. AFAIK, this has not yet been seriously challenged. Certainly, the reinterpretation of the statute is being applied in a discretionary manner, though there is no such power of discretion granted in the statute.

There is a mail-order company in Florida which sells the entire RS line by mail-order. They advertise regularly in PopComm. Their prices are a bit better. Plus, you save the sales tax (outside of FL) and the aggrivation of having to deal with the drone behind the counter.

snip
"Radio Shack, you have questions and we have not got a clue."
I buy a lot of electronic "stuff" from the "shack".
Only because it is the only game in town. Whenever posible I mail order
from places like MCM, who even though they are also clueless admit it.
Most of the time the stuff is in in a day or two. But at least 2 or 3 times
a month I just can not wait. And what the heck my clients are the ones in a
rush, so it is their money. I never ever give them any correct information.
Because 5 years ago the clerk mispelled my first name and 3 weeks later I
was swamped by junk mail to that mispelling. So, in spite of what they
claim, they do sell your "data" to other people. I us the name/address/phone
of a local "newscaster" that I dislike.

While I love my PCR1000.
And it is truely wide band.
I doubt if any will receive down to 10KHz. I have checked 4 and they all
bottom out at 35KHz.
Of course the average EBay devotee will not know the difference.

If incorrect.

In AM the modulating signal adjusts the level of the carrier.
In FM the modulating signal adjusts the frequency of the carrier.

Just some thoughts - Are you talking handheld or base? If base, you got the question of AC voltage. US is 110 volts, 60 cycle. If handheld, batteries will not be a problem, but if they're rechargable, you again have the question of the AC power for the charger. Second, is the scanner an "all-band" type. That's OK, but if it's only covering US frequencies like low band or high band VHF, it MAY miss covering Australian frequencies you're interested in. Look carefully into these issues, other than that, it should work out.

Wow, GREAT pic's... I love that display on the 92 - that alone is worth the price of admission on this thing...

Can't wait to get mine. Talk about cool....

One thing remains a mystery though... Will it or will it not allow a PC to upload/download data from it? Such a radio would be no fun if one had to program all 500 channels, talkgroups, ctcss tones, fleet and channel alphas by hand... That would be an all day task!

Perhaps someone at RS knows? I'm sold either way, but the ability to create a file on my PC and then zap it up to the scanner in minutes beats hours of programming any day.

>There is a mail-order company in Florida which sells the entire RS line by
>mail-order. They advertise regularly in PopComm. Their prices are a bit
>better.

I've noticed a lot fewer non-corporate Radio Shack resellers in the
last few years. Remember when Grove sold Radio Shack scanners? You
could get great tech support from them. Do you remember MerriMac
(sp?) in Texas? They had great prices! Even with shipping, they were
usually 15-20% less than the Radio Shack at the mall.

What happened to all the resellers? Did their agreement with RS
expire or what? I could see corporate Radio Shack trying to squeeze
them out. Is that what happened.

Hi,

Any comments on the AR16? Rich Wells was not so happy with the AR16.
I need it 90 % of the time for searching banks so it looks like that's ok.
How did you reprogram the Ar16 ranges? I saw somes remote commands but have
no idea what it means.
I only know I need a converter to connect to my pc?

Any comments are welcome in this NG before I decide.

Thank you,

Ray

Actually, this isn't for me. I meant that I like the UBC9000-XLT
but I hesitate to suggest it as it could lead to a sticker-shock induced
coma. I should have been more specific.

Can anyone recommend a good base scanner that is less than $250
(US dollars)? Again, this would be for a beginer so ideally, it won't need
a bunch of modifications and it should be cellular ready.

>From: "Rob" info@compupartner.be

>I would like to replace the standard antenna of my Icom R10 for a better
>one.
>Does anyone know if I can use...>>>

Hello Rob,

I have used the following three antennas on my R10 besides the stock one.

Sangean ANT-60 - roll out long wire type. Works good on SW and ok on AM.

Radio Shack Amplified SW antenna model 20-280. Works good on SW but tended to overload a bit if I was not careful with the RF gain (my fault) real good without the owner induced error.

And the Watson W-881 Super Gainer.
Good for a replacement whip type, similar to the stock antenna (longer) but it gave me a nice signal strength gain that was noticable both in audio and on the signal meter. It boosted the gain on all bands to include SW and AM. I was much happier with this one over my stock R10 antenna.
Hope that helped a bit !

The trouble with microwave is that it is extremely line-of-sight sensitive. If you're not right underneath or with direct line of sight of the helicopter you're out of luck.

I do agree that it would be VERY cool to watch. You could probably see the live FLIR image as they searched for the suspects. I can't think of anything more cool than that.

Well I'll tell you what I think of Radio Shack. I think that in the 70's and early 80's Radio Shack was a good place to shop. The employees were knowledgeable and for the most part did not try to unload a pile of useless crap on you whenever you entered the store.

Sadly those days have long since passed. Now all of the stores are manned by kids and guys who are to Electronics Salespeople what Security Guards are to Police Officers. I think that paints a pretty clear picture. It's obvious the RS sales staff work off of a "crap we're pushing this week" sheet and they have no knowledge about anything they're selling. While I'm a little more technical than most, I expect that someone who is trying to sell me something will not have to pull out the catalog or the product manual to answer EVERY question.

If not for the convenience of being able to pickup a few odds and ends without driving all over town I'd have no use for RS whatsoever. While I admit I am impressed by the new scanners scheduled for release soon, I would much rather buy from a ham radio shop if they were selling the same radio.

I am sure there are some Radio Shack Salespeople who know what they're selling and are helpful, such individuals are certainly the exception to the rule. I am so turned off by the whole "Sprint" and "do you have a cell phone" bit I can't even begin to explain. Please, if anyone with any influence at Radio Shace sees this tell those runny nosed dork kids to BACK OFF.

I agree! Alpha tagging and PL tone decoding should be standard
equipment. Considering a $50 price difference why would anyone bother
with the Pro-94? I am also disappointed with the new desktop model.
If it included alpha tagging and CTCSS/DSC it would kill the BC895 and
BC9000. Oh well... maybe next spring?

2337. Radio Shack scanner model PRO-2036 for sale

Newsgroup: rec.radio.scanner
Date: 1999-08-25 00:00:00 UTC
From: iden <iden1000@hotmail.com>
Message-ID: <40Lw3.1263$k7.99348@quark.idirect.com>
Source record: 109033
Cross-posted to: alt.ham-radio.marketplace,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.swap

I have a Radio Shack scanner model PRO-2036 for sale. Features:

- 200 Channels (10 banks of 20), 10 priority channels w/5 year memory backup
- Large adjustable backlit display
- "shortwave" style rotary tuner for manually scan channels/frequencies
- Hyperscan allows 100 channel/step per second scan speed
- Dynamic Frequency Storage lets easily move frequencies around, and also prevents entering duplicates
- CTCSS tone squelch handy for receiving business and amateur radio bands
- One touch weather band access w/weather alert tone
- Auto-Store feature quickly finds and stores active frequencies in channels within selected banks.
- Auto-Record option allows unattended recording of action on favorite frequencies to tape recorder with remote.

Coverage:

29-54 Mhz, 108-174 Mhz, 216-512 Mhz, 806-823.9875 Mhz, 849.0125-868.9875 Mhz, 894.0125-956 Mhz

For those interested, the cellular ranges are locked out, but the radio picks up cellular crystal clear on the image range between 900-920Mhz.

Comes with scanner, power supply, box, manuals .

I'd like to get $149 for this but will take offers. If you're interested please email me at iden1000@hotmail.com Thanks.

I have repaired my Trident Tr2400s' keypad by cleaning the contacts and
then using a siver based ink(?) pen I picked up at an electronics store.
It was for repairing printed circuit traces. Just drew the pen accross the
pad(s). Then let them dry over night and reassembled the radio. It lasted
for about 3 years.
The pen(?) cost about $13, but saved the scanner for more use.

Phil ... that sounds about right ... we have that capability here in Kern County. It's great ... Air 1 video can be seen by the watchcommander, county communications, and soon the Comm Center (from what I here) ... most helicopters use an omni-directional antenna on the chopper and the same on the receiving end ... real handy ... flir looks great ..

I'm looking for a recommendation for a base scanner for someone
that is just getting started. Ideally, it would be able to receive all the
cellular frequencies as well as the standard stuff (this is for use in
Canada). I rather partial to the UBC9000-XLT but I know it's overkill for
a beginer.

Any suggestions? You help is much appreciated.

Well, if it's bollocks I'm in good company. See any good book on FM
modulation, and AM modulation.

Are you familiar with the Spectrum Analyser (Frequency/Time domain
analysis) rather than the Oscilloscope (Amplitude/Time domain analysis)?

On a S/A most people expect to see the carrier change into a blur when
mod is applied as the carrier rushes madly up and down. Instead, the
carrier dips and small decreasing sidebands appear higher and lower in
frequency. This with a single frequency tone as modulation.

I've also done these experiments at college, at work and at home.

Which 'other follow up'?

Mike

The BC3000XLT can pick up all the cellular you need, both in the
800MHz range via downconversion and images in the 900-1000MHz range.

Maybe he was. What's your point? Do you think Dan Farmer wrote his
famous "satan" network attack tool for would-be hackers? What
difference does it make? There are legitimate uses for these pieces
of information. What if I wanted to set up a video encryption scheme
for my own service? Should I be denied the information on what
DIRECTV did?

>> What's illegal about publishing?
>
>So you don't mind if we "publish" your bank account and PIN number? It would
>be OK to publish you house outlay, the possesions you have, where you

>What's the difference?

The difference is between the bank security procedures and the actual
account information. Publish my account? NO. That's not legal.
Publish the security procedures the bank uses to defend my account?
By all means. I want to know their vulnerabilities.

>> The two are not the same. I'll agree that it may not be popular with
>> DIRECTV when someone writes a how-to on how easy it is to break their

>the possesions you have, where you keep them and the times you and your
>family leave the house vacant? Isn't that my right by your interpetation of
>the 1st amendment?

This is the difference between methods and the keys themselves.
Certainly, the keys themselves should never be a matter of public
record. The methods, however, should be open to discussion.

You just made my point. He caters to those trying to illegally receive
satelliite broadcasts they haven't paid for. How is DIRECTV wrong trying to
shut down somebody that makes a living off helping people steal from them?

> What if I wanted to set up a video encryption scheme
> for my own service? Should I be denied the information on what

To the extent you will be robbed by every two bit crook. I don't think you
are really being very honest.

You admit that Dan is supplying the information that is used to rip off
DIRECTV yet it is OK with you. I don't buy it.

Jake, I guess we do agree to disagree. I do appreciate you discussing the issue and not tossing personal shots into the mix.

There might be a broken wire in the battery connector cable. If not,
the battery sensing circuit may have a bad component. With a voltmeter,
the circuit can be checked fairly easily. If you unplug the radio
overnight is the memory saved?

Arthur, that was uncalled for. There is no need for namecalling or flaming.
If you wish to resort to petty things like that, please don't read this
thread.
Glenn is entitled to his beliefs and opinions as I am entitled to mine.
In some ways, I understand his point of view, as I hope, in some ways, he
understands mine.
Quite frankly, I am enjoying the conversation and his input as well as the
imput of others.
As I said before, what bothered me was the fact corporate America told this
magazine shut
down or else. The information in the magazine probobly COULD be used for
illegal purposes.
I'm not disputing that. But with the line of thinking I've seen, we can do the
following:

Ban houses. COULD be used to hide illegal drugs, illegal immagrants......
Ban cars. They COULD kill people.
Ban scanners. They COULD be used in an illegal way.
Ban radio/TV. They COULD show illegal things too.
Ban computers, they COULD be used in an illegal way too.
Phones have to go too.....
Ban people from having kids. They COULD grow up to be murderers.

How far is it going to go? So far, we have no place to live, no transportation
save our own two feet,
No radio, no tv, no computers, no phones.....lets ban everything that could be
used in an illegal way.
I didn't read the article that got Dan Morgan into trouble with DirecTV, so I
don't know what it was
about. As I said, what bothered me, was the fact his magazine could be forced

to shut down based
on what was printed. To me, that sets a very dangerous precident.
Lots of things today can be used in an illegal way.
Fertilizer and amonium nitrate can make a bomb. Should be ban those two items?

Scanners can pick up cordless phones, should we ban those too?
The ECPA, in my opinion is very poorly thought out.
Cell companies didn't want to spend the money to encrypt.

The sad thing is that not all RadioShacks are created equal. I go to Mason City (ia) for my RS needs.
The one in the mall is (or was last time I went there) managed by a knuckle head,who once told me my malfunctioning 2-way was not working because I had the nine volt battery backwards. So he disconnected it and tried like hell to connent it the other way. (ever try it, it don't work)
But the one in the plaza on the west side of town has several knowlagable guys on the staff. I always go there.
Life and Radio Shack are like a box of choclates . . . . .

Comparing terroism and theft seems to be reaching a bit wouldn't you say.

> Scanners can pick up cordless phones, should we ban those too?

Give congress the time.....

> The ECPA, in my opinion is very poorly thought out.

Yes it is terrible, but has nothing to do with stealing satellite service.

A similar example is Bill Cheek and his brush with the law. He is in trouble for alledgely selling some data slicers and supplying the software to decode MDT. The feds busted him. There are quite a few others that still are selling the data slicer but have had no problems with the feds. Why? IMHO because they have never posted on their site (as Bill did) that the device can be used for MDT decoding and they have never supplied the software. Dan Morgan is in the same boat. There are many books on encryption and a few mags cover it too. They don't have DIRECTV and lawyers after them because the prime purpose of their publication is to educate or entertain not guide people on a mission to steal DIRECTV's product. There is a distinct differnce.

In the UK there is still 'residual' AM - that is equipment that is in place and has been for years - mainly now Police, Fire, air-ground, and some PMR - but the vast majority is FM.

Hence AM is often known as Ancient Modulation.

I have one, and am perfectly happy with it... even though it has a sucky
battery life of around 5 hours.

Probably you have checked USA edition PCRs..or probably your skills are under
average Ebay devotee skills ...
I've bought this PCR-1000 in Italy 6 months ago, and I can guarantee the full
coverage from 10 kHz to 1.3 GHz...
As mentioned in the Icom's site, performance indicated are for a range from
500 kHz to 1.3 GHz....

It is a very popular unit.

For my take, stop by my site and read the review I wrote.

You can also look up what others think about by using my
Radio Survey page.

If you need help decide, try my Picking A Scanner/Receiver page.

Couple of years back, I bought a Tandy Patrolman. Was a bit put out
when I read the booklet which gave a bandplan which excluded the 78-79
mhz freqs. As this is the country NSW Police band, I was especially
concerned.
Enquiries revealed the model was modified for the Oz market and DID
cover the 78-79 freqs.
Seems that band is not a relevant band in the US.
Lesson : if you are not buying a full coverage model, check the
bandplan.

What you see on an oscilloscope is the sum of the carrier and two
sidebands (assuming tone modulation). This does vary with modulation
depth. However if you use a Spectrum Analyser you can see both sidebands
and the carrier separately. The carrier stays constant.
>
>FM on the other hand is "Frequency Modulation" whereby the amplitude is

>the individual spaces between the waves) is modulated (changed) to carry the
>encoded transmission.

As above, if you use a Spectrum Analyser, the FM carrier will be seen to
decrease in amplitude, with increasing deviation, to zero then rise
again, then decrease etc.

After all, where does the power in the FM sidebands come from? It can only come from the carrier.

None, other than the possibility that U.S. Customs will seize and destroy
the radio as contraband and you'll have paid all that money for nothing. It is
a remote possibility, true, but it has happened a couple of times.
Also, I think there may be some step size differences and other things so
the radio conforms with the European bandplan, but I'm not certain on this.
Finally, getting the radio serviced in the US may be a problem since it
won't be covered by a US warranty, and there may be some legal problems in
servicing a full coverage scanner and returning it to a customer in the US.
Again, just something to think about.
I guess the question is, is cellular really that important to you? As for
the price difference, import duty may eat up a lot of that $30 savings. Check
before you buy.

Although they have been selling lightbars, I imagine they will surface in this newsgroup.

They posted the following eBay items 144428464, 144433927 and 134062020. All were the same lightbar. the same thing occured with item numbers 135822862 and 144649389.

I reported this to SafeHarbor@eBay.com and he was the response:
The following auction:

144649389 - Federal Signal Smart Vector lightbar, police

has been ended due to listing violations.

In an ongoing effort to conserve system resources and maintain the correct categorization of all items listed for auction, we will end any inappropriately listed auction or move, to an appropriate category, any auction listed in an inappropriate category, pending Safe Harbor investigation. Please do not hesitate to contact us if you have any questions about listing procedures.

Regards ,

Dolores (ended@ebay.com)
eBay Inc.

And to top it off, here's the response I recieved from the seller of the five(or was it just one) lightbar:

What seems to be the problem here? You keep questioning my auctions here but I can't figure out what your point is supposed to be. The only thing that I can see is that you have a problem with me re-using my ads to sell identical items. So far as I know, there is no rule against saving time by re-using an ad. What I need to know is if you are going to make good on your high bid for the Smart Vector lightbar. If you have a problem with this, or you have other questions or concerns, feel free to give me a call (775)356-3909.

Bottom line here:
This guy had posted the identical item, with an identical description, multiple times. Each auction had ended, but he had a policy of holding checks for 10 days to clear. He would start the next auction with an ending date before the last guys check would clear. It would appear he had sold the same item at least 3 times. I've E-mailed all three"succesful" bidders, and none have the

merchandise.

It's just a click away before he tries to peddle his scam using radios instead of other items.
The difference between Genius and Stupidity is Genius has its limits. Albert Einstein

I would not be interested in such a radio. I don't know about your locale, but there are lots of things to listen to in my area that are not on trunked systems. I can carry one scanner that lets me tune into whatever I need to listen to, wherever I might be. The alternative would be to drag around both a conventional scanner and a trunking unit, and that would be extremely inconvenient. For the flexibility I need, I'm willing to put up with whatever minor disadvantages result from the current dual-mode units.

Close but no cigar.
Older PCR1000s allowed you to change the data with a software program,
but at some magic point they changed the circuitry to block re-writing
the EEPROMs. There is a simple mod (remove 2 0ohm smc shunts),but while
not all that hard, one could ruin an otherwise good radio.

We can publish books on how to build bombs. Do we squelch them?

We can publish books on how to write encryption routines. Do we
squelch them?

We can even publish recipes on how to home brew your very own copy of
Bass Ale or Coca Cola.

We can comment on encryption schemes to our heart's content.

What is wrong with writing an article on how DIRECTV encryption works?
We're not talking about giving out the codes.

The two are not the same. I'll agree that it may not be popular with
DIRECTV when someone writes a how-to on how easy it is to break their
encryption. Yet this is exactly the sort of speech which the first
amendment is designed to protect. If DIRECTV has a weak encryption
scheme, don't you think it would be worthwhile for someone in society
to point that out?

Go to this page and at the bottom there is a link to a PDF file with many
tap points. On the R-10 if you do it like they say one jack will have the
squelch and the other will have the discriminator audio. I think they
hooked it up so the squelch was with the CI-V jack but not positive. If youi
need more help I can take my R-10 apart and look at it again.

> squelch them?

You aren't publishing propietary information or instructions to receive
services you haven't paid for.

[...]

> We can comment on encryption schemes to our heart's content.

Comment is different from giving the information as to how one can steal
from DIRECTV.

> What is wrong with writing an article on how DIRECTV encryption works?
> We're not talking about giving out the codes.

So you are telling me that Dan was not catering to the satellite hacking
community with this? His magazine was nothing but an educational work
squelched by big mean DIRECTV? I don't think so.

> >> the strong possibility that something like
> >> this could hit 2600 and Off The Hook, what people can do to

> >
> >If the illegal activities that hurt honest businesses continue we can
only
> >hope so.
>
> What's illegal about publishing?

So you don't mind if we "publish" your bank account and PIN number? It would
be OK to publish you house outlay, the possesions you have, where you
keep/hide them and the times you and your family leave the house vacant?
What's the difference?

> I think most of us have a pretty good idea of what the first amendment
> says. Do YOU?

Yes I do and publishing how to steal services is not part of it.

> The two are not the same. I'll agree that it may not be popular with
> DIRECTV when someone writes a how-to on how easy it is to break their

How do you figure that? Again, it would be OK to publish you house outlay, the possesions you have, where you keep them and the times you and your family leave the house vacant? Isn't that my right by your interpetation of the 1st amendment?

> If DIRECTV has a weak encryption
> scheme, don't you think it would be worthwhile for someone in society
> to point that out?

...and if the security to your home and wealth is weak its OK to publish that to point it out?

Sorry, we don't agree.

Seems to me, DirectTV should shore up its encryption then.
Look at what happened with RC4 (the supposedly 'uncrackable' DES standard)
It was cracked in less than a year, forcing the government to seek stronger
encryption.
From a 56 bit key to a 128 bit one, RC5.

Who said I was stealing anything? What caught my interest was the fact that
Dan Morgan alone cannot defend himself against corporate America.

My bank account information is available to anyone that works in the banking industry.
You keep missing the point, it's not WHAT, it's HOW.
I could care less about someone's banking information. Doesn't matter to me.
What interests me is the algorithms used. Until you understand what motivates true hackers, (and I don't mean the media definition) then you will never understand
what I am trying to say.

>
>

Instead of working with Dan Morgan to track down people advertising and actually selling decoders
and shutting them down, they said shut down your magazine or else. Like that will stop the illegal decoders.
How about they shut down Popular Communications or Optoelectronics because they have advertisements from people selling FSK decoders? After all, they can be used to monitor MDTs.
Lets take away scanners from people too, after all, we shouldn't be listening to the police now should we?
How about we shut down Smith & Wesson because in your point of view, guns kill people?
Why not also shut down the cigarette industry because ciggies cause cancer that kills people?
Oh, and don't forget Budweiser and all the other alcohol beverages on the market, they have to go too.
After all, people are COMPLETELTY innocent, the gun manufacturers, cigarette industry, and Budweiser
are just TWISTING everyone's arm to go out, shoot up a daycare center, inhale all that tar and nicotine
and forcing people to get behind the wheel of a car drunker than sin. Lets ban cars because of drunk driving
too. What Dan Morgan posted was information. Nothing less, nothing more.
He is protected by the First Amendment and I stand by my opinion that the magazine itself should not
have been forced to shut down. I may not like the fact that scanners can pick up cell (before the ban)
or that cordless phones aren't encrypted and can be listened to freely, but I'll gladly fight for your

right to own a radio that can pick those frequencies up. There is even a bill coming up, where law
enforcement want to be able to go into anyone's home, and snoop around in any computer system
without a court order. Let them go to your house, not mine. I value my freedoms, what's left of them.

Because the application of the act is highly partial. Police officer buys scanner for hobby interest? Fine. Arrested person found in possession of scanner and scanner is confiscated and a charge for an offence under the WTA 49 may follow, whether or not the scanner was being used. My point is that this state of affairs is unsatisfactory.

I have done the above mod to the R10, but be warned, there is not much
room inside the receiver and the discriminator audio is pretty low
level, it does not work with my home brew data slicer but works very
well with one I got from http://www.pervisell.com/

(found the same low discriminator audio problem with my BC245..)

Sorry Mike, total and utter bollocks. See other follow up to your drivel for
a good explanation.

my friend bought a 220xlt back from singapore or hong kong (cant remember which) and it works fine.. the mobile phone freqs are not blocked either!.

It would be a handheld unit. Finding a power pack wouldn't be too hard
either as most of these units work on 6Vdc.

Thanks for all the info :)

Frequency inversion scrambling defeat method.
Just a note that if you have a scanner/receiver that does sideband: You've heard the cordless phones that scramble with freq inversion or the police dept freqs that do the same ?
If so and you have a scanner that does sideband (ie. IC-R10) you can, while on the freq where the conversation is taking place, set the radio in AM upper SSB mode and increment at .1KHz steps until you hear the voices come in loud and clear.

The trick for this is to locate "any" fixed transmitter in the immediate location and get it's lat/long coordinates. Then query the FCC database using the lat/long/service query for "point" and radius. EVERY fixed transmitter must be registered. Then you can get up to 500 lines of records as the result. This way you concentrate on who is a registered transmitter in the area as opposed to who owns the license to transmit in that area. You'll probably be surprised at the registered licensees......good luck.....Mesa, Az..hu?....

The greenfield fire station is 332410N 1114409W and a 5 mile radius around that point shows everyone including the NEXTEL trunked systems with 73 trunked frequencies (YX - Trunked SMRS), licensed to NEXTEL LICENSE HOLDINGS 4, INC. out of McLean Virginia. I'll bet the employees there use NEXTEL for their communications, especially that instant communication feature that comes with their cellphone......enjoy......

Just wondering -- how does FRS compare to CB Radios in terms of
usability, distance, etc. Seems like a 4w output AM CB should
outperform a .5w FM FRS -- any ideas on this?

I agree. I overheard one sales guy mention to a customer who wanted a
Trunk Tracking scanner to track police traffic not to bother because
all the county is on Motorola digital. He could just as easily sold
him the scanner and let the guy learn for himself.

It seems like this would be rather simple to do (although I don't know how to do it). The benefit of entering on the PC rather than the scanner keypad would be great. It's is also nice to have a backup of your scanner memory in the event of a catastrophic failure. I'm also thinking that keypad entry of alpha tags might get old after a while.

I would like to see something a little better than WinScan which has no copy & paste capabilities. It would be cool to make something that was either Access or Excel compatible.

Lets not have any fights at RS on the day the Pro-92 is released, OK?

Happy Scanning!

New in box not used, Radio Shack's PRO 2066 mobile Trunking Scanner.
This is a very nice scanner with a metal cabinet, very compact.
All accessories (mounting bracked, DC powere leads, screws) for mobile
installation are included.

This is primarily of mobile use.

$150.00 Plus UPS

Repost:

Folks,
If anyone is interested in the definitive list of NYPD precinct
frequencies, I have posted a verified list.
Although the new plan has been documented elsewhere, the actual NYPD
implementation differs for some of the precincts.

I have created this list through actual monitoring:
http://bsartist.com/Radio/nypdpct.htm so this *may* be the most accurate
list yet posted.

Enjoy. For those of you with ARC8200, there's a mem file there for you to
download.

>He could have reset at least 2 accidently triggered alarms in the time that
>dispatch took.
>Oh no, the cat's caught up in the tree again gotta call 911.
>dk
>

Weird calls are a fact of life for a police dispatcher. I could (and should) write a book. I work as a police/fire dispatcher for a town of around 18,000. You would think we wouldn't have so many wierd calls, but we do.

First of all, I'd say that around 75-80% of all 911 calls are either non-emergency or low priority calls, such as "there's a dog digging in my garbage" or people dialing their phones wrong. It never ceases to amaze me how defensive people get when you told them they dialled 911. "I did not! I was calling the 913 area code!" It's like you told them they kicked a puppy or something.

One of the funniest calls was the drunk that called up one night and said that someone stole his house. This alone would have been funny but a couple nights later he called back and reported that they brought it back.

We used to have an elderly lady in our town that called up several times on every shift, every day to tell us that someone next door was using some kind of machine to torture a small dog. She always said that the machine shook her whole house. Sadly, she suffered a stroke and died a couple years ago. It hasn't been the same since.

A lady showed up in one of the local motels claiming that the CIA was after her. She also claimed that the cable box and mattress in her motel room were putting out radiation that was hurting her health. We sent a couple officers to speak to her, and after they left she called back & told us that they were really CIA agents who had infiltrated the police department. When the officers returned to the station, we asked them if the CIA has good benefits.

The CIA is also watching another of our citizens. He once told us that if anything happened to him, it was because the CIA had him killed because he is working on teleportation experiments. To this day he is still working on building a teleporter. Hmmm, if he disappears, will it be because he teleported himself somewhere or did the CIA get him?

And not too long ago, a lady called up saying that someone from our city who was sent to prison was eating people's minds through TV sets. Apparently he

was mad because nobody testified in his behalf, so he decided to eat the fibers of people's minds. She went on to state that the people you see on TV eat your mind. Hmmm... I could have sworn I had something funny to write here, but after glancing at the TV I can't remember...

Once when working dispatch for another county's sheriff's department, I received a call from a man who said that someone showed up on his doorstep that morning claiming that a bunch of people in cars, led by his ex-wife, were chasing him the night before, and he spent the night in a field. I sent the deputy to talk to the guy, and he ended up giving the guy a ride home. I didn't think anything more about it until the very next morning, when I received a call from another man in a completely different part of the county claiming that someone showed up at his doorstep. This guy was also claiming that a bunch of people in cars, led by his ex-wife, were chasing him all night. I sent the same deputy to speak to this guy, and surprise! It was a completely different guy. We figured there were either some bad drugs going around or else there were a bunch of invisible cars driving around the countryside chasing unsuspecting individuals.

And the cream of the crop is the following call I received. I received a 911 call from a family that is well-known to us. A teenage girl said that her mother was having trouble breathing. She herself was coughing. So I transferred the call to the county to dispatch an ambulance. The weather had just started turning cool, so we were thinking it was carbon monoxide poisoning. The two officers we sent down there told us a different story when they returned to the station. This family lives in a particularly run-down house, and cockroaches are a problem. It seems they set out two bug bombs in their house before going to bed. The results of breathing bug spray was that they all took trips to the hospital. The funny thing is that these people home-school their children.

Sorry for the length of this post, but I just wanted to share some of the events that make this job worthwhile. The next time you run into a public safety dispatcher, ask them what their weirdest or funniest call was.

Tom

>Yes, the RS " on glass " scanner antenna was just the worst I had ever
used.

Hmmm... Interesting.

I just bought one yesterday, and it works fine! Maybe they changed them
somehow?

Of course my idea of a good scanner antenna might be different from yours
too... I don't want the gazillion DB super high gain model, because the 895
and 245 I own are both super sensitive radios and get hammered by all the
pagers, cellphones and noise here in Phoenix. With the RS scanner antenna, I
noticed very little overload, but also no lost or scratchy replies from
mobile units in the area. Overall, a good antenna - much better than my
larsen cellular antenna that it replaced.

They also sell the first cassette adapter I've ever tried that my GM stock
P.O.S. car radio didn't spit back out. I've bought all kinds from the 5.99
kmart specials to the 25.00 high end brand name ones, and had to return them
all. But the cheap little 10.00 RS one works perfectly. I was pleasantly
suprised...

I still don't recommend their mag mount antenna - the base is too narrow. If
you go more than 60 mph it'll blow right off. But the glass mount works for
me.

Could be. Ya never know. I do know that such a system is in the planning stages now for Phoenix PD though, so it will be SOMEWHERE on the spectrum..

The main reason for my post was to see if it had been done successfuly somewhere else.. Maybe learn from the experience of others before I stab blindly at a suspected frequency.

So far I haven't gotten an answer on it. Someone has to have done it! Anyone?

2453. Icom R1 internal battery question

Newsgroup: rec.radio.scanner
Date: 1999-08-27 00:00:00 UTC
From: Tom@Ytram.Com
Message-ID: <37c7dab9.79436733@news.cstone.net>
Source record: 108704

Hi!

According to the manual for the R1, the internal battery is disconnected when you connect an external battery. This does appear to true, if you remove the external battery and turn on the radio (in other words, run on the internal battery), the radio turns off if you press on the copper spring (just like an external battery does.)

My question is this: When an external battery is connected, and the radio is being charged via the power jack on top, does the internal battery charge as well? Or, is the internal battery disconnected and in order to charge it you need to remove the external battery?

Thanks!

Wow, what a great tip! Thanks!

I'm suffering from information overload at this end though. My zip code here at work includes South Mountain. 6446 rows of data found based on the lat/lon coordinates. But still what a list! Going to save it off and condense it into a dbf file for searching.

Thanks! I love it! Try this one guys, it's a blast!

Huh, come on Huggster, I thought you were a HAM. I know several police agencies and some city agencies that still use low band.

> Now...just how did this happen ?

Well if you have one of those scanners that scans all channels within a frequency range, it could happen easily. There are a number of scanners that have buttons for each frequency range (i.e. low band, high band, uhf low, etc.) and push the button. The scanner then scans through the entire range in that band. If you push the low band switch you would scan through the entire 49 mhz range. Not only would you get the "commercial" frequencies, but the older portable phone frequencies also.

>

The book for mine, an older model made in ancient times when cellular reception was legal, says

"NOTE: When an optional battery pack is attached,
the internal battery cannot be charged."

The service manual shows that when the button under the copper colored "G" terminal is pressed it cuts off the negative terminal of the internal battery from everything except the "G" terminal itself.

2459. Palm Beach Offshore Grand Prix Radio Info.

Newsgroup: rec.radio.scanner
Date: 1999-08-27 00:00:00 UTC
From: mrspadea@aol.come.ch

Source record: 108710

Radio Communication Information: PB Offshore Grand Prix, Florida
Aug 26-30 1999

The Boat Race Parade is set to start here at 7:00 PM EST,
Coordination of traffic and crowd control is via the PB County Sheriff, Lake Park, North Palm Beach, Riviera Beach Police and the Florida Marine Patrol.

PBSO:
154.8450 North
154.7250 HQ
154.6500 Admin.

The Admin. channel is quite active this afternoon, North and HQ channels are still business as usual.

Riviera is using an old frequency of:
155.8500
For Road Crews and Barricade Crews.

North Palm Beach and Lake Park Police have traffic control from North Lake Blvd. to Silver Beach Road on US 1, the Sheriff and Riviera assume control from that point to the Blue Herron Bridge and over to A1A.

North palm Beach Police:
156.0900

Lake Park Police:
155.9550

The Intercity Channel is also active:
155.3700

The Riviera Beach Fire Department is active on:
154.1300
154.2650

The FD is participating in Life Saving Services as well as the parade itself.

The FMP is active in patrol and security but they operate on the new Digital ASTRA System which is beyond the capabilities of this and most hobby scanners.

Coast Guard, Lake Worth Inlet and the Jupiter Section are active on Marine Ch. 16:
154.800
and 22:
157.100

There is quite a bit of activity on the FRS bands, especially around Channel 6 and Channel 11

6:462.6875
11:467.6375

Ch. 6 is holding Civilian traffic control and parking at the VIP area.
Ch. 11 is used by Private Security and some vendors in the parade.

The remainder of the FRS channels are quite active as well.

As of 7:08 the Parade is now passing over the Blue Herron Bridge with the tail end still into Lake Parks jurisdiction.

Hope to see an exciting but safe race this weekend, should be action packed with such a variety of crafts and contests.

Hope this is of interest to Palm Beach Florida Scanners.

>> >

Gotta side with Huggy on this one: Bullsh--. There are no law enforcment agencies in this country that use 46 and 49 Mhz for police traffic. The FCC forbids it. No, that scanner almost certainly has the portable phone freqs in it. I know many people both in and not in law enforcement who monitor their neighbors calls this way. Depending on where you live, you never know when you might catch them plotting some misery for you (especially when you tell them to have their dog take a crap in someone ELSES yard for a while).

>> Now...just how did this happen ?

While this is so, most of todays preprogrammed models don't scan that range when you push Police, Fire, and so on. It's not allocated for public safety use by the FCC!!

>> Sounds to me like they make it a habit to listen to there neighbor's
phone
>> calls....(after all, why else would the freq.. even be programmed into

>
>Remember what happens when we ASSume things

Well, again, I agree with Huggy. Lets say these neighbors didn't threaten him, but instead plotted to rob the local grocery store or bank. You can't tell me the cops wouldn't have been waiting for them at the appointed place and time, acting on a "tip".

>>
>> Don't get me wrong, not that I'm glad in this case that something wasn't
>> done, but come on...should a police officer and a correctional officer
make
>> it a routine part of there day to listen to there friends phone calls as
>> entertainment ?

No! They of all people should know better. Personally, had I just happened to wander onto my neighbors phone call plotting against me, I'd deal with the matter myself when they attempted to do so. Then it's self defense and the scanner is never mentioned. And that's if the threat is carried out. Most death threats are not. Testifying that they heard it on the scanner is just stupid, and they should have been charged with that crime, as were the Newt Gingrich and Tom Cruise monitors last year.

>
>Don't know if they were doing this, or is it guilty until proven
>innocent for non cops only?

Didn't you read the story? They ADMITTED hearing it on the scanner, even going so far as to TESTIFY to it in court. Try this next time you are in court: "Well your honor the ticket said 65 but I was so drunk at the time..." and see what he says. I once made the mistake of testifying that I had a prior no-proof of insurance ticket in another city. (I had an accident in one city and got a ticket in the adjacent city on the same day - ouch). The judge gave me a look like "why did you say that?" and stated the mandatory fine for the second offense was $400, instead of the $80 I was charged in the other city. Nice. But I had no one to blame except me and my big mouth. It should be no different for these folks, cops or not.

Pro 2006 with OS456 (original-not Lite) including Scan Star Deluxe software. This unit is very clean and has had very little use. The backlight was turned on occasionally just when needed for a few minutes. $600

Pro 2022 with 800 mod, and several Bill Cheek type mods including 3200 channels (200 ch x 16 banks), adjustable delay via front panel, tape out jack on back of unit, interior of plastic case coated with metallic paint to reduce interference. Again low use. This one has been in the closet for the last 5 years while the 2006 sat on my desk not getting used. $200

I have lost interested in the hobby and don't have time for it anymore. I am in the Denver area. Sale will be by postal money order payment, then I will pay shipping only in the US.

Please email for additional information!

Your talking about the effects of the modulation not the modulation itself.

In AM the circuitary is designed to adjust the level of the carrier. In FM
the frequency is adjusted. We are talking about the modulation method not
what the result when people refer to AM or FM.

2480. Need MOD for BC70XLT

Newsgroup: rec.radio.scanner
Date: 1999-08-27 00:00:00 UTC
From: gunnerk98@earthlink.net
Message-ID: <37C7806F.374E84B6@earthlink.net>
Source record: 108731

Someone told me there is a modification for the Uniden BC70XLT scanner that will allow it to receive in the 800MHz range (instead of its factory 512MHz limit). I am NOT interested in receiving cellular frequencies, but I would like to receive the fire frequencies in the L.A. area, which are in the 850-860MHz range. Is there a mod for this radio and, if so, where can I find it? Thanks in advance.

John

>

Who knows what clueless people see? If you want to listen to cell phones, then you know what model to get. The UBC model doesn't have the 30K step for cell phones but it is so fast that it works well with 5K. You might lose the scanner to customs but that is a very remote chance. You might have to pay $30 for customs fee, too.

The problem is that all of the frequencies are backwards so when you
hear something, it will be upside down. However, if you hold the
scanner upside down, everything comes out just fine. Either that, or
just stand on your head. You seem capable of that.

For anyone interested I have a good supply of serial interface cables for the BC895XLT. They are brand new, quality made, 6 foot long. I have about 20 of them right now and I am selling them for $17.00 each and $4.00 shipping via US Mail Priority (3 day) with tracking number. I have seen them as high as $36.00 for a six foot cable. Since these are well made and brand new the price is not bad if you don't have the expertise to build one yourself. If you are interested please contact me via Email at EDatBCFR@aol.com. Please don't reply here because it is unlikey that I will see it.

Thanks!!

Sounds a little like my story of the SP-813 Sprint digital answering machines I bought from them. 9 months after purchase, almost nearly simultaneously, both answering machines experienced a lock-up problem. It seems when these machines get full, and you go to try to delete messages then, it has to re-sort/re-stack the messages. (Follow? Like you're e-mail program compacting read/saved e-mail.) Okay, so when I'd go to listen to past saved messages, I'd find them suddenly blaring back at me the most irritating of screaming, whistling, and buzzing noises in amongst some of the messages. This is the first clue something worse is going to happen. If the machine gets full AGAIN while you're away, and you then try to delete some messages, this time one of two things are going to happen: 1) more messages will be screwed up like that, you're display will display something strange and you can't reset it, or change the time, or record a new announcement; or 2) the display will display something freaky -- in my case "FO". (I won't go into what my _first_ thought about what the answering machine might have been telling me there. This is a family newsgroup. 8-)) AND, now you won't be able to do ANYTHING with the machine at all. Its totally locked up.
They both had failed about a week apart. I took the first one in and they sent it back to the JAX office to have it looked at, or replaced -- but they would not tell me if I could get my money back until after they'd looked at it.

While that one was away, the other one failed, in the same way as the first. I took THAT one back to be repaired. A week later I got the first one back and, when I asked them what JAX said the problem was, of course, they didn't know. But they would not allow me to get my money back (being still in warrantee), and said I could have a REPLACEMENT. So I took it, with much complaining, though.
I told them that that's TWICE that two different this answering machines had the same type of failure. They tried to tell me that I was the only one who had reported this kind of problem, ever, with those machines. I told them that if two machines fail at the same time with the same problem such as this, then there is obviously an INHERENT problem with the machines, and they are faulty, and that I thought they knew darned WELL that there was a problem with the machines and that I thought they were hiding it.
The second machine came back and...of course, again...they had no idea what the problem was, and again I couldn't get my money back (even though it too was still under warrantee). I told them I believed them to be selling defective products deliberately.

So, I'd like to know anyway...has anyone ELSE had these same nonexistant problems with the Sprint SP-813 digital answering machines?

Todd

Ken M. wrote:

>Headline: Scanner picked up plot, say couple
>Subhead: Neighbor sentenced in assault, but
>charge linked to calls dropped; Phone death threat reported

I just read that, and I have to say that that REALLY stinks! A LAW ENFORECEMENT OFFICER breaks the law regarding the reception of portable phone conversations, and HE'S allowed to get away with it to help HIM with HIS personal problems. But not the rest of John Q. Public. That STINKS.

I heard MY neighbor brag about how he had shot my cat with his pellet gun, laughing about it to his girlfriend. Also overheard drug buys, drug descriptions, admissions of deliberate damage to my car, to the house, to neighbor's homes, to things stolen from our garage, etc. Called the police. They were ready to set up surveillance of the guy's house. Last minute, the lead officer tells me he thinks he remembers hearing something about the laws regarding port. phone monitoring having just been changed within the last year. (This was a while ago.) He asked if I could go to the library and check before they got involved in this, just to be on the safe side. I did, and sure enough, they had changed. Monitoring and divulgence of anything heard over portable phones and cell phones was a crime now. (And it didn't sort out when it was appropriate and when it was not.)

So my neighbor got away with all the stuff we'd caught on tape.

That pi**es me off, man. That really does.

More about it here: http://www.afn.org/~afn47120/pets/bran.html. Please read it entirely before responding with "what were YOU doing listening," please. Find out why, first.

If an off-duty officer, not involved in an investigation, not holding a warrant or similar to allow him the priviledge to do so, does this...when the general public can't, THAT sets the WRONG precedence of law. And that really gets my ire.

Another example of priviledges earned under color of law. I sympathise with his situation. But I don't understand why he

can listen to and record conversations from portable phones and use them to start a police action, when noone else can. Someone please explain that to me...keeping in mind what is mentioned in the paragraph directly above this.

Here's what SHOULD have happened...and its a suck story, too, unfortunately: the officer is arrested for breaking a federal law - regardless of the content of the conversation. The parties who spoke that stuff on the portable phone should have been set free, and the evidence against them ruled inadmissible, because it was obtained by illegal means. It sucks, but that's how it SHOULD have gone. I don't know where this Judge came from, but the lawyers did a real fast-talking wing-ding of a job on him, and this case CAN be overturned easily.

If that officer listened to it while, say, fixing his daughter a sandwich in the kitchen, and he was off the clock, and not a part of an ongoing investigation whereby he had reason to be listening...then he was listening illegally. If he was part of / assigned to an ongoing investigation...then okay. But it doesn't sound like that was the case.

I can't stand hearing about the prviledged getting priviledges over the rest of us. If they can do that, so should we be able to do that.

And I still miss my cat.

Just my disgruntled two cents worth. Sigh. (breath) Okay. I'm back to calm now. Fire away.

You might want to try the below link:

http://www.uniden.com/docs/product/

Once there, if it connects..I had trouble connecting this morning... you can go
to the BC3000XLT section. They use to have a .pdf manual there which will help
you with your UBC model (99.5% the same as the BC model)
Hope that helps !

The following are he 2 web sites where I found the modifcation.
The first has an very good pictorial, and the second an actual
photograph.
http://www.mindspring.com/~jtsmith/ic-pcr10.htm
http://www.bekkoame.or.jp/~hacker/pcr1000/ic-pcr1000.html
The mod is straightforward, just have a clean uncluutered well lighted
area. And some good magnafiers. I use the weller temperature
controlled soldering station, with the finest tip.
I hope this gets you pointed in the right direction.
Just be sure to back up your EEPROM before doing anything.
The best starting point for the '1000 is at:
http://www.gcn.ou.edu/~jahern/home/pcr1000/
He has excellant links to all sorts of programs and data.
I like the backup restore program that can be found at:
http://www.mahy.demon.co.uk/
Good luck

I have a Larson. Pretty good performing antenna. The NMO mount
also is a ground and hot connection type mount.

But their mag bases really suck. I have a couple, and I've seen a
HUGE variance in how they hold to a car body. One NMO that I
got wouldn't even hold the Larson 'Kulrod' 2M whip, which while it
is long at 5/8 wave, is super thin. It would blow off my Intrepid at
a 55mph legal speed! But to be fair, I may have been given a
used mount repackaged by the dealer. Eventually I tore it apart
(it was useless anyway) and found it all rusted and corroded
inside. So I found some 'corner brackets' at the hardware store
and cut some new plated for it. Then bought 4 of the rectangular
magnets at Radio Shack and 'rebuilt' the base. Now it's my
strongest holding base, at least from Larson.

It still doesn't hold a candle to the Radio Shack CB or 2M Mag
Mounts. I'd love to get one of those bases and just put an NMO
mount on it!

By the way, after rebuilding the mount, I started thinking what it
would take to 'build' my own mounts... Wouldn't be hard to do!

Does the legality of my right to publish depend on my audience? I
think this is our disagreement. As far as I know, it isn't.

Just ask those nice folks at Cult of the Dead Cow what Back
Orifice2000 is all about. Yes, hackers can use it. So can systems
managers. It's the moral equivalent of a knife. It can be used to
cut your food as well as stab someone. Must a knife maker consider
their customers motives?

>> >...and if the security to your home and wealth is weak its OK to publish
>> >that to point it out?
>>
>> Yes, indeed it is.
>
>To the extent you will be robbed by every two bit crook. I don't think you
>are really being very honest.

So you would tell a police officer not to publish information on what
a slim jim is because many crooks will read about it and might use it
to break in to a car?

>You admit that Dan is supplying the information that is used to rip off
>DIRECTV yet it is OK with you. I don't buy it.

Suit yourself, but I think most would disagree with your assessment.
Science and Technology are merely information. We have a right to
publish these details. The use one makes of this information
determines morality. The information itself has no moral standing one
way or another. I shudder to think what our society would be like if
we ever embraced the concept of "forbidden knowledge."

>Jake, I guess we do agree to disagree. I do appreciate you discussing the
>issue and not tossing personal shots into the mix.

And the same here.

Simply because you are getting a service that is sold and you haven't paid for. Stealing is stealing why is that concept so hard for you to understand?

> One final point.

I don't think so.....

Your logic is if a person would never have bought it then it is OK to steal it.

I'm not buying it as an excuse for taking what isn't rightfully or legally yours.

From: Knut Otterbeck <otterbeck@c2i.net>
Message-ID: <WfXx3.604$I5.74630@juliett.dax.net>
Source record: 108646
Body handling: HTML body converted to readable text

You are right ,of course. I just answered the message without
changing to plain text.

By the way ,I was wrong! 12.5 KHz spacing is only applicable
in Europe ,and not in Canada or USA (where the spacing in the
cellular bands are 30KHz...)

The following snip is from a message from Jonathan Clough
(of Javiation ,UK) :

----Snip-----
AFAIK the US/Canada are the only two countries to use 30KHz
steps for cellular (maybe wrong just don't know of any others).
The UK actually uses 25KHz steps but 12.5 "offset" so most
people have to use 12.5KHz on scanners over here.

Sets such as the UBC-3000XLT, PRO-26, PRO-2035 (that was),
PRO-2042 (that might be), MVT-7100/MVT-7200 etc have full
800MHz but no 30KHz steps. To get the 30KHz you have to use
5KHz or 10KHz channel spacing depending on whats available.

Sets such as the PRO-62, UBC-220XLT also have "full 800MHz"
but no programmable increment steps. In these cases the
default step size is 12.5KHz. Not ideal for trying to "hit" 30KHz
spaced channels.

-----snip----

regards,
Knut Otterbeck

chili@pobox.com wrote:
> Any truth to some FAQ's I read which say scanners are not very good at
> picking up anything but the very strongest SW broadcasters?

Some truth. But you can't expect a receiver which covers a few
Gigahertz to compete with a radio which is optimized for a few
"paltry" Megahertz.

Part of the problem comes from people unwilling to experiment with
different antennas to get the most they can from the SW bands on
their HF/VHF/UHF portable. On some of these radios, a 10-20 foot
wire simply does wonders! But you can't make them too long as
the radios overload if too much signal is delivered.

> Can a top of the line unit like the AOR 8200 or Yupi 7100 receive
> shortwave as well as dedicated SW receivers?

No. But they can a very adequate job and allow you to tune into
hundreds of stations and programs. The best units I've found are
made by Yupiteru (7100, 7200, 9000). Other decent performers are
the AR8000 and IC-R10.

If you're looking for good HF pickup on the new line of micro
receivers like the R2, WS1000/WS2000, etc., forget it. Simply
too many sacrifices made to have hope of even basic reception
not to mention lack of SSB and 50 Hz tuning. On these radios
you will only get the strongest of strong stations.

> Or are the top of the line receivers like the Grundig 700 and
> Sony 2010 (?) more sensitive and better suited for SW than even
> the best scanners?

Of course they are. These radios are made for 0-30MHz only and
you happen to mention two of the best in their class.

>
>In what country is this happening?

Norway, Sweden and Holland are closing the NMT900 (Analog) Networks.
Close-down date in Sweden is set to 2000-12-31. Switzerland is
supposed to follow. Don't know about Denmark and Finland.

>:Now i have to find someting new to use it for.
>:Can i build it to a scanner for around 900MHz?
>:It is analog, handheld. Buildt in sweden
>
>I was not aware of any analog in the 900MHz band.

NMT900 has been around since 1986 in Scandinavia and some other
European countries. In 1995, the Swedish network had 1 million
subscribers.

The huge success (the 10-year prognosis was passed in ONE year!) of
the NMT450 system which opened in 1981 forced the then national telco
to build a second system with much more bandwidth. During 1985-1991,
this system was expanded to almost full national coverage, almost as
good as the NMT450, except in very un-populated areas.

>Has provision been
>made in your country for people such as yourself to switch to some
>other band?

Free transition to the same providers GSM network.

>Is it only 900MHz that is closing?

Yes.

>Is the 900MHz band
>required there for digital services?

Yes. Actually, the 900MHz band was already reserved for digital, but
in 1985, the GSM was still under development. So NMT900 became a sort
of interim solution (and a very successful one). The NMT900 freqs are
part of the GSM900 band plan, so there will be more spectrum available

to GSM service. With only 4MHz available for each of the three operators today (plus some more in the 1800:s), its needed.

/Marcus

There is a utility band from 72 - 76 MHz that may be of interest in some locations. An involved keyboard sequence to get older PRO-23's into this range appeared in Bill Cheek's Ultimate Scanner book. Newer PRO-23's, beginning with date code 4A4, probably cannot be hacked this way.

Depends what you want to do, a Yeasu 757 which is pretty widely availible
second hand is a great rig HF rig to start with.

I own a '95 GMC full size 4wd truck and run a radius m1225 mobile and bearcat 600 scanner with dedicated antennas for each. I get background carrier on the vhf highband in the 153.000-160.000 range. Any suggestions as to where to look to take care of this problem?
Thanks in advance,
Doug

The officer made a bad decision. He should have sought a wiretap warrant so the police could lawfully gather the evidence to which you had pointed them. Your tapes could have been admissible - see below.

> If an off-duty officer, not involved in an investigation, not
>holding a warrant or similar to allow him the priviledge to do

You're right about that.

> Here's what SHOULD have happened...and its a suck story, too,
>unfortunately: the officer is arrested for breaking a federal
>law - regardless of the content of the conversation. The
>parties who spoke that stuff on the portable phone should have
>been set free, and the evidence against them ruled inadmissible,
>because it was obtained by illegal means.

As for the first part, yes, the officer should have been charged. However, evidence illegally obtained by A CITIZEN is not the same constitutionally as evidence obtained illegally by THE POLICE. The Exclusionary Rule, based on the Bill of Rights, is intended to protect citizens against the awesome enforcement power of the government. A fellow citizen may be able to violate some of your civil rights as spelled out in particular statutes, but he can never by definition violate your CONSTITUTIONAL rights unless he is acting as an agent of the government.

So, if you illegally (under 47 USC 705, 18 USC 2510 et seq, etc.) record your neighbor's cordless/cellular phone conversations wherein he is breaking some law, you can be prosecuted for the recordings. Your recordings CAN be introduced in evidence against the neighbor anyway, because the warrant requirement only applies to monitoring conducted by the police. The police,

of course, would have a stronger case against your neighbor if they took your recordings to a judge and used them to establish probable cause for a wiretap, then made their own lawful recordings of the illegal activity.

That's a pretty poor argument. Kinda like the chicken and the egg. Before you begin unlawfully intercepting a mobile telephone conversation, how do you know that it will contain lifesaving information that you must divulge to someone else?

It's illegal to monitor, and while you may not be prosecuted for divulgence under the "emergency doctrine," you can still be nailed for the interception.

I really love my 895. Isn't Uniden smart enough to offer (and I won't expect royalties for the use of my idea) a factory or reseller installed upgrade? Send us your 895 (and a nominal fee) and get your scanner back with multi-track capability that includes EDACS. I would really love to see flash RAM upgradeable scanners. Not as much money in that racket I guess, huh?

The scanner covers 25 - 1300 mhz with NO gaps. All freqs within that range are covered and it scans at the rate of 50 channels per second. You can program up to 200 frequencies into the banks. I am including a $40 "Max 800" antenna (bought from Grove Electronics) designed to optimize the 800 mhz range, a second rubber ducky (along with the original) that is supposed to be the most highly rated available ($25), an AC adapter ($10), a 90 degree adapter for the antenna allowing use with the radio lying flat, and an outside antenna with mounting brackets and about 50 feet of coaxial cable with connectors on each end. (This antenna would probably cost $75 to replace, with the coax and connectors.) The unit is in like new condition, with box and manual. No scratches or physical defects. Works perfectly. Asking $340 and I will pay shipping, which will probably be about $20 with insurance. Email if interested. trunge@home.com

In a "classic" AM transmitter, From the audio stage (ie. the
modulator).

Newer AM transmitters (Capital Gold for instance) produce their
modulation in a totally different way.

FM has a constant power envelope whereas an AM transmission's power
envelope increases with the application of modulation.

Because of changing magnetic field polarity in Down-under it only works upside
down ;-))

But why not buying a model made for the european market?????? with full
coverage.
I don't know how much trunking systems capability is a must or how american
trunk-trackeras should work for you. Trunking systems are not much used over
here but most european models are more sensitive and more selective than the
american models :-)

Yep, and when we don't hear what they are doing on our scanners..... we can always see what they are doing thanks to the TV News choppers and their super duper zoom lens on the cameras. L.A. is very famous for this, I think they have just as many news choppers as the LAPD has patrol cars..... and yes, scanners are a key player in how those TV News choppers get their information.

Well, you assume the officer knew right from the beginning. I didn't really get that from the conversations I'd had. I think I'm a pretty fair judge of when people are being "diplomatic," "sarcastic," "over-the-head condescending," aren't listening, think you're nuts, aren't being serious, etc. I didn't get the feel of any of that. I think he legitimitely didn't know, either. (I was a paralegal student at the time and so he knew from the conversations that I made trips to the law library and knew where it was. That's why that suggestion from him.)

>Without explicitly warning him, he got him to do some research
and
>rethink things before anything got written down in the record.

The guy was definitely nice not to make anything of it after DISCOVERING that it was indeed illegal to monitor and divulge. But, in preceding conversations, he WAS asking lots of questions about where it was happening, vehicles that came and went, etc. They were definitely interested. He probably also sympathised with my situation. But I think it was probably the first occurance of this kind of a situation since the law had gone into effect. So, everybody was probably kinda "huh-whuh? what ARE the laws on that now, anyway?"

I'd assumed that they were okay to monitor up until then. I had the freqs programmed in, but hadn't used them in probably...a couple years. I heard it when I hit the wrong bank button on my BC-100XLT. I meant to hit 0 (local 2-meter ham radio repeaters), and hit 8 instead, where the port. phone freqs were sitting. I was typing a document on WP and wasn't entirely paying attention to where exactly my finger was.

When the scanner stopped though, and I heard that kid bragging about how he'd shot my cat one night, listening to him describe the gruesome way in which my cat died -- the last, long wowwing cry she made lying on her side with a paw extending and finally stopping, mouth and eyes open, and how she was disposed in a garbage can....Man. This was something to BRAG about? And to his GIRLFRIEND???
And all that because when he was 6 my mother yelled at him for climbing a baby tree in our front yard??? He stayed angry at her for 12 years???

Then to be allowed to get away with it.

Somebody please help me understand that. What's _wrong_ with our kids today?

Not sure if I mentioned it, but this kid went to West Point, later. Those are the kind of people we have in there fighting for us nowadays.

Todd

Well, it happened a number a years ago, now. The news article just reminded me of it. But its long since passed. The kid has moved away. We're living in another place now. But, later, as a result of things that kept happening to us, my CC-432 WAS used on a 24-hour basis pointing out at our front yard for many, many months. This kid and his friends had us paranoid and up at all hours of the night, waiting for what might or might not happen, but always did, eventually. That's the other part of the crime...in what they ended up doing to us.

Hi, Dave,

If you haven't already done so, check out Rich Wells' Strong Signals Resource page at http://www.strongsignals.net/, which will lead you to the PerCon Data Base search engine. There I asked for all transmitters in Sonoma, found one entry for Century Bay Area Cable Co, then clicked on the link to ask for all other frequencies licenced to them by the FCC, giving:

```
FREQUENCY CALLSIGN COMPANY NAME RS CITY
STATE COUNTY

Hmm. But I'd still have to decide whether I wanted a federal charge on my record. At the time? I probably would have done it. What that kid did was inhumane, cruel, senseless, and to MY cat - not my mother's (whom he meant to be directing all of this stuff at). MY car was trashed. MY 200-year-old Civil War era hand-made tools handed down to me by my grandfather were what was stolen from the container in the garage. Every time this kid "aimed," he "missed" (so to speak). And the person who was hurt was NEVER the intended victim. He was sloppy. But he didn't care, either.

FOR IMMEDIATE RELEASE
AUGUST 27, 1999 NEWS MEDIA CONTACT:
Meribeth McCarrick at (202) 418-0654

FCC ADOPTS CALEA TECHNICAL STANDARDS

The Federal Communications Commission (FCC) has adopted technical requirements for wireline, cellular, and broadband Personal Communications Services (PCS) carriers to comply with the assistance capability requirements of the Communications Assistance for Law Enforcement Act of 1994 (CALEA). Specifically, the FCC required that all capabilities of the Telecommunications Industry Association (TIA) interim standard (J-STD-025) and six of nine "punch list" capabilities requested by the Department of Justice (DoJ)/Federal Bureau of Investigation (FBI) be implemented by wireline, cellular, and broadband PCS carriers.

With the exception of packet-mode communications, the FCC required that all capabilities of the interim standard be implemented by the CALEA compliance date of June 30, 2000. The FCC required that a packet-mode communications capability and the six punchlist capabilities be implemented by September 30, 2001.

2573. Portable scanners no good for SW

Newsgroup: rec.radio.scanner
Date: 1999-08-28 00:00:00 UTC
From: chili@pobox.com
Message-ID: <7q8pqmpel1@nnrp01.ops.uunet.co.za>
Source record: 108774
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Any truth to some FAQ's I read which say scanners are not very good at picking up anything but the very strongest SW broadcasters? Can a top of the line unit like the AOR 8200 or Yupi 7100 receive shortwave as well as dedicated SW receivers? Or are the top of the line receivers like the Grundig 700 and Sony 2010 (?) more sensitive and better suited for SW than even the best scanners?

2574. Re: 30 Khz step possible? Help!

Nope, not as well... If you want to listen to a lot SW, get an SW
receiver. However, the AOR, Yupis etc. pick up SW very well if you have
an antenna up in the attic or in the yard.

Here is a follow-up to my original post:

The dim display and inability to store frequecies was a faulty capacitor C98. I replaced it with a 47 ufd/ 35 v capacitor. RS catalog no. 272-1027.

The squelch was acting up a bit, and a slight adjustment to potentiometer R81 fixed that.

These tips were published in an article by Bob Parnass AJ9S, which is available in sevaral places on the internet.

Here are some programming hints passed on to me over the week:

****
Clock: receiver off

press time button
key in time as 6 digits (123456)
press E at correct time to start the clock or correct the time.

Aux is just a way to start a tape recorder anytime that a particular frequency or frequencies become active. Never used it.
On Sat, 21 Aug 1999, Eric wrote:

Count: Anytime a frequency is accessed, the count increments by one up to 99. Press Manual with the freq in the display then press Count and you'll see the count for that particular freq. To zero it, press E. I just press manual 1(to go to channel 1), press count, Press E then Manual to go Channel 2

If I think what you call Service Search (the row of pre-labelled buttons on the left side (Fire, Police, etc.), to store a freq: go to blank channel (I put 30 in all my empty channels), Press Manual, Press the button for the particular Service and when it stops on somethinginteredsting, Press E, then press Resume to start again. In the Services, you'll see 3 hash marks (max) in the display. Thats for Low, VHF and/or UHF. I think the upper one is Low, middle VHF and the bottom one for UHF.

Remeber the Service freq are 20+ years old and much has changed. Very little activity in the Low bands on Police for example. You might go to your local radio shack and see what their scanners are set to. Don't buy their stupid frequency books--I found the ones for Oregon and Eugene on the WWW, but I can't guaratee you'll find them for your locale.

****

I wanted to compile the results here so if anyone else out there had similar problems, they could perhaps get some idea of where to start.

Many thanks to all that have helped me out!

Eric

2584. Re: Portable scanners no good for SW

Newsgroup: rec.radio.scanner
Date: 1999-08-28 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <wrUx3.5903$Pv4.3377@news.rdc1.mi.home.com>
Source record: 108785
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Usually the problem comes from people trying to use the supplied rubber-ducky antenna that comes with the scanner. They are typically tuned for VHF/UHF bands, and totally unsuitable for SW. Even the addition of a long telescoping antenna can make a marked difference on the SW bands! If you are into SW, you know that most serious monitors use a long wire antenna, thirty feet being the minimum, and some going out one hundred feet+!

That being said, a wide-band scanner is not going to do the job down in the SW spectrum, that a dedicated SW receiver is going to do. SW receivers are optimized for that particular use. Wide-band scanners are trying to be all things, to all people, which as you know is impossible. Some do better than others however.

Glenn writes:

> So you just advocate anybody should have the right to print and distribute
> anything?

Absolutely! A critical component to a free society is the free flow of information. If I am free, then I don't need to prove that what I intend to disseminate has a constructive practical application before being allowed to disseminate it.

Allowing restrictions on information has a cascading effect. No matter where they begin, they're soon ferreting out objectionable opinions. Just try to access a site that the ADL or the Southern Poverty Law Center disapproves of on your local public school's internet connection, and you'll find out that the filtering goes beyond smut.

Keep in mind that it is unlikely that a mainstream citizen will ever have to employ the protections of The First Amendment. Even in the most despotic regime will not attempt to suppress expression which is in no way controversial.

> Do you even know the definition of freedom? So far you have shown you don't
> have a clue to its meaning. I am sure you do great with conspiracy theories
> and UFOs but this is really stretching it.

You question Deeply's understanding of the definition of freedom. I think it is your concept of freedom that is warped. Freedom and security are antithetical to one another. It is considerably more difficult to combat criminality when the populace, including the criminal element, has civil rights. On the other hand, in a society where the monitoring and heavy restrictions are in place, the information and materials required for such acts as unauthorized reception would be very difficult to obtain, the chances of the illicit receiver being discovered would be very high, and the penalties for this (as well as any other offence) would be severe. Sure, you would not be allowed to do many of the things we take for granted, ie. driving to work alone in your car, smoking cigarettes, placing an item of religious significance on your work station, or telling a racy joke without fear of some ninny reporting you for "creating a hostile work environment". You would be oppressed, but at least you would have the comfort of knowing that if something is stolen from you (perhaps even a "service"), the chances of the thief being detected and punished are increased. Does this sound like the kind of place where you really would desire to live? I hope not.

> If the illegal activities that hurt honest businesses continue we can
> only hope so.

This raises several points.

First, a scenario. Let's say I share the following comments in the lunchroom: "The lock on the back door has been broken for quite a while, maybe if more of us complain about it management will actually do something about it". If one of my co-workers present at the time turns out to be a tweeker, and enters the building via that door that night, am I to be prosecuted as if I accompanied him in the burglary?

Second, my actual situation. Television programming, as it exists today, is of very little value to me. What cable and direct broadcast satellite have to offer is not worth the service fees they require, at least in my perspective. Indeed, if I cannot get a station free, I will do without that station.

Now, were I to start bootlegging service, I ask how the service provider would be hurt? Uncollected fees? That presupposes that I would be paying for the service if I couldn't get it free, but I have already stated that I would rather do without than pay for it. Either way, unauthorized reception or not receiving it at all, they will not be receiving payment from me. The argument of lost revenue crumbles.

Theft of an object is wrong because the rightful owner is deprived of the benefits of owning that object. Defrauding a contractor is wrong because, if he weren't servicing the party defrauding him, he would be servicing a client who intends to pay. A legitimate case of lost revenue.

Unlike a contractor's time, the number of receiving units for cable and direct broadcast satellite is not finite. No potential customers, who are willing to pay, are kept off because of bootleggers. Furthermore, electricity is the only "material" being used, and the disappearance of all bootleg receivers would not reduce these service providers' draw by a single picowatt! With this in mind, I cannot see how tv service bootlegging can be considered theft.

One final point. Do the presence of subscription tv services enhance the quality of programming, and would their absence diminish viewer enjoyment? The movie currently playing on HBO can also be found at the local video rental store, and it will eventually find it's way (with some editing, but with the storyline still essentially intact) to a channel I can watch with my rooftop antenna.

If everyone thought as I do, the cable and direct broadcast satellite industries would never have come into existence. Entrepreneurs engaged in these businesses would have simply invested their capital, time, and creativity into other enterprises, and made their money there. Hollywood would be producing the exact same plots they do now, the video rental industry would be larger (and less monopolistic) than it is today, and movies would make it to commercial tv quicker. I therefore cannot see anything "hurtful to honest businesses" in this

attitude.

> dedicated SW receivers?

These should be "top of the line"?????????????

> Or are the top of the line receivers like the
> Grundig 700 and Sony 2010 (?)

even these "fine portables" are far away from top of the line..... but MUCH
better than EVERY handheld scanner up to the kilo-buck-range.

> more sensitive and better suited for SW than
> even the best scanners?

NO!
BEST full-range scanners (for mobile-use too with a shoulder-belt) are coming
from Rhode&Schwarz cost only some 10kilo-bucks.

next line are the Icoms IC9000 and IC8500 and the AOR AR5000 wich cover full
range .
But all of these are table-tops.

i only want to talk with Bill Cheek to ask him
a question as i think he is the only one that would have
the answers i need.

i found a job i want to get but it requires that i be an engineer. i
know that Bill Cheek had told everyone here that he was an
engineer and had most believing him. i know he was not -because
he admitted so to me- and i simply want to know how to make
people believe that i am an engineer to get the job i want. this
is what he did so i know he could tell me how to do it.

so back off!

2594. 39 Mhz and 800 Mhz

Newsgroup: rec.radio.scanner
Date: 1999-08-29 00:00:00 UTC
From: kinky619@aol.com
Message-ID: <19990829181656.06586.00001690@ng-fp1.aol.com>
Source record: 108545

This is my reply to the recent replies to my post.
I live in California, the CHP operates on 39 Mhz. Cordless Phone Freqs. are on 43,44,and 46 Mhz to be exact. San Diego Police uses a 800 Mhz trunking system, 856-863 Mhz. Celluar phones operate from 869-892 Mhz.
I have a BC 895xlt trunk tracker. It was made after the law went into effect, banning the production of scanners with celluar phone capabilities.

I appreciate the information, but don't need "sounds like you like to monitor cordless and celluar phones."

Yesterday I needed some things from Radio Shack. I asked if they had any catalogs, and the clerk got one for me. Then he said that it would be $2.95. I thanked him and told him I'd pass, that I do not pay for catalogs. He gave it to me for no charge.

I do get good use from my catalogs. Before I go to the store, I check in the catalog and have all the numbers ready. Saves a lot of time.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Similar situation here. I went to local RS store and clerk refused to give me
catalog. Said "we got 'em, but can't give 'em out just yet." So I went to
another RS store, knew the manager and he happily gave me a catalog for myself
and my son. He did have to run them through the computer, at NO CHARGE of
course.

(PCS)
carriers to comply with the assistance capability requirements of the
Communications Assistance for Law Enforcement Act of 1994 (CALEA).
Specifically, the FCC required that all capabilities of the
Telecommunications
Industry Association (TIA) interim standard (J-STD-025) and six of nine
"punch
list" capabilities requested by the Department of Justice (DoJ)/Federal
Bureau
of Investigation (FBI) be implemented by wireline, cellular, and broadband
PCS
carriers.

With the exception of packet-mode communications, the FCC required that all
capabilities of the interim standard be implemented by the CALEA compliance
date of June 30, 2000. The FCC required that a packet-mode communications
capability and the six punchlist capabilities be implemented by September
30,
2001.

My personal favorite isn't a discone. I tried several and found the Monitenna by Channel Master superior. But if you insist on a discone, the Diamond is most probably your best bet.

Monitenna by Channel Master! Yes! Great antenna, I have had one up close to 10 years and love it! Out does the discone on most frequencies. Looked a bit flimsy but has held up fine. Discone is in the garage out of service for the last 5 years.

I found him brutally truthful and extremely knowledgeable about this hobby. I bought a Pro-2006 from him for much less than what I see them advertised for here. It arrived as he promised, and the unit is in fantastic shape. He offered me a service manual for the unit at half the price of a service manual from Radio Shack. But I went and plunked down my money with Radio Shack and they sent me a crummy photostatic copy of that manual. I should have bought the one Bill offered.

Bill Cheek is man of his word in my estimation. He isn't known for politeness and he'll tell you where you stand with him in a heartbeat.

But I actually respect that. No beating around the bush.

I wish him and his wife nothing but the best for the outcome of his current legal difficulties.

Michael,

When the same thing happend with my BC200XLT I used the opportunity to have a local battery shop open up the pack and replaced the NiCad cells with NiMH cells at a little more cost than a new pack. The difference in performance is amazing. You might want to check the yellow pages to see if there's someone near you willing to take on the job. One word of warning -- with the Uniden charger the NiMH cells charge in about one hour, and if you leave them on too long they get really hot and can self destruct.

Good luck!

Well, my method was pretty simple. I'm in Provo Utah, right next to Orem. Orem PD uses a Motorola Type II system, some people here had posted some frequencies they'd monitored Orem PD on.

I took that list of frequencies with me and went to www.perconcorp.com and used their datafinder application to identify who owned one of the frequencies in the range of utah county, utah, usa. I chose the "brief with links" option.

It identified that Utah County had been allocated that frequency, and showed gave me (among other things) a link to all frequencies allocated to that callsign.

I clicked on the callsign, and voila! A complete list of trunking frequencies. Unless I'm awfully confused, all freqs used by a particular trunking group will have the same callsign. the database PerConCorp puts online is always their previous version of the database you can buy from them on CD.

Standard disclaimer applies, I'm a network engineer not a PerConCorp employee, cronie, or lackey.

Ratshack salesdweeb tells me the new Pro-92 or Pro-94 is self-programming, I dunno if that's true or not.

Where I am, it can't be done while keeping your sanity. I have a decent amount of heavy RF which does overload my 3000. But you need to figure out the type and strength of RF in your area. If you live in an urband area, chances are you might have some problems but it also depends where you listen in the frequency bands. If you live in the "sticks", then I doubt you'll have any problems.

Since it won't be outdoors and subjected to the elements, you will probably get the best deal from Radio Shack for about $60. Sturdier versions are made by Diamon and Icom but they run about $60.

>
I can see why that would bother you. I'd much rather it was a "her" there
than a "him". :-)

Seriously, you have to make sure the adapter is intended for communications
equipment rather than just a generic power supply. Obviously, an adapter
for a calculator will have less AC line filtering than one intended for use
with a CB, scanner, or other radio item.

B.T.W. I'm a regular customer at my local Radio Shack (store 01-9428,
Stillwater, OK) and I'm quite happy with the quality of service. The sales
people are mostly techno-oriented (sic?) college students, several are
hams,(see the latest issue of CQ-VHF in VHF News for a blurb on a national
2-meter simplex storm spotter freq. Steve Miller - KC5TRR is a salesperson
at RS). They are quite willing to acknowledge that they don't have all the
answers and ready to utilize the experience and knowledge of their customers
(like myself). Not all stores are the same, no matter what the chain, some
are good and some s**k. The salespeople are required to push certain items
or services, its a job requirement, just like the guy at the burger
drive-through asking if you want a turnover or would you like to upsize your
order. For crying out loud, cut them some slack!! If you don't like it,
then don't go in!!

Source record: 108596

Try this at your own risk but it works great for me, I primarily use my 245 in the house and the audio leaves a bit to be desired. If you plug an external speaker into the headphone jack the volume is very low. If you ohm out the ground side of the audio jack you should find approx.10 ohms between this and the bnc connector. This is not the case with the internal speaker. By connecting the ground of the external jack to chassis ground you will restore full output to the external speaker, all this can be done without opening the scanner, there is a mod on the net to open the scanner and ground the headphone jack to speaker ground but alas, this will void your warranty. I intend to perform this internal mod when the warranty expires, but until then or if your may be a little squeamish, you may accomplish the same thing with a very short, thin, bare piece of wire wrapped once around the bnc connector and then slipped under the external speaker plug to make contact with the top of the jack. Done correctly you will not even see this piece of wire and it make all the difference in the world, it just about doubles the audio output. I leave mine connected all the time. The speaker plug and the ant hold the wire in place just fine. I would not recommend this for people on the go or in the car, but it works great at home on the bench. Experiment with different sizes of wire till you get it to seat well, thinner seems to work better, good luck and enjoy your newfound audio, Radio

:You are right ,of course. I just answered the message without
:changing to plain text.
:
:By the way ,I was wrong! 12.5 KHz spacing is only applicable
:in Europe ,and not in Canada or USA (where the spacing in the
:cellular bands are 30KHz...)
:
:The following snip is from a message from Jonathan Clough
:(of Javiation ,UK) :
:
:----Snip-----
:AFAIK the US/Canada are the only two countries to use 30KHz
:steps for cellular (maybe wrong just don't know of any others).
:The UK actually uses 25KHz steps but 12.5 "offset" so most
:people have to use 12.5KHz on scanners over here.
:
:Sets such as the UBC-3000XLT, PRO-26, PRO-2035 (that was),
:PRO-2042 (that might be), MVT-7100/MVT-7200 etc have full
:800MHz but no 30KHz steps. To get the 30KHz you have to use
:5KHz or 10KHz channel spacing depending on whats available.

I bought a UBC-3000XLT new and it had 30 KHz steps for cellular
from new. Although the display does not show 30 KHz that is the
step automaticly selected when receiving 800 MHz cellular frequencies.
I also have a PRO-2004 which works the same way after removing a diode.

:Sets such as the PRO-62, UBC-220XLT also have "full 800MHz"
:but no programmable increment steps. In these cases the
:default step size is 12.5KHz. Not ideal for trying to "hit" 30KHz
:spaced channels.

In addition to answering his question, what I said was "(Sounds like you like to monitor cordless and cellular telephones. That is a violation of federal and many state laws, you know.)"
What part of that is criticism?
Believe it or not, there are plenty of new scanner users joining the ranks every day and many of them don't know that monitoring cordless and cell phones is illegal. If you look at what I said again you'll see there was nothing judgemental there, simply a statement of fact.
At least my posting included information pertinent to his question, which is more than can be said about yours.

I'm sure you feel that the colonists who threw the tea into Boston Harbor should have been arrested and thrown into a British prison. Because of these malcontents we lost the privilege of kneeling each time the Queen goes by.

Up until about 25 years ago, any television supported by commercials was free to anyone with a TV set. Even the early cable channels uplinked their signals in the clear in hopes home dish owners would increase their ratings. Ever wonder why these channels now scramble their signals? In most cases the cable companies mandate it as a condition of carriage on their systems. The cable companies don't want a product they charge $$$ for to be freely avaliable to anyone with a satellite dish. Did you know most channels have to pay DSS to carry their signal and then DSS charges you to watch that signal (in some cases running up to 15 minutes of commercials every hour).

The cost of a single transponder (or in the case of digital, a piece of a transponder) is a small fraction of what the big networks pay to operate and staff hundreds of OTA transmitters, and they seem to do just fine with advertiser supported revenue. Mabey its time to throw the tea back into the harbor and make commercial television free to watch once again.

I remember going into RS to check out their trunk tracker scanners. I asked the sales droid what trunk tracking was and got an instant response: He picked up the scanner box and began reading the description on the side. After letting me stand there (for what seemed like several minutes) watching him read the box he tells me with an air of great authority that a trunk tracking scanner will allow me to hear any transmitter using a trunk mounted antenna. My son and I looked at each other, left the store, and busted out laughing.
PS: Why doesn't RS sell anything covering the 225-400Mhz range?

.obviously you don't understand marketing and profit...(;>).... Uniden could do any and all those things plus more but they are in the game for the profit. Adding an additional capability to "upgrade" scanners cuts their sales of new scanners. Only on new production items can they take a tax deduction for depriciation on the production facilities while an upgrade line is actually a profit loss. That's also why we won't see modularized scanners that would be the ultimate. Imagine ordering the modules (that would plug in much like the old calculators form Texas Instruments) or could be programmed with a magnetic strip card of the same era. That would drive the FCC bonkers since they would have to assign hundreds of ID numbers to the modules and understanding the implications of combining modules to receive and decode transmissions would bust their budget.....nope t'was a nice thought though.......enjoy...

Great South Bay Amateur Radio Club Amateur Radio Classes

NOVICE / TECH CLASSES - 2 hours theory & 1/2 hr. code

The Great South Bay ARC has scheduled Novice/Tech classes beginning
on Wednesday September 8, 1999. Classes start at 7:30 PM and
will continue to 9:30 PM every Wednesday for approximately 14 weeks.

All students are required to have the new version (Red Cover) of the
publication "Now Your Talking..." which is available at a local
Radio Shack or from the ARRL, 225 Main St., Newington CT 06111.

ADDITIONAL INFORMATION

All classes are located in the basement of Babylon Town Hall,
200 E. Sunrise HWY, Lindenhurst NY in the Emergency Operations Center
(ARES/RACES Room), access is gained via the door at the bottom of the
stairs at the rear of Town Hall.

If you are interested in attending a class or you know someone who is,
have them contact Phil Lewis N2MUN (516)226-0698 for further information
or just come on down to class. The class instructor is Walter KA2RGI.

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5)
PL required. You may also write to:

:Hello again...
:
:Bought a UBC3000XLT scanner recently, this little unit is great but the
:ducky antenna that comes with it does it no justice.

I found the same.

:1) I've read alot about handhelds having problems with overload once you
:connect an reasonable external base antenna to them and was wondering if
:anyone has had any experience with connecting a discone of some sort to a
:BC3000XLT?

What do you mean by alot?

I have used my UBC3000 in a car with a mag base antenna and I found it
quite good in the strong signal department.

:2) The discone will be in the attic hanging from the eve of the roof running
:30' of 9913 lo-loss coaxial cable. Any comments or things I need to know
:about this so far...?

Should work well as long as you are not in an RF congested area.

:3) I won't be specifically on one band but general interest scanning between
:25 - 1300MHz, can anybody recommend any particular brand of discone at a
:resonable price. What are my options here for a wideband antenna that cannot
:be too big as the attic is only ~6' high.?
:
:Thanks :)

RS sell a centre loaded telescopic antenna for when you want a big
improvment over the standard ducky and still be portable.

Icom's URL is www.icomamerica.com. You can get manuals by calling
425-454-7619 from 8 am to 5 pm Pacific time. They sell photocopies of
older manuals. I lost my R-1 manual any bought one here. I can't
remember the price, but it was well worth not having the frustration of
trying to program that user hateful radio without one.

Good Luck,
Jack

FYI:

I have owned the 3000XLT about 4 years now. I installed in my second floor den a RS 20 -176 Scanner Antenna mounted to a broom stick and attached to an old tri pod. About 10' of RG58u coax connects it to my 2006. From my location I am able to pick up Chicago 90 miles away. If I connect the 3000XLT it does over load but using the ATT feature helps.

The RS 20-176 is $19.99 in the New Catalogue and is 20" tall and would fit in your attic.

I have a Realistic 2026. Without warning the scanner decided to no longer work.
It will turn on (lights on display light up) but no actual display.
Any help would be appreciated.
Thank You.

>anyone has had any experience with connecting a discone of some sort to a
>BC3000XLT?

I very much depends on which signals you are surrounded by.

Where I live it's intermod hell on the VHF high band, but fortunately
my UBC3000 does a very decent job.
I also own a PRO-2006 and a UBC9000 and much to my surprise the
UBC3000 is the best performer when it comes to avoid intermodulation
in the 160 - 170 MHz region which is my primary target for listening.

On other bands like the 2 meter amateur band and especially on UHF
the PRO-2006 however does a better job avoiding unwanted signals.

Recently I tried a Yupiteru MVT9000 programmed with a selection of
relevant frequencies around 160 MHz. There is only one word that
can describe the experience using this on my location using my outdoor
antenna: Useless.
On nearly every frequence it was suffering from severe intermod
caused fra nearby ERMES paging on 169.700 combined with taxi data
channels. I have also tried an AR-8000 which performed better than
the MVT9000 but not nearly as good as the UBC3000.

But again this was a test aimed at frequencies around 160 MHz
and you may get a completely different experience on other
frequencies and at another location and with a different antenna.

There are so many parameters involved that the only relevant advise
seems to be: "Try it".

Regards
Per

That's funny I monitor those same freq's and have never picked up a single phone call. I listen to the CHP 39 MHz repeaters and the Orange, Riverside and San Bernardino County trunk systems.

To answer the question, I have had excellent results with the Radio Shack Center-loaded Telescoping Whip Antenna (2K cat pg 95, cat #20-006) which can be had for $9.95. I leave the "rubber duckie" on if I'm only going to listen to 800 MHz. When I'm planing on listening to 39 MHz I put on the scoping antenna and extend it all the way. If I go to the 800 system I collapse the antenna and the reception is great.

Happy Scanning!

Is there a way to find frequencies for a trunk system by extracting info from data channel? This would make discovering changes to a system and new systems much easier.

It would be cool if you could just program the data channel and have the scanner do the rest. At least it would be cool to have that option. If you miss a freq, the scanner enters it for you. If a freq is abandoned the scanner deletes it and adds it again later if is put in use again.

2659. Re: Las Vegas Freq's - Accurate/Recent Info?

Source record: 108630

regarding Las Vegas freqs... frankly, most of the net information is either slightly inaccurate or out of date. for TRS, this site is by far the most accurate of all that I've found....

http:/home.att.net/~whitby/nv.htm there are 16 frequencies on the TRS fire system, quite a few net sources list only 15. city and county fire are on the same trunked system. there are also a few more IDs than listed at that website.

you'll find the Fremont Street Experience bike patrol fairly interesting, especially the names they give their patrol areas (e.g., "Area 51")

for Metro, try http://benham.net/scanner/metrocallsigns.html and related links as a start.

its just easier to list the active freqs here (Metro, NHP and Henderson -- NLV is TRS). the first few on the list correspond to Metro channels:

159.150 .. you'll generally want to lock this out.
159.090
158.970
158.745
159.210
159.030
158.790
156.210
155.910
155.610
159.120
155.085
155.940
155.555
42.940 NHP
42.880 NHP
154.920 Henderson
153.770
154.340
154.440
154.430

there are another 30 freqs that show up on the lists, but seem to be inactive

an interesting project I'm starting is to pick off the security freqs for the casinos.

Excellent point. My scanners (Pro-51, Pro-2004, Pro-2006) will not pick up FRS signals which are quite clear on my FRS units.

>Part of the problem comes from people unwilling to experiment with
>different antennas to get the most they can from the SW bands on
>their HF/VHF/UHF portable. On some of these radios, a 10-20 foot

I was doing laundry the other night in the basement. I ran a wire from my radio up to the water pipe. Now usually you think of a water pipe as a ground, not an antenna. In this case it made a very good antenna for my DX-398. That may just be my situation, YMMV. The key is, as you said, experimentation. What may be excellent at my location may be horrible where you live. I use a Slinky stretched across the room. Sometimes the noise level is so high I could cry. At your place a single Slinky might bring in every Brazilian station there is. Someone else might need to use two or three Slinkys.

To all: He's absolutely right and brilliant. EXPERIMENT! When you run a piece of wire across the room, it may not work. In my kitchen I obtained startling results by attaching the end of the wire to the center of the kitchen sink drain. Another guy said he attached the end of the wire to the inside of the microwave. Maybe that might be electrically unsafe in your opinion. Fine, but try different things. There are plans for a telephone wire antenna floating around. The point is, if you don't have 50 acres for longwires, you can make do with what you have. Just poke around until you find that sweet spot.

Using a telescopic whip my Yupi 7100 seems to have a little better
reception than my grundig YB400 while using it's built in whip.

This is based on testing done for about 20 minutes indoors using just
a few stations.

2678. ABC College Football Frequencies

Newsgroup: rec.radio.scanner
Date: 1999-08-29 00:00:00 UTC
From: dick832@aol.com
Message-ID: <19990829000523.28280.00000906@ng-fl1.aol.com>
Source record: 108669

During the Pigskin Classic, Aug.28 between Penn State and Arizona, ABC was heard using 450.1625 for the director talking to the camera operators, and 450.725 & 450.875 for communications between the broadcast booth announcers and the sideline commentator. Those two frequencies were basically the same, with the booth announcers stronger on 450.875 and Lynn Swann on the sidelines stronger on 450.725.

Yep, when I said Lo Band I was talking about the 40 to 46 Mhz band. My
goof.

Today's scanners yes, but there are lots and lots of old scanners out
there. The BC 560XLT for example is still sold (brand new in box)
locally for about $80.00. You can punch up anything in the 49 mHz band
with no problem.

Stupid? I don't know. Again you are assuming that they listened all
the time. I didn't read anywhere in the story where they stated this.

When were the people that taped Newt charged? They would also have to
charge the Senator that released the tapes, and I haven't heard that was
done either.

Be glad you weren't around here. 1st "no insurance" is $325, second is
$750. As to what they said in court, well there would be no case if
they didn't say how the information was obtained. Perhaps they thought
that stating the truth was the right thing to do, even if they knew the

consequences. Lots of posters in this group say that cops lie all the time (including you) yet when they tell the truth (and might have to face the consequences) you say they are stupid. Interesting.

I am not satisfied with my news reader. Is there a better way?

Can I use Deja.com like I would with AOL? That is news.deja.com
or something like that?

And how does one cancel a message that one has sent? Or modify
who might receive it? I am from the old school and used UNIX news
readers. The stuff with Netscape and Outlook leave me confused.

I'm not an expert but I am happy with Forte Agent........you can
download the freeware version (FreeAgent) and try it if you want.
But I think posting to Usenet is like posting a letter......once it's
in the system you have no further rights to it.
Have to agree on the Netscape and Outlook readers.
I sometimes use dejanews for the odd group my service doesnt
supply......but it is web-based and loads accordingly. I could be
wrong but I don't think it has a provision to keep your files.
BTW.....Agent/Freeagent is a pretty good email client as well.
Hope this helps.

Source record: 108675

My sole purpose is to receive. I don't need to transmit. Some
say the length of the antenna matters and some say it doesn't.
I mainly listen to 800 Mhz., but would also like to get good reception w/ 39
Mhz.

So, should I make my antenna as long as I can or not ?

Also, do I need a ground plane for my antenna ?

Thanks !

Thats a shame, because it's a damn fine software package and i'd love to run it rather than the dos s/w, but this machine, a 386DX-20 (with 2mb ram) won't ever run win95 or 98.

> So, should I make my antenna as long as I can or not ?

No. An antenna receives best on frequencies on which it resonates. It will be difficult to use one antenna and get the ultimate reception on both 800MHz and 39MHz. (Sounds like you like to monitor cordless and cellular telephones. That is a violation of federal and many state laws, you know.)
If you really want premium reception use two antennas and two scanners, one set up for each band. Cellular antennas are easy to find and work well on all 800MHz frequencies. A good CB antenna will take care of the 39MHz range, and if you really want to be picky you can trim it a bit to bring it into a closer match. Or you can get a dedicated VHF-Lo antenna from a commercial radio shop. There are plenty of wide band antennas on the market that work pretty well, but they all compromise a bit. It just depends on how critical or demanding you are.

Hello again...

Bought a UBC3000XLT scanner recently, this little unit is great but the ducky antenna that comes with it does it no justice.

1) I've read alot about handhelds having problems with overload once you connect an reasonable external base antenna to them and was wondering if anyone has had any experience with connecting a discone of some sort to a BC3000XLT?

2) The discone will be in the attic hanging from the eve of the roof running 30' of 9913 lo-loss coaxial cable. Any comments or things I need to know about this so far...?

3) I won't be specifically on one band but general interest scanning between 25 - 1300MHz, can anybody recommend any particular brand of discone at a resonable price. What are my options here for a wideband antenna that cannot be too big as the attic is only ~6' high.?

Thanks :)

AM stands for Amplitude Modulation, While FM Stands for Frequency
Modulation.
> >
> >If incorrect.
> >
> >In AM the modulating signal adjusts the level of the carrier.
> >In FM the modulating signal adjusts the frequency of the carrier.

You got this backwards. In AM (AMPLITUDE) modulation, the amplitude is
vairied by the modulation, while in FM (FREQUENCY) modulation, the FREQUENCY
of the carrier varies with the amplitude of the modulation.
>
> If incorrect.

Actually, sideband is still a form of Amplitude Modulation, but the carrier (and the unwanted sideband) are suppressed (the carrier carries no modulation anyway, and is just there to allow AM detection at the reciever end). What remains is the sideband, which is made out of almost PURE MODULATION. (Only about 30% of an AM signal is modulation, by the way). The carrier is re-inserted at the reciever end to allow detection, usually by a product detector. Sideband (SSB) is about 85 - 90% pervent efficient, and allows for half the bandwidth on the reciever, as opposed to an AM reciever.

As mentioned in Radio & Communications
the Trunk Tracker scanners from the US will not work properly in the
800MHz trunking band because the US phone freq band differs from
Australia, the blocked US phone freqs overlaps our 800MHz trunking bands
so you don't get all the trunking freqs which confuses the scanner and
you end up losing the followed TX/RX

Hello.

Interesting reading about RS personnel and service. Here's my experience.

I went to a local RS store here to purchase the cassette item you use in order to enable you to play your portable CD player in your vehicle. I had seen one earlier in another RS store for approx 25.00 CDN. The store was not busy and I was able to catch a salesman's attention behind the counter after checking around and not seeing the item. The salesman brought me back over to the rack where I had just came from and pulled a higher priced item out from the rack. I explained there was a cheaper version of the same item available and did they have it in stock. While I was explaining this, the salesman went over to another rack and started straightening it around. Not raising his eyes to me, he muttered something like "Nope..that is all we have". I was about to ask him to possibly check his computer or stockroom, but he was more concerned about placing some items on a rack, than he was in serving a customer.

In today's world, where prices are so competitive, it is the customer service which attracts us and keeps us coming back. I will (and have) driven several miles to stores which give me personal service and attention and whose salespeople show a real enthusiasm to assist their customers. RS is not one of those. I will not be back to that particular store or any other RS store for future purchases..even if their racks are all neat and tidy!

If you look on page 93 of the New RS catalog, in very very fine
print...magnification lens required... you should see... just under the text
for the Pro-92 add... a line which reads Pro-92a...accessories... that Pro-92a
is the item you are looking for. Pro-92a consists of a Large rubber band and a
dictionary. The rubber band is the attachment device which interfaces your
Pro-92 to the dictionary... hence your spellchecker. Not there ??? Oh...
maybe it's just in my RS catalog.....

One persons bad manners..... one store.... I'm sure there are other RS stores
that have more dedicated people..... I've been there, done that too..... but I
have gone into RS stores and tried a different salesperson and it makes all the
difference in the world. Maybe you should go back to that store and try
another person... making sure they know why.... As a manager I sure would like
to know if someone I hired was driving away business.
It's your choice but.... if you're driving down the road in your car and
someone cuts you off.... are you going to stop driving on that road ?? What is
the saying... one bad RS salesperson doesn't spoil the chain ......
Just a thought.... every person MUST do what they feel is the right thing.
Sorry you had your bad experience... and I do agree with you that customer
service should be a big factor in todays market.
Have a good one !

2700. Las Vegas Freq's - Accurate/Recent Info?

Newsgroup: rec.radio.scanner
Date: 1999-08-29 00:00:00 UTC
From: Ed Walsh <emw28@aol.com>
Message-ID: <7qbcpo$b3a$1@bgtnsc02.worldnet.att.net>
Source record: 108691

I have been conducting several web searches for some up-to-date Las Vegas PD frequencies. I have found a few web pages, but a lot of the info appears to be conflicting or showing revision dates of several years ago.

Can anyone lead me in the right direction for accurate LV info?

Also, am I correct that Las Vegas Fire is on the Clark County trunked system?

Thank you very much!

(To reply privately, please respond to: EMW-1 at ATT dot NET)

The service search is missing frequencies allocated for both the Police and Fire radio services. I've compiled a list of all the frequencies missing if your interested. Also, there is a keyboard mod to allow reception of the 136-144 Mhz band. Very simple to do.

Isn't there a way of producing a kind of amplitude modulation by varying the rf envelope by digitally switching in and out parallel rf amplifiers ? I confess not to having taken much interest in the "how", but if you're really desperate to know, then uk.tech.broadcast is the place to ask. I think you've have to keep a fair bit of carrier in there, or it would end up sounding like ssb.

AHA! So I was right....

OK, now if anyone in the area has a satellite receiver, one *should* be able to view the video directly off your satellite system. Being an apartment dweller myself, I don't have the facilities or equipment necessary for this.

The little directTV receivers won't do either - you need the full blown sattelite receiver for that band. DTV receivers operate around 12GHz I believe. Although homebrew setup using a DirectTV dish connected to a regular satellite receiver might still do, if you're close enough. Man I would dig that idea - you could set that up anyplace...

OR, but this is expensive, get one of those spectrum analyzers that has video output, and then look for that 10 Mhz wide signal - it would be easy to spot. If you had one of those, you could connect it to any VCR or TV with video in jacks...

If anyone anywhere can get this to work please post or email - I am very interested in this as we are scheduled to get our system up next year.

-Phil

Newsgroup: rec.radio.scanner
Date: 1999-08-30 00:00:00 UTC
From: Charley Harp <charp@htonline.com>
Message-ID: <rsm9deboj7115@corp.supernews.com>
Source record: 108400

For the record, DTV receivers and "full blown" satellite receivers accept signals at the same frequencies -- the L-Band at about 1 GHZ. The difference in their operations is in the LNB (low noise block) downcoverters in front of their respective dishes. Large satellite dishes (C-band) have LNB's that downconvert from 4 GHz to L-Band before sending it to the receiver. DTV (Ku- and Ka-Band) dishes have LNB's that downconvert from 12 GHz to L-Band before sending it to the reciever.

Neither type of receiver could detect any usable video from *only* 10 MHz bandwidth signals. C-Band receivers accept FM analog signals with about 24 MHz bandwidth and DBS receivers accept MPEG2 digitally encoded and encrypted channels multiplexed onto signals with about the same bandwidth.

Both systems require parabolic reflectors to gather enough signal strength for video. C-Band dishes have a beamwidth less than two degrees wide, in order to distinguish between satellites parked two degrees apart. Steerable dishes sweep only the arc of the Clark Belt above the equator. Pointing a dish at a some stationary object would be no trivial task, but following a moving aircraft would require military-level technology. I'd really like to know more about the omnidirectional antennas referred to in the notice.

To receive video transmitted at 2450 MHz you would need antennas and downconverters tailored to that frequency. Then the appropriate demodulation would need to be performed (AM or FM, analog or digital, decoding if necessary (MPEG, DC2, etc.), decryption if necessary, and finally conversion to NTSC for viewing.

You might as well waive your cable TV box in the air, for all the good a satellite receiver would do. I do have the necessary equipment to try doing what you suggest, and I know that it won't work. If it were as simple as you suggest, that's how San Diego PD would do it, rather than spending all those unnecessary bucks (hmmm, on second thought...)

Keep watching the skies!

Message-ID: <7qfho3$91bq$1@spnode25.nerdc.ufl.edu>
Source record: 108408

I'm in the process of updating the _Mobile Scanner and RADAR-Detector Laws In The U.S._ web page. Since its inception, hits have steadily been increasing until reaching now the current average of 5000 to 6000 hits per month. Not the NASA Shuttle Web Site but, pretty good for something originally meant to be used just for myself.

I get a LOT of technical questions relating to scanners and radar-detectors. Since I'm not that technically knowledgable regarding these devices (if you can believe hearing about a ham who isn't technically inclined), so I just refer these people to other technical sites which _are_ about them.

If you'd like for me to point to your site, please let me know who you are. Maybe I can help increase hits to your site. The sites should deal with technical aspects of either scanners and/or radar-detectors.

Not looking to put up advertisements at my site. Just links.

Thanks,

Todd Sherman

SMR = Specialized Mobile Radio - the early FCC designation for the trunked
radio services.
LTR = Transcrypt's (formerly E.F. Johnson) proprietary trunking formats.

the best way to pick-up the low bands and the
800mhg band is to use the 190 mile vhf and 90 mile uhf out door television
antenna at your local radio shack it is only 49.00 on sale this month. you
can increase the pickup range by about 1/4 mile possibly even farther even 3 to
4x that distance on the 900 mhg cord/less the antenna works best for
all tvs,radio fm/am; and just as good on any band on yourscanner.
try it?

This thread leads me to a question.

From my understanding of digital communications (such as a modem transmission) a break in the reception of the signal loses data. Various forms of error correction and redundancy exist to alleviate that problem somewhat, but basically it is safe to say that when one modem is listening to another, it can't stop listening temporarily to do something else, especially when (as is the case with scanners) the receiving end of the line isn't communicating back a handshake with the sending end.

The data channel of a trunked system is a digital channel, which means that it has a data-stream that must be listened to, and then decoded in such a way as to assist the trunk-tracking scanner in determining what ID is talking and what frequency that ID has been assigned.

Taking those two concepts one step further it seems logical that the scanner must always be listening to that data channel. If that's the case, then a scanner capable of tuning in one frequency at a time wouldn't be able to listen to two data channels at once. To do so would require a scanner with twin tuners, capable of tuning in two channels at the same time. At first impression as I think of how a multi-trunk scanner must work, I invision a scanner capable of tuning in multiple frequencies simultaneously much like high-end GPS's tune in multiple satellites at the same time.

But there are some holes in my theory, that I'm sure someone here can clear up.

If the standard trunk-tracking scanner can only tune one frequency at a time, and that frequency needs to be the data channel, how is it possible for me to listen to the voice frequency as the scanner continues to monitor the data channel? Does a standard trunk-tracking scanner already have the capability to tune in two frequencies simultaneously? Would a multi-tracking scanner also be a multi-tuning scanner?

And if that's the case, why is it necessary that the priority mode of a trunk-tracking scanner must interrupt whatever is going on to quickly listen to the priority channels? Couldn't the scanner listen to the priority channels much like the way it listens in on the data channel while trunk tracking, and then only interrupt the ongoing transmission on other channels when it hears traffic on the priority channels? What I'm referring to is the way many scanners when set to priority mode will have a tiny break in their audio every couple of seconds while they check the priority channels.

This inquiring mind wants to know. ;)

Just about all books and magazines about radio communications cover antenna theory.

"Novice and Technician No-Code Plus"©
author Gordon West; publisher 'Prompt Publications' (Howard W. Sams & Co. Indianapolis, Indiana) ISBN# 0-7906-1047-7 has 13 sub-headings under "Antennas".

Magazines like "Popular Communications"© (URL?) and "Monitoring Times"© www.grove-ent.com have articles in every issue.

The American Radio Relay League☐
www.arrl.org/ is another top resource.

Very basically, differences in antennas are directional v non-directional; gain v no-gain; random length v cut to specific frequencies.

I'd say go the discone route. The Omni is a dipole antenna so it
will likely be quite good in two or three narrow ranges but just
"suck the life out of the signal" elsewhere. But this is just
conjecture, having never personally used the Omni.

Excellent,

One more question :)

Is it ok to install some sort of junction box to split the coax from the discone to run another run of cable to another part of the house? Something like a T junction perhaps or do we start talking about too much loss ? The other run of cable will also be 30`.

It would be good to have another run of coax from the discone to the back balcony also :)

Thanks. :)

Sorry Phil, but don't go saying BS until you know.

I have a number of lo band frequencies in my scanner. And quite
legit. My local utilities are around 49, and police and fire are at 33
and 38. So I have lots of reasons to be in lo band.

Why listen to utilities? Well, we have been in quite a drought
recently, and about a week ago, we had heavy rains. Power
outages were quite widespread. First from accidents due to
roads that became slick and hadn't had oil and debris washed
off all summer, and in my own neighborhood, because the trees
drooped over the lines suddenly.

I knew about where the utilities were, so I just did a search from
48.000 to 49.995 and let the scanner go.

Before you spout BS at everybody, try to figure out what really
may be happening. They may not be operating their scanner
the way YOU would be operating yours.

While you can use a "T" in a pinch, it is much better to use a HIGH QUALITY
splitter. I have found that the ones designed for satellite L-band (940 to
1450) have the lowest loss. They are typically rated for 5 to 2000MHz.
The will pass below 5 but have a lot of loss from 10MHz on down.
Since scanners typicaly go from 30MHZ and up, they work great.
But be aware that even good splitters will cost you about 3dB loss per split.
If you are listening to weak signals, that 3 dB might make the difference
between a solid copy and nothing but a squelch break. I now run all my

lines to the "radio" room, receive them on the desired receiver, and rebroadcast them with an old Knightkit AM "wireless phono oscillator. With a 10' antenna on the AM TX I can hear my stuff for about 1000' on a walkman type radio. (it uses a 50C5 for the oscillator and I suspect that it may put out more than 100mW. This is stock as built by knight (allied electronics) back in the mid 1960s. My folks found it while cleaning up after I had boxed it when I went to college 25 years ago.
Lots of places sell little FM TXs that will cover your yard that will do the same thing, or find a "Baby monitor". They can be found for $10 or less at yard sales and, uless you are trying to monitor the 45-50MHz range, will do great.

Understand that a multi-tracking scanner does not listen to multiple data channels simultaneously. It just switches from system to system automatically after a timeout elapses (4 sec on the BC245).

The circuitry does NOT adjust the level of the carrier.

AM modulation does NOT affect the level of the carrier.

If you don't believe me, then believe Terman 'Radio Engineering' p532

"the first component of the modulated wave in Eq 4 is termed the
carrier, and is the same irrespective of the degree of modulation or the
modulation frequency".

Later:-

"The power of a modulated wave is divided between the carrier and the
sideband components. The carrier power remains constant, whereas the
sideband power varies in accordance with the character and degree of
modulation".

OK now?

Mike

There are a couple of different issues here. One is, what newsreader to use to access the newsfeed offered by one's ISP, and the other is, what to do if your ISP doesn't offer a newsfeed (or offers a bad one)? If you have the latter problem (as I do) then you use a web-based reader such as Deja or Remarq. I've used both. Deja threads a little better, and it archives things forever. It tends to go down alot, though. When it does, I switch to Remarq. It seems to load a little faster, but the threading isn't as great (It looks as though it just concatenates all the messages with the same subject line).

AFAIK, you can't just specify news.deja.com, or something like that, as the newsfeed for your local reader. You have to subscribe to their service - it's "free," but there are a lot of ads.

(Actually, I just remembered Deja will be offering something like that - local access to their newsfeed, with whatever newsreaderyou choose - but you will have to pay for it).

Eric,

Thanks for the reply. I want to be able to find out info about a data channel I happen upon while searching. I've found that "Trunker" is probably the way to go. I can find out everything I need to know by monitoring the channel for a while and plugging that info into my Trunk Tracker. I haven't done this myself yet but I've seen several websites that say this works like a charm.

I need to find out how to connect the scanner to the PC so I can read the data channel with Trunker. I do not need to control another scanner since I already have 3 TT scanners. If anyone has info please let me know.

Thanks!

I've often wondered why Uniden hasn't added this to their units. Anyone who is familiar with trunker knows this is possible. That is mainly what I use trunker for - let it chew on a data frequency all day while I'm at work and come home to a list of freq's, TG ids and a fleetmap - it's great!

However, in the case of the RS units, I don't know about "self programming". They may be using their own version of Smart Scanner, and that's what he's talking about. I seriously doubt the GRE made Pro 92 will do that, as it uses sub audible tones instead of reading the data channel. But anything is possible - the 92 sounds like RS has tried to think of everything. It might have that feature. Wow, look out Uniden.....

Last I heard, the latest proposal is to allow the FBI or other police, with warrant, to monitor 'connection' information. They already have the right, with warrant, to listen to calls. Now they can also get the info of what cells you were in for the call. Other than that, I don't see a major change in law.

HOWEVER there was a change in the wiretap laws to allow the interception of calls in conference, even when the original party that was the subject of the warrant or court order disconnects from the conference call or goes on hold. And I believe the 'connection' info applies to all parties to the conference call.

Source record: 108534

Yes

You would need an adapter to connect the coax into the BNC connector, you can get those at (Radio Shack).

Don't expect anything other than possible overload of the scanner.

The coax if connected to the Cable Company and carrying a signal will only interfere with and possibly damage your scanner.

You may be surprised to know that with that by using a short piece of coax and the adapter you can construct a very efficient antenna which usually surpasses the stock one that came with the radio.

To do so; divide 492 by the intended frequency/range in MHz.

Then you would cut the coax cable to that length,

Follow the cut by the removal of about 1/3 the insulation, being careful not to cut the wire braiding present nor below; just the outside plastic covering.

At this point you will roll the braided insulation down the coax, about 1/2 way should do.

Connect the coax to the scanner via the adapter and you can expect some improvement on reception.

There are several designs of home-brew antennas on the Internet and with some experimenting you may come up with something even better.

Hope this helps.

What are the units of measurement for the homemade antenna? Are they Inches? CM?
Oh yeah. you also put in divide by frequency/range is that 492/frequency like
uumm if the frequency I want is 492mhz then my formula would be 492/492=1 right?Or
am i misunderstanding?
Anyway, thanks for the info!

I had one that did that. It freaked out because in my relative newbieness (I bought it new when they first came out) I was tinkering around on it while it was powered up. Zap! D'oh!

If the reset doesn't work, you'll have to have it serviced or (better yet) get a new scanner. The 2066 is nice and is about the same size as your 2026. I think you'll end up spending about the same amount of money (and the scanner won't come back for about 2 weeks from service)

You might get lucky though and live near a shop that services 2-way radios. If you do, call them up - they will usually service scanners too. Prices might be higher than RS repairs, but they can usually fix something in a matter of days instead of weeks. Maybe pay a little extra for same day service....

Chuck Rowe wrote in message <37c9877c.162531769@news.uia.net>...
>That's funny I monitor those same freq's and have never picked up a
>single phone call. I listen to the CHP 39 MHz repeaters and the
>Orange, Riverside and San Bernardino County trunk systems.

Here's something funny - a bit of a quirk in my shiny new 245.

With the attenuator ON, listening to the AIR band, I can pick up my cell phone and listen to myself talking on it. Works for adjacent cars too.

Here's the kicker. Turn the ATT function off and my cell phone is no longer heard. (but then the other freq's get hammered by pagers and noise.)

It's kind of scary because part of my scan pattern is the local PD vhf-air frequency for PD helicopter chit-chat. Well, if there's a cell phone near by, that frequency will sometimes picks up the conversation! One lady gave me a real nasty look when she overheard herself coming thru the scanner audio (running thru the stereo system of the car so it's nice and LOUD...) I shrugged and hit lockout and her voice went away - then mercifully, the light changed and I was able to leave before hearing her finish her rant... I wasn't even about to attempt to explain that it was an accident caused by the scanner circuitry. The way she started carrying on you'd think I had inadvertantly stepped into the wrong public bathroom and walked in on her doing her thing.

I had to laugh. It was funny...

So what frequency range you are listening to doesn't mean you won't get one of those damnedable cell phones. After all, remember the days of dual conversion? 896 to 912mhz works on any current Sportcat scanner for cell phones.....

In fact, the wrong antenna will only serve to amplify the problem, I've found. Stay away from really high gain models - most new scanners will be next to useless in any urban areas connected to one of those antennas. Pick something moderate, like +2dB gain for mobile use, +5db for bases. That keeps the image interference down to a tolerable level, for me at least.

Of course, this is speaking from strictly personal experience. Your results may vary, contents subject to settling during shipment, void where prohibited, etc.

Hi Ed:

The fall meeting of the WI Communications Research Group is coming up. A few of us will be carpooling from the Minneapolis/St. Paul area once again over to the meeting in Wisconsin. If you or anyone else is interested in attending, drop me a note. There are only two of these meetings a year and are well worth attending.

Hi Rich,
Thanks for that info. I don't have too much rf as I live in the outer suburbs so i'm hoping that i'll get away with it. :) (The rf actually is on a few bands that I don't scan)

Another option is the Grove Omni II which I saw on their website. Has anybody tried one of these antennas? I may be able to get away with mounting this one outside due to its smaller size.

A discone inside the attic, or something like a Grove Omni II outside on the balcony?

Thanks :)

I have one Icom IC-R100 Communications Receiver forsale. This is a Scanner plus a Shortwave Radio. Its in good condition and had been installed in the dash of a Toyota 4-Runner. Owned by non-smoker.

Wideband frequency coverage 0.5 - 1800 MHz continously with FM, AM and Wide FM modes.
Multiple scan functions including auto memory write scan.
24-hour clock system with muliple timer functions.
A variety of tuning steps corresponding to any operating band. 1k, 5k, 8k, 9k, 10k, 12.5k, 20k, 25k.
800 MHz band NOT Blocked.

Comes with: Mounting bracket, CP-11 (optional) 12volt cigarette lighter cable with noise filter plug, original operator manual.

Asking $600.00 or B.O.

>to take care of this problem?
>Thanks in advance,
>Doug

I figured out one like this:
Take your port scanner and place a roll of aluminum foil (at least one
full wrap) over the antenna. This will make the ant directional to a
point. Walk around the truck pointing the end of the antenna at
suspect locations. Turning up the sqelch narrows it down more and if
it's still to sensitive take out the antenna.
This will at least get you into the correct area. (under the hood,
fuel pump, underdash computers, ect) then you just work from there.

Hope it helps

2788. Trunker

Newsgroup: rec.radio.scanner
Date: 1999-08-30 00:00:00 UTC
From: Dave Programs <programs99@altavista.net>
Message-ID: <37C9F45D.5EC76C0D@altavista.net>
Source record: 108587

I am new to scanners and want to learn more about trunker.

I want to make the scanners listed below to work with trunker.

Can anyone help me on how to get my scanner and computer to work
together.

These are the scanners I will have access to. (I would like to get one
of them to work - preferably BC760)
Is the setup the same for all?

Bearcat BC760XLT
Radio Shack Pro 2004
Radio Shack Pro 2005
Radio Shack Pro 2006
Bearcat BC245

2789. SMR AND LTR

When i ordered my 235xlt, I was somewhat concerned about the
"proprietary" rechargable pack it uses.

Folks, this isn't the least bit proprietary. Call me back and tell me
about proprietary when they release something akin to the fully molded
packs on Yaesu HT's.

Has anybody else considered the possibility of getting some Li-Ion AA's
and some heatshrink tubing and making a longer lasting, friendlier
version of Uniden P/N BP-180? Or even NiMH?

Yeah,but you were a schmuck for going to the cops.You should have
waited a while and settled the score one on one. I had a kid in high
school screw with me for a whole semester and got a three day suspension
the one time I did anything about it.He laughed...but he wasn't laughing
when someone ran a junk pickup truck with a 7"soil pipe bumper into the
side of his custom van the next year.

Rich,

Check http://www2.crosswinds.net/frankfert/~vlaski/

Goran Vlaski has a great, free software package for the R2.

Also, check http://www.dspace.dial.pipex.com/stephen.t/r2max232.html
for an inexpensive interface that you can build.

Good luck,

Jim....

This is the kind of thinking that has made me a sworn enemy of Rat Shack and I simply do not transact business with them. I don't. If they've got something and I need one, now, I am going to just have to live without it. I will spend a minimum order with Digi-Key or Newark AND pay for Fed Ex before I'll spend $1.29 at the Shack. I don't go there and I explain to anyone who will listen why I don't. Most people go there to buy consumer products and after I explain why Rat Shack is a poor choice for said items, I have lost them a lot of business over the years.

If their phony tech-head image can be undermined in the public mindset,they will die the death they deserve.

BRIAN EDGINTON wrote:

> Geez, Bill.....the guy was PRAISING Mr Cheek. Why do you feel
> compelled to jump in ?

I never said he was not. I just jumped on how he used word phrases.
Just did not fit. I jumped in because you
jumped in and he jumped in and then over there he jumped
in and oh yes, that HE jumped in also. So I was in the area
and felt like JUMPING IN. What the heck. Compulsions
are hard to figure at times, no. You just do it.

> Bill Cheek is DEFINITELY not known for his politeness.....he once
> attacked and insulted me for taking his side in a discussion.
>

here you go ... the word is not politeness. He's not being what you
expect him to be as. That is the problem. You expect
him to be as your mama told you people are as. He's not.

he attacked you...insulted even...it all depends on how you
define it and from your politeness schtick, well, do you
carry a dictionary with you a lot? I think your words used
are a bit "out of it"...do not connect.

> I admire lots of things about Bill Cheek.....but he IS a rude and
> arrogant arsehole.

Here you go again. Off into the wild-vile yonder. Making him out to
be below life-sucking vile-worms at your feet.

Rude: how? he's who he is. arrogant...gosh, If I knew
what Bill knows I may come off as arrogant too. Gee,
I've been called arrogant by many teeny's over in rec.
sport.swimming where I help people learn better swim
skills from me. Arrogant called due to some arsehole
too stupid to Listen.

> HE doesn't apologize for that and certainly doesn't
> need you to philosophize on his behalf.

I"m not on his behind-half. I just stated a series of thoughts and
came to a conclusion
all my own. Why should he apologize. I
don't for what I say. If i did nto mean it
i would say something else.

Why does he have to apologize? To you?
Why? he has his thoughts and he puts them
to your test and you fail him. but thirty others
think it's just great.

30 to 1. have you ever just tried to see?

Pretty much what he told mewhen, as a newbie, I copped a full broadside from him.

Well, sounds like you had it coming. if you cannot take criticism
get out of the fire and go cool your arse off in the
Mold's out there. Fit in. Get stuck. Ride backwards.
Go minus. Find nothing.

>eliminate them all together.

Not just the dope deals, but whatever you're doing that's illegal,
whether or not you know it's illegal or not! Police state powers have
never been limited to just the criminals. In fact, the criminals
proliferate while the "honest" citizens cower in fear of that knock on
the door, never knowing what crime-of-the-day they have committed.

AMEN!! The Internet is where five very different and basically
unrelated dedicated-purpose networks connect with each other, your ISP
is providiing an umbrella connection to five basic networks. These are
the Web, FTP, Telnet, E-Mail and Usenet. Using the web to run Usenet
and e-mail is like using a dime to tighten a screw instead of using a
screwdriver.

Amen again. I've used a couple versions of Netscape Communicator, Outlook Express, Outlook, DeJa News and I've recently landed on Free Agent and it whacks the rest by a long shot for Usenet ops. Very fast, efficient and highly intuitive. Has cut my online time significantly. My only squawk is that it does not graphically show quite all of the thread trees like Messenger does. No biggie. You do need an ISP without an agenda (AOL, MS) which provides direct newsfeeds and lotsa groups to get FA to really talk. I'm lucky in that respect with over 35,000 of 'em directly available 24/365. The curent maxed-out CD version of Agent with the book is now $40, the check is outta here shortly.

>:

Keith, I belive in the U.S., monitoring of cordless phones is illegal, no notwithsatanding clause, no "life threatening clease, just plain no. How could a conversation be life threatening, only the actions of people are life threatening.
Tell you what,..... I' ll give you the fact that there is a life threatening situation developing. Why were you listening to a phone conversation, it's illegal!

" So officer, there I was committong a federal offence......"
I can hear the silver bracelets goin around the wrists as I type.

Your kind beat at the starting block...

Just my take on it anyways.

Take care, and listen to what ever you want, just be careful to whom, and how you tell it.

Thats typical. Well ,the Radio Shack on Folsom Blvd in Sacramento, CA has discrimination issues. I went into the store to find a telescopic antenna. I asked the Salesperson to help me locate it. He was helping when when all of a sudden, someone came in to look at car stereos. He immediately went to the other customer without saying anything to me.. He just left me hanging. After 5 minutes, the guy left, and once again, I asked him for help... He says "Oh, ok". He is once again, looking around and all of a sudden, another Arab came into the store. He abandoned me again!!! I asked him to look at a catalog, and he said "$2.99".. Nothing more, just $2.99!!!! I have spent thousands of dollars at that store! Well, never again.

From: Robert <rc123@globe-net.net>
Message-ID: <37CB5C18.831AF46F@globe-net.net>
Source record: 108429

Brett,

The newer scanners are required by law to not be easily modifiable
for cellular reception. The days of the diode matrix snip-n-clip are
gone. They are now microprocessor controlled and it is very
difficult to replace or fool the processor. There are lots of older
scanners that are capable, though it is now illegal. But for hypothetical
conversation... check out this link:

http://w5gb.nmsu.edu/kc5kto/mods.html

For PC control, you can add a simple interface called PROgramit
to just about any scanner. You can control your scanner from your
computer or better yet, import a database into the software and
program all the frequencies directly into your scanner. No more
manually punching in frequencies! More info at these links:

http://www.qsl.net/ka2pyj/index.html
http://dune.globe-net.net/~rc123/Robert/PROgramit/PROgramit.html

Andy,

I have a list of the following.

Forest City Volunteer Ambulance 155.295
Forest City VFD 33.86
33.92
Forest City Borough of 153.89 Fire
155.61

Oh wait there's a Forest County too.

Do you need those or Forest City Borough?

Let me know.

2832. PCR-100 or 1000?

Newsgroup: rec.radio.scanner
Date: 1999-08-31 00:00:00 UTC
From: Brad Hoover <ahoover@prodigy.net>
Message-ID: <37CB6584.A65298ED@prodigy.net>
Source record: 108435

Hi,

I'm a shortwave listener and I was hoping to expand my monitoring by buying either the PCR-100 or PCR-1000.

What I don't understand is the PCR-1000 is listed with a range of 100 kHz - 1.3 GHz with AM, FM, WFM, SSB, CW bands. Meanwhile, the the PCR-100 has a greater coverage area 10 kHz - 1.3 GHz but is listed as having only the AM, FM, WFM bands. I thought that a band was just a division of the spectrum; so shouldn't both receive the same bands? Any help is greatly appreciated.

Brad

The obvious question to as is...have you called Tandy(1-800-843-7422, I
think)?

The part may still be available.
If not, then it's probably not worth the effort to look any further-the
LCD is probably a custom design, and a generic replacment is going to be a
major project!

> >

Nah....bill is his word.

You use the word phrase "not known for his politeness"
which is a very negative way of describing a man who is
his own man. That is the part the large percentage of the
NGers just cannot handle.

I get along with Bill and right from the start we hit it
off because we share a way of writing. we have that
same attitude and ability to paint word pictures that
piss the hell out of most who want to be pissed off
AND LOOK for someone to blame for it.

So Bill Cheek was their bane. But if you really understand
his kind of style you see that all he's doing is inventing phrases
as he goes. Same as I do. There are a few more out there
who are able to do similar.

Look for another phrase about bill. Being Polite is being
a face that has no wrinkles...ever. Bill just let it be and
spoke from where he was at that time and if you got alal
pissed off about it...that is your problem. Not his.

But so many of the losers on this NG made it his problem.
Afraid to admit that to understand bill they had to quit
bull-shitting themselves about their inability to walk along
with Bill. Some of us are able to walk along with Bill in
his mocassins.

So many of you could not and lashed out at him because
he saw you for your self. He just had no time for you. he
did not derive any satisfaction from dealing with you. You
never tickled his "fancy button" that some of us did.

It was not so much of telling YOU where he was with you
in a heart beat.

Bill just was where he was and if you could not walk along
with him he did not know you were there... you made no
impact upon his sense of "this is how it is". You were never
there with him.

Some of us just hit it off with Bill because we share similar
abilities and similar smarts and understand more than most
o of you who took him down can ever know.

Bill is who he is and does not look to any of you for his
standing with himself. he seeks not your approval. That
is as it should be. If along the way it occurs, fine. if not,
then it cannot be helped and you should just realize it and
appreciate that he is his own man and be your own.

So many of you who denigrated Bill doing so because he
did not recognize you. How could he? You never spoke
with him. Most spoke about him or at him and did not see
the answers.

Some of us hit it off with Bill. I still have some of his famous
funny's he wrote me. Hilarious. But most of you reading them
found them insulting, irreverant, maliciouis, hurtful to you and
your mama's birth with you, etc.

If you hit Bill's Funny Bone you were with him. If not, then you
were one of the crowd he saw as just that: people.

Those of us who arrested his Funny Bone got laughter in return.
Bill is a funny man. He has abilities that a lot of you cannot see
and discern. Some are able to converse with bill on a level he
appreciates.

Is not that what you do? Find people on you level who you can
appreciate or get appreciation from.

Most of you could not with Bill. So that is it. You just were not
able to share the humor. That is Bill. He's a funny funny man.
If his humor allows your mind to blink...to open wider, then you
get to know him. He gets to know you.

That is the answer. He got to know a few. A few got to know
Bill.

Don't deride the man because a lot of you were unable to really
know him. Or able to with the garbabe-mind-full you brought into
the arena he was walking in.

bill cheek is a very very funny man. But you have to listen to
hear it. some of us are able to. that is life. that's how it is.

I was at one of my local Radio Shack stores last night. I went in looking for a good handheld scanner that picked up the 225-400 MHz military aircraft band. I know that none of the handhelds in the current catolog cover it, but I was wondering if they may have had one from last year's run. They didn't which gets me to the funniest thing I have ever heard about NEW scanners. The kid I was talking to showed me a PRO-91 and said though it did not pick up the band I wanted that I could buy a crystal to get that band and the 800 MHz coverage made it worth buying. It was all I could do to contain my laughter as I immediately left the store.

I was wondering what do you all consider the best software for the AOR 8000?
Also, who sells an interface you don't have to drill or solder into place.

I have an early US unblocked AOR 8000 and I have heard there are updates
that were made to this radio later but I am not sure one what all of them
are and two if it is feasible to update my radio.

I have read about a "birdie" modification, a filter mod, an audio
modification, a short-wave enhancement mod, Bandercom sells an "M" version,
Javation sells a "DX" version

Please help

Geez, Bill.....the guy was PRAISING Mr Cheek. Why do you feel
compelled to jump in ?
Bill Cheek is DEFINITELY not known for his politeness.....he once
attacked and insulted me for taking his side in a discussion.
I admire lots of things about Bill Cheek.....but he IS a rude and
arrogant arsehole. HE doesn't apologize for that and certainly doesn't
need you to philosophize on his behalf. Pretty much what he told me
when, as a newbie, I copped a full broadside from him.
BTW, I really hope he can prevail in his current legal situation. He
contributed much to our hobby.

> division of the spectrum; so shouldn't both receive the same bands?

That is one definition of a band. But AM, FM, etc. refer to the
receive mode the radio can be put in to listen to signals. You
need to match the recieve mode of the radio to the transmit mode
of the signal to hear it properly.

So if you really are looking to expand your SW listening, then
the PCR1000 is the way to go since it has SSB. SSB is used on
amateur bands, by utility stations, and one of my favorites,
HF aeronautical freqs.

If you are just going to tinker some and are not as "serious",
get the PCR100 to save some money.

if your going to use a rechargeable battery such as a NiCad then YES you must drain them completely down atleast once a month to prevent memory from forming in the battery. Then charge it up using a slow charger like one that take 16 hours. Do not over charge the batteries it will cause them to have less life expectancy..There are also places to get batteries from that will allow you to buy the parts to them and just replace the guts of them.

http://www.mrnicd-ehyostco.com/

here is one of them.

Homicide? Try maybe felicide. Homicide is the killing of a human being, the first syllable coming from the scientific name for humans, homo sapiens. As I said before, keep listening to the jerk, and be creative, and you'll find a way to make him pay.

Yes, I know. However, if you've ever had a pet, you know there is no difference in the feeling of loss. That's something that always bothered me - that pets are treated as property, instead. You can get a few bucks recompense, or a replacement, if someone kills your pet, but you're not prosecuted for anything criminal most of the time.

HEY, what about CENTRAL Florida?

North Florida is usually thought of as the area from the Gainesville
are northward, central Florida from there to about Sarasota, and
everything south of that South Florida. This is surely my opinion and
it is not written in stone as I'm sure there is some "Geographic
Policeman" out there who just can't wait to pounce on this answer to
tell me how wrong I am.

Methinks if you did that you would end up with no modulation.

As far as I know Atlantic 252 transmit a form of vestigial sideband,
that is effectively a single sideband and the carrier, the other
sideband being subject to a fairly steep filter. Subjectively this
makes the sound 'clearer' as the radio is in effect off tune - try
letting your car radio search and see how often it settles on 254KHz.

<Sycho_Graphics@msn.com> writes

Hi,

>I was wondering what do you all consider the best software for the AOR 8000?

The AR8000 is well supported by various software packages - more than
any other receiver at the moment. The following packages all support the
AR8000 in one way or another.

Jav-Scan 8000
http://www.javiation.co.uk

AOR PC-Manager For Windows
http://www.demon.co.uk/aor

ScanStar
http://www.scanstar.com

ScanCat Gold
http://www.scancat.com

Radio Manager for Windows by Ben Saladino
http://ourworld.compuserve.com/homepages/Ben_Saladino/

ARC for Windows
AR8000
http://www.arc.mypage.org/

8K - A simple AR8000 utility
http://www.mnsinc.com/phares01/aor.html

AR8000 Channel Commander
http://www.odcombe.demon.co.uk/8kcc_readme.htm

ScannerWear by Radio Control Systems Inc
http://www.radioscan.com

RadioMax
http://www.futurescanning.com/

The following two packages were for the MAC but neither are available
anymore (as far as I'm aware).

MacScan8000
http://www.designeq.com

AR8000 Toolkit (Macintosh)
http://www.mich.com/~eddy/works/

>Also, who sells an interface you don't have to drill or solder into place.

The original AOR CU-8232 remains available although quite expensive.

There are several designs on the Web for building your own but almost
all use a means other than the Flat Flexible Cable (FFC).

We have two interfaces that use the FFC available (Just plug and play).
Other third party vendors who have produced interfaces of their own are
Scancat and EEB/EDCO in the States but I'm sure there are others also.

>I have an early US unblocked AOR 8000 and I have heard there are updates
>that were made to this radio later but I am not sure one what all of them
>are and two if it is feasible to update my radio.

For distribution in the USA AOR were forced to produce the AR8000"B".
This has the frequencies used by US Cellular blocked and cannot be
restored by RS-232 as the original AR8000 (sold in the USA) could be.

I'm not sure if the AR8000B is still in production but the AR8000
certainly is.

>I have read about a "birdie" modification, a filter mod, an audio
>modification, a short-wave enhancement mod, Bandercom sells an "M" version,

Yeah, that was one of the things I had thought of too - how to track the
helo. The system being installed here is designed for units to be able to
see the same video the helicopter see's , so I'm sure it's limited range -
it would only work if you were close.

>

>you suggest, that's how San Diego PD would do it, rather than spending all
>those unnecessary bucks (hmmm, on second thought...)

OK, so how do they do it? This is the heart of my original question.
Someone, somewhere has to know what equipment is used for this! I did a web
search yesterday for about 2 hours and came up with nothing. Are these
products so specialized that they don't advertise on the web? I find that
unusual. Certainly there is something available off the shelf that will work
(although the price is probably the gross national product of a third world
nation). But hey, if I ever hit the lottery, I can add it to my list of cool
toys to get... ;-)

Seriously, I want to know as much about this as I can. Someone has to
know....

You never know, too. The answer may be so simple it's laughable. How much
does it cost to build a 4 level FSK these days and hook it up to your PC? A
lot less than a dedicated pager monitoring station does, but it serves the
same purpose. Something to think about.

Maybe so, but how do I prove it was an accident? Imagine me and this lady in court, her sobbing and whining about my scanner and how she's afraid to use the phone for fear that I'm listening, blah, blah, blah. Then you have me sitting there trying to say, "But your honor it was an accident! See, the triple conversion circuitry bounces the desired frequency, minus the IF of the local oscillator....." All he'll hear i "See, the blah blah blah blah blah bounces the blah blah, minus the words words of the whatchamacallit..." You tell me who would win that lawsuit... No doubt the CTIA would have provided the lady's legal counsel free of charge, just to make an example out of another scanner user. It may be legal, but I damn sure don't have the time and money to prove it if I had to.

Which antennas (maybe from RS?) are good for a Pro-90 scanner to do: 49 Mhz range, 800 Mhz trunk range, and 900 mhz range??

Those are protocols, not networks; and there are a heck of a lot more
than those five. :)

No, not really. I have seen this happen when I lived in Rosamond Ca. Things
are done differently in a small town. The call was heard by a civilian
volunteer for the sheriff's department on his scanner and the authorities
were waiting for the unsuspecting robber to appear.

>(snip)

>
>Stupid? I don't know. Again you are assuming that they listened all
>the time. I didn't read anywhere in the story where they stated this.

Really? Where did I say that? ASSumption must be contagious.

It doesn't matter if they listened all the time. It's irrelevant. The point
is not that they listened. It's that they testified in court thereby
admitting their own guilt, and the court simply looked the other way. That
is a double standard no matter how you slice it.
>
>When were the people that taped Newt charged? They would also have to
>charge the Senator that released the tapes, and I haven't heard that was

I had heard that they were. If they weren't, they should have been, and
knowing the mentality of the hang-em high republicans, I'd be very surprised
if they were not.

>> Didn't you read the story? They ADMITTED hearing it on the scanner, even

>Be glad you weren't around here. 1st "no insurance" is $325, second is
>$750. As to what they said in court, well there would be no case if
>they didn't say how the information was obtained.
Bingo! Stop right there. If they had just said "I heard that they were going
to get me" and left it at that, there'd be no big deal over it.

>Perhaps they thought
>that stating the truth was the right thing to do, even if they knew the
>consequences. Lots of posters in this group say that cops lie all the
>time (including you) yet when they tell the truth (and might have to
>face the consequences) you say they are stupid. Interesting.

Interesting. I have no recollection of saying that "cops lie all the time"
as you stated. I know many honest cops and I've also known some
not-so-honest cops. Again, that is irrelevant. I still stand behind the fact
that these people had the right to refuse to answer anything self

incriminating and threw it away like yesterday's newspaper. This is why our rights are being eroded away little by little, because John Q. Public isn't in the habit of using them! Being LEO's they *should* have known not to do that! But instead they did it.

You want an assumption? Here's mine. These people weren't interested in being honest. They wanted to make their neighbor look as bad as they could no matter what the consequence. It's typical human nature. They want to be seen as good cops who listen because they care. In reality, they were just nosy neighbors looking for a way to rid themselves of someone they didn't like. And because they were cops, they got away with it. If they were bus drivers by trade, they'd be scannerless and facing fines from the FCC. Period. Maybe I am ASSuming, but I bet I'm pretty close to the mark.

And that should be the end of this tired old thread.

I just found one called Gravity. Looks like it is a good one. It can be downloaded at ftp://ftp.microplanet.com/grav212.exe but my favorite is still Outlook Express 5 as it does many things such as setting up columns anyway you like them and showing the size of messages.

RS has a great little $9.99 telescoping antenna catalog number 20-006
that's fantastic for VHF fully extended, just as good as the stock
duckie on my bc235xlt at 800/900mhz when fully collapsed - a real gem,
to say the least.

For more money, www.strongsignals.com has reviews of some unusually
good flexible and, well, miscelanious antennae. I can't claim to have
personal experience, but I ordered a Diamond antenna based on the
reviews there.

Changing the natenna is not going to decode it for you. You need the acars decoder program to decode it.

1. Actually knows where the earphone for the scanner is.

2. Has taped to his wall anything scanner-related (frequency charts, etc) that he laminated.

3. Has more than one scanner clipped to his belt at any given time.

4. Actually clips a scanner to his belt in the first place.

5. One scanner...multiple speakers throughout the house.

6. Considered location for antennas before buying a house. (Does not apply to hams who like scanners too.)

7. Has belt clip on handle of lawnmower.

8. Has ALL channels programmed in a 100 channel+ scanner...(and locks NONE of them out..."Wouldn't wanna miss nuthin'.")

9. Makes certain the power and antenna leads reach his bed.

10. 2 words: Mag Mount!

11. General physical condition: white male, 14 to 44 years of age, 5 feet 8 inches, 200 to 268 pounds, wears wide-rimmed glasses, wears horizontally-striped shirts, wears beige "Dockers" EVERYWHERE!, has pocket protector, carries extra NiCads in it, shows black socks because "Dockers" are high-water style, wears black sneakers EVERYWHERE, has bad post-nasal drip and no tissues, lives at home with parents (at 14...ok, at 44...has big "L" tattooed on forehead), has bad case of bed-head with scanner imprint reversed on cheek (facial cheek, hopefully).

12. Keeps last years "Police Call" just incase this years has a mistake.

13. Has more than one new issue of "Police Call".(One for the house, one for the car).

14. Has and proudly wears a windbreaker with a "REACT" logo on it, but has no affiliation with the organization.

15. Knows the Police, Fire and EMS 10-codes or Q-Signals for more than 3 municipalities.

16. Gets upset when the local news crew that he knows filmed him at the emergency scene pretending to talk into his scanner cuts out the portion he was in on their evening broadcast because of some damned war somewhere."Geeeez, again?")

17. Subscribes to a pager service to beep him and tell him when to turn on his scanner (that he leaves on anyway, but the pager looks really cool!)

18. Has no career (maybe a job, but no career). Keeps waiting for the local Police Department/Fire Department to hire him.

19. Hangs-out at the local Fire Station and talks the talk with the firefighters who are secretly hope something, anything would catch fire so they can gracefully exit the station without hurting "Scanner Dweebs" feelings.

20. Has no wife or girlfriend but is ok with that because he's still looking for the right woman and like his life just as it is right now.

21. Brings scanner, frequency charts, wall wart, extra batteries, belt clip and ear phones on a Caribbean cruise vacation.

22. Considers bringing on to and plans verbal interaction with a flight attendant who asks him to not use his scanner aboard an aircraft on the way to the port from where his cruise ship departs.

23. Spends nearly a half an hour thinking up and typing onto an InterNet NewsGroup 23 items that make someone a "Scanner Dweeb"

(Scanner Dweeb also owns a decent collection of dusty rarely-used and rusting excercize equipment...but I'll leave that to Paul Harvey for "The Rest of The Story".)

With my tongue planted firmly within my cheek, not wishing to upset anyone, this is

Considering MIR lasted many years beyond it predicted lifespan I have to wonder what you are talking about. Are you sure you aren't confusing MIR with the ill fated American Space Lab that burned up in the atmosphere many years ago after a very short life? Keeping MIR in orbit, maintained, and manned for all these years is quite an accomplishment. I noticed the USA didn't have any problem send American astronauts to live on MIR.

Hello,

Please Check out this link:

http://kq6mu.8m.com

It has tons of Ham Radio Resources on it!
I spent many hours gathering this info on the page.
Some of the info includes:

Satellites, HF/VHF/UHF, Yaesu FT-847-FT-50RD page,
HF Rig Reviews, Ham Radio Classified Ads, and TONS
of Ham Radio Resource Links.

Webmasters:

Please add me to your links section, I can return the favour and
add your link to my page.

Thanks & 73,

Mike Green KQ6MU

That is correct, and it has to be on STATE constitutional grounds. Also, there is the issue of Federal preemption of radio regulations, although in the Linda Tripp case and others it seems the states are allowed to have their own anti-wiretap laws.

The Federal government currently does not believe in State sovereignty. Look at the medical marijuana problem. Some states have said it's legal, but the Feds continue to prosecute those who are in compliance with state laws.

Just get a mail order degree. Kentucky Military Institute,Goffle Hill College,and Tesla University are pretty popular these days. A friend of mine got a degree from one of those,and wound up getting a slot as a design engineer at some shithole paging company in Illinois and convinced them to start a multimillion-dollar project to send multiple carriers through a Class C amplifier. What's amazing is that this cockamamie project was finally made to actually work,sort of,and he got a huge bonus out of it. Of course,it was impossible to manufacture,and nearly killed the company (they deserved killing)but he left on great terms and now fixes outboards in Wisconsin.

How's this:
A scanner dweeb is someone who usually wears keys "hanging from his belt",
has multiple antennas mounted on his car, is a fireman "wanna - Be" & shows
up at police and fire scenes with a scanner on his belt. He also usually wears
a lot of "official" looking caps or patches on his jacket & likes to be seen
speaking into a CB mike or FRS radio at a fire scene so that others think he
must be some "official".....How did I do???

2900. GPS signal reception

I don't know if this this is an appropriate place to ask thisquestion,
but I figured if anyone would understand propogation, it would someone
here. My question is this, is the recption of GPS signals affected by
the time of day and/or solar flares? I've noticed that my GPS seems to
me more reliable during the day than during the night.
The worst recpeption seems to be during the time the sun is setting and
rising.

Thanks for whatever help you can give me.

Ken

Only in that the constllation varies. Solar noise is way below the GPS
signal.
You may be seeing dew on your antenna causing the patch to detune.

Yeah, initiative . . . . . problem solving . . . . not so many durn simulations. I hear where it was recently released to the public that on the first soviet spacewalk, the cosmonaut's suit expanded so much due to the pressure differential that he was unable to get back inside the hatch without first manually causing his suit to partially deflate. THAT's initiative!

Looking for the freqs used by the International Hot Rod Association officials (starters, track crews, misc). We were at Norwalk Raceway Park last weekend and I had the Norwalk radio freqs, but NOT the IHRA ones. I am coming up empty. Note - not NHRA, but IHRA.

Thanks a bunch!

Today, September 1st, 1999; marks the beginning of fines being issued in a local Ohio town if a driver is caught using a cell phone without the hands free feature. You can of course pull over and use it. Emergencies are the exception. From March till yesterday, August 31st, 1999; only warnings were issued.

I work for remarq, so you can take all my comments with a
grain of salt- I am undoubtedly biased :-)

I can't speak too well to what Deja is trying to do with
their service but I can tell you what we are trying to do
with the Remarq service. We want to make a discussion
interface which is easy to use for everyone and is also
fast. As such, we try to optimize the interface to
minimize the "web clicks" to the end user, since each click
represents a network transfer. This means that when you
view a discussion on remarq, you'll see the entire
discussion in one shot, rather than having to click through
each article.

And yes, we thread articles based on subject line
matching. In fact, we even group "like" postings
together. For example, often posts will come in for
"Mickey's photo album part 1/5, 2/5, ..." Those will be
grouped together within one thread for quick viewing. This
also reduces the size of the list of threads that you have
to download since you don't see multiple entries for a
bunch of articles with the same subject line.

Deja keeps a good long backlog of articles. We only
archive a few months worth at Remarq. But I don't believe
that Deja carries any binary groups. Remarq carries both,
and the binaries take a heck of a lot more disk! :-)

>(Actually, I just remembered Deja will be offering
>something like that - local access to their newsfeed,
>with whatever newsreaderyou choose - but you will have

>to pay for it).

You can get this from Remarq if you'd like. Its called a
"personal usenet account". I think it costs around $12 per
month or so.

If you try remarq and have any problems just drop us a note
and let us know what we should do better.

Good luck,

Mike

I was in a Radio Shack store today buying a UHF antenna for a two way radio, and I asked the lady at the counter if November 15th was still the forecasted release date for Pro92. They had just received a memo from whoever with updated information on release dates of many new products including the Pro92. According to the list 10/15/99 is when it will be available, and I was told that the date can change. So maybe we will be seeing this new toy a month early? I sure hope so!

Hi! I have for sale a Alinco DJX10 outfit. I purchased this new from grove at the end of May, and have found that it is just too much radio for me. It is a great outfit! Everything is in BRAND NEW CONDITION, with ALL manuals and boxes. Here is what I have:

Alinco DJX10 1200 channel scanning handheld, which covers from longwave up to 2GHZ! All modes, AM, FM, NFM, WFM, CW, USB, LSB, channel scope, computer programming, Alpha Tagging and much much more! Very rugged built and a great preformer! Include in this outfit is alos 2 Ni-Cad battery packs, a AA battery case, a drop in desk charger, protective case for the radio, rubber duck antenna, telescopic deluxe antenna, Icom Programming cable ($45 new), REGISTERED software, NEW UNOPENED Alinco filtered cigarette plug, and wall wart.

This outfit was purchased in late May from Grove, and is in BRAND NEW CONDITION. I have well over $550 in this outfit, but have decieded to sell it due to the fact that I have too many radios and not enough time to use them all. I am asking $400 shipped via UPS or USPO Priority included. If any queston please email me. THanks all!

LARRY :-)

I was told to look inside and wire pin 11 at TK-10421-M2
what the heck does that mean ??

I opened it up and I couldnt find anything marked TK-10421

How do I get proper signal out to my PC to use pocsag anf flex
decoders

I got something off the web its called Accu Page - I bought the
software and the module but its shit.

It works of the earphone jack and it goes into the module
either you get 512 pocsag or 1200 pocsag but never both since the
volume adjust is so sensitive

HELP !

thanks

<zebede@earthlink.net> wrote:

>I have a 25 pin serial port available on my computer and recently acquired
>at Radio Shack Pro 64.
>
>Can someone tell me how to make the data cable for the pro-64?

This is an excerpt from an Excel program that you can use to program
the PR0-64. If you'd like a copy email me and I'll send it to you.
Here's how to make the cable.

CABLE

RS PART # DESCRIPTION
276-1428 9 Pin Female D-sub, Crimp Type Connector (RS-232 DB-9)
276-1508 Shielded D-sub Connector Hood (RS-232)
42-2387 6 Ft Shielded Audio Cable 1/8" Stereo Mini-Plugs

Look at the back of your computer and determine which serial port you
will be plugging into (com1 or com2). You may need different
connectors, depending on if you will use a 25 pin or 9 pin, or male or
female configuration. Just plan ahead and get the right parts at
Radio Shack.

You can cut the cable in half, if you need to make two cables, or just
cut off one end. Strip the ends off the red and black wires you find
w/i the cable.

DB-9 DB-25
Audio/Receive Tip/Red Wire Pin 2 Pin 3
Data/Transmit Ring/Black Wire Pin 3 Pin 2
Ground Base/Bare Wire Pin 5
Pin 7

Be sure to push the pins in all the way! Wrap electrical tape around
the cable so that when you put the hood together around it there is a
snug fit, to prevent it from pulling loose later.

http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-federal-government license in the United States (over three million records). Many of the sources listed contain a subset of this data, although some contain all or nearly all of it. Federal government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscription services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

Another listing of FCC databases has been compiled by Rich Wells at:
http://www.strongsignals.net/htm/fccfrqdb.htm

----- WEB-SEARCHABLE DATABASES -----

You can search the FCC master for free from these web sites:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

http://www.perconcorp.com/db_srch.htm

----- DOWNLOADABLE DATABASES -----

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. However, it is not being updated frequently.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See: http://www.wvsc.wvnet.edu/~fcc/index.html

----- PURCHASABLE DATA -----

BETTY BEARCAT

The Bearcat Radio Club sells FCC data in several forms. The Betty Bearcat series of regional directories covers US public service frequencies in 8 volumes. Also available is the Betty Bearcat CD-ROM that contains public service data for the entire US and a DOS-based database search program.

Betty Bearcat directories are $17 each, and the CD-ROM is $27. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), or http://www.bearcat1.com/scanners.htm.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the US Census Bureau at http://www.census.gov/cgi-bin/gazetteer/. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase used to cost $34 but is now being sold for $4 a copy while
| supplies last! In addition, the newest version, Scannerbase XE, is
| available for free download from CSP's web site. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MR. SCANNER

Mr. Scanner offers custom printouts of public service frequencies by county, or the entire FCC master for a city or town. Also available is public service data on floppy disk and a CD-ROM of all FCC data for the entire US. The floppy disks and CD-ROM come with a database search program.

County printouts are $4 each, and city printouts are $6 each. Floppies are $25 for the first state, and $10 for each additional state. The CD-ROM is $37. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), http://www.bearcat1.com/mrscan.htm (printouts), or http://www.bearcat1.com/menu09.htm (disks).

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

PRO DATA

Pro Data is a database manager program for license data. It does not come with its own data but can import data from APF, Percon, ScanWare, and UFDBF database files.

Pro Data costs $60. For more information, write to prodata1@gte.net, or visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543; call him at 630-554-3839 between 6-10 PM central time; or visit http://www.megsinet.com/~parnass.

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

A discone is a discone is a discone.

My Discone does great on all bands

I even use my discone to transmitt 2 meter and 440 ham radio on it

What type of antenna would I need with my pro34 to decode ACARS signals? When I go out on my back deck I can hear the data bursts, although I think there may be too much interferance(this is using a radio shack telescoping ant)

I have been listening to scanners for nearly 25 years. The first lesson that I learned was to keep my mouth shut about what is heard over the scanner. Because it can get a person in trouble. Trouble for breaking laws and from people that is mentioned in conversations. That is one reason our government has and continues to crack down on scanner listeners and the frequencies that new scanners can receive.

IN OTHER WORDS SOME PEOPLE NEED TO KEEP THEIR MOUTH CLOSED.....BUT THERE'S ALWAY A SMART DONKEY
IN THE CROWD.

REMEMBER OUR GOVERNMENT MIGHT TAKE OUR SCANNERS AWAY FROM US ON OF THESE DAYS. LEARN FROM WHAT TAKES PLACE IN OTHER COUNTRIES.

I am not snipping because I would not know where to
start.....you are a weird person, Mr Conduit.
I think your brain cells may be trying to tell you something.

But the "here you go again" bit....."again" ? I do not recall an
earlier post on this subject by me.
And I do not ask or expect Bill Cheek to apologize to me as I was not
hurt or offended. Sometimes usenet pisses me off but it never offends.
And who are you to know what I expect of him, anyway ?

I really know better than to post this.....but, what the heck....

Well, that is good to hear. I was wondering if they were going to keep using the pile of junk until it killed somebody. However, on the same note, we are just asking for more trouble , what with the Russians building some of the modules on the new station. I don`t know what makes our government think that they will work any more reliably than Mir did. It has gotten to the point now, where being "Politically Correct" could kill someone ! The government over there is highly unstable anyway, and one of these days, I see an argument arising about just ** Who ** the space station belongs to ! How would you like to be aboard when THAT one gets "settled" ? These are the same people who have aligned themselves with the Chinese, a government that makes Nazi Germany`s Third Reich look like nice guys..... In the last couple of years, they have fired the whole government over in Russia about three times. Now that is what I call stability ! Their army is living on dog food, and selling off some of the nuclear weapons to our enemies. For instance, there are 11 "suitcase" nuclear devices "missing" from their arsenals at the present time. Nobody can account for them. "Democracy" over there is a complete failure, because the government is so entirely corrupt that money sent to bolster Democracy promptly gets siphoned off into the pockets of the politicians. For instance, we sent them about 11 million to dismantle their old nuclear weapons, not one dime of which has been used for that purpose , and not one red cent has been accounted for. Our government justifies this by stating that "there is likely to be an accidental launch due to the deterioration of the nuclear device". Balderdash. Having worked in the industry, I can flatly state that quite the REVERSE is true. They are not likely to be ABLE to launch them if they deteriorate much further. I read, this morning, in the newspaper, that the REAL government over there is actually the RUSSIAN MAFIA.... Over there, we have a few incredibly rich mafia bosses, some of whom are government officials, that completely control the place through terror and murder. Maybe you should call up the Bank Of New York, and ask them about the "Russian money laundering scheme", and see what they have to say for themselves.....

Hi, everyone. Today I got the crazy idea to make a program that log's crap that you hear on your scanner semi-automatically logging a bunch of shit(time and date mainly). I would like to release this logger to the public however I don't know what fields I should include. So far I have:

Date, Time, Frequency, What the frequency is supposed to be, What you heard, and Comments.

Thanks in advance for your feedback,
Charlie

> the issue of states laws V. Federal laws.. (and how they are
> enforced)..

Since when can a state make adherence to federal laws optional? While the state may not bring the feds in or inform them, and hence no prosecution takes place, that does not change the illegal nature of the crime under federal law. A state judge cannot overturn a federal law except on constitutional grounds.

Not to defend Russia, but MIR was never intended to last this long.
It would be like making a standard frun of the mill automobile last for
several million miles. If you will do some digging around, you will
see just how well MIR was built and how well it lasted.
I doubt that anything we (the west and USA in particular) built at the
same time would have fared much better. MAybe even worse. The BBC
science program had a nice disccusion about the differences between the
Soviet/Russian aprroach and ours to space flight.
The Russians allow for a lot more initive, and the crew solve problems
with out the endless simulations that NASA runs.
I too felt that the Russians were being foolish in trying to stretch
MIRs life, but at least now one died. Now if they jsut keep to their
plan and ditch the craft and not attempt to revive it yet again.

Sidney J. Latham wrote in message ...
they are all around us ..... sometimes we can't see them..... wait until something happens look in my rear-view mirror and another one goes passing by....at the scene, they are only in the way

THEY MAKE HONEST SCANNER LISTENERS AND OUR HOBBY LOOK LIKE A MAJOR CRIME SCENE.....
Depends.

Do they have a camera in hand? Or are they just clogging the scene? Do they know what they are doing, and stay out of the way? Or do they "assist" the officers and direct traffic or stand in the line of fire like the Super Vigilante Man? I have been, and know many others who have been at the scene of major fires, accidents and other newsworthy events as they happen. Camera in hand, they provide video of the situation long before the sleeping media reporters get out of bed and head to the scene. They know their limits, where they should and should not go and what to say/do and what not to say/do. Their (and my) main concern is not to be a hindrance, but rather an observer and recorder of events.

I've seen plenty of the other kind of ambulance chasers too. The ones who think they are as good or better than the police and fire department that responds. The ones with their scanner on, pretending to be cops/firemen/whatever. The ones that think crime scene tape doesn't apply to them. I have no love for them either. But we are not all the same.....

As for what a scanner dweeb is, well I think anyone who had ever watched a pursuit on TV with the scanner on and the TV muted qualifies. (Myself included). A spouse or family member who participates with you in this activity is also guilty - by association....

One of the few, the proud, the Scanner Dweebs. ;-)

No. No, no, no. More stupid ridiculous laws and freedoms lost for the "common good" What a bunch of ignorant political bull.

The oh so wise government of the United States has outlawed looking into open windows instead of requiring those who do not want their windows looked in to put up curtains. Think about it. It's the truth. And now this, writing a law punishing the uncoordinated morons who can't talk and drive (or walk and chew gum) at the same time. And all the people say "hooray, hooray" encouraging the other states to follow suit. You ignorant fools....

Just wait, soon you won't be able to drive your car with the radio on, because the same idiots who caused wrecks while talking on cell phones will now try tuning and driving at the same time. Or cars will be required to drive for you, at the government approved speed limits. Big brother loves you and doesn't want you to get hurt or killed! (After all, dead men tell no tales - and pay no taxes...)

What will the next 5 years bring? More unenforceable and stupid laws like this written to cater to the general public's ever lowering average I.Q., that's what. Cars that drive themselves and pull over at a police officer's whim for any or no reason at all. Gun ownership limited to military and law enforcement. Nightly curfews. A national ban on profanity and cigarettes and beer and salt and anything else that is bad for you. Remember the movie Demolition Man? It seemed so funny and outlandish then. But today the "utopia" of San Angeles is almost normal looking, isn't it. I can actually picture Dr. Kokto's dream city becoming a reality.

Yeah right you say. Never happen you say. Don't be so sure. When it happens I probably won't even have the legal right to say I told you so.

Sad....

Oh for fvcks sake - do we really have to go through this again? You have crossposted your pathetic whining to six separate, unrelated, geographically irrelevant newsgroups. Your bitched to a pile of scanner newsgroups all over the world and not a single post to a mobile phone group.

My heart really does bleed for you. So you have to use a handsfree kit in Ohio or get a fine. OH MY GOD! That's terrible! Let's all wear black armbands for the next week. Certain US states are finally coming into line with many other places in the world that have banned the stupid practice of driving whilst dialling/holding a mobile phone.

What next? They might start tightening up on gun control. NOOOOO! We can't have that, can we now? <insert normal dribble - amendment blah blah blah....freedom of blah blah....the constitution....civil liberty blab blah.....conspiracy theories etc etc>

Now piss off, idiot.

DJ!

Radio shack as come up with a couple new gimmicks to add to their bag of tricks. Beware of their toll free order line and their web site http://www.preview.radioshack.com . On the web page in the scanner area they list a Uniden BC895xlt for $233.88, only you have to order it by calling 1-800-THE-SHACK, not available in stores or through the web site. The web site states that the product is available, however when you call to order they will tell you that they are out of stock, they can't backorder them, they can't issue rain checks, and they aren't sure when they will have more in stock. The $233.88 price is a sale price and they can't be certain if they will have the scanners in stock before the sale ends.

I have a Garmin GPS II that had a factory repair last summer (1998)(LCD malfunction). Softeare was upgraded by Garmin to version 2.07. I didn't miss a beat. The GPS worked right through the rollover.

Garmin advised for my model that versions with software versions below 2.04 would have the long re-cycle and that it could last for up to a month.

You don't need a better antenna. You need to keep the squelch all the way open (you will hear the hissing sound all the time.) Make sure you are using AM instead of FM. That is all you really need to do. Then just hook up to PC and decode! Good Luck!

If you are using the WACARS program (http://www.mike.mcmail.com/acars.html) then you might have to play with the volume controls on the radio to get it to work. I find that I need to turn my radio volume up fairly high (I then turn down my sound card volume ... it has to go thru the sound card to work....). Try to get the signal strength in the green and the cpu usage next to nothing....

Boeing in Puget Sound uses a very unique SmartZone 800 MHz system. Each of the major plants has an IR. or 6809 site that has been partitioned for type 1 and 2. There is also a simulcast subsystem to allow roaming. I thought at one time they were going to consolidate all of their dispatching at Seattle. This would have included Philly at the time also. Fire/Security are all Boeing employees.

Hope this helps.... These are the frequencies used by the Blue Angels but they
only use a few of them at any show and it usually changes with each location.
They use one frequency for the diamond formation and another one for the solo
pilots. Just plug all of these in and scan through until you find the frequencies they're
using and then lock out the others.

>73, Cecil, W6RCA http://www.bigfoot.com/~w6rca

The "record" for a Garmin 45 whose owner posted on the GPS newsgroup,
was for a 15 1/2 hour search for satellites, when the owner did NOT put it on
"autolocate" and simply let it seek satellites "normally" using the Almanac, which it
was interpreting as 1980 data. It "eventually" came up and behaved as normal from
then on. Options for owners of "some" Garmin units included: a) hard-reset [losing all
stored landmarks], b) set on autolocate [as you did], b) download a temporary software
fix to be deleted after the rollover AND a fresh almanac had been downloaded,
c) WAIT for hours in some cases until the unit corrected itself, d) or leave it on when
the clock clicked over and for another half hour, in which case it would automatically
update its almanac without losing its fix and getting confused.

Of the above, only c) with the possibility of a 15 hour search was likely to
happen with a user who did not know that there was a potential problem. There
were some Garmin users who gave up after a few hours, and queried the GPS newsgroup
under the opinion that their GPS had been rendered useless, only to be reassured that
their units could easily be revived.

"I would predict that there are far greater mistakes waiting
to be made by someone with your obvious talent for it."

Actually, the above is not even a change - law enforcement has
always had access to information about which cell calls are placed
in (and more) with a warrant. For a prime example, read the book
"Takedown."

I would like to sell an Icom R8500 receiver that is about (2) years old and has been used very little in VERY NICE CONDITION.I have everything that came with the radio when it was new except the original box. This is a FULL COVERAGE RECEIVER (NO GAPS). Best offer over $1200.00. Email me if you have any questions.
Thanks for looking

While traveling take a look at the other drivers using cell phones. They try to punch in phone numbers and drive at the same time.
some of those same people have caused major accidents leading to extreme injuries and even death.

So cracking down on the drivers trying to use hand held cell phones should have taken place along time ago. About the same time the EPCA law took place.

In 1988, I had a cellular phone in my car and it was voice activated. So the technology for the voice activation of a cell phone is nothing new.

People today must have a hand held cell phone in their hand......it is just a symbol of status.....the same applied to pagers several years ago. At work a few people have 2 cell phones clipped to their belt and a few pagers....if you look closer, you might see a 2 way radio also......

What will the next 5 years bring.....

I have a mint BC9000xlt 500 channel scanner and Sony 7600G shortwave receiver to trade for an HF transceiver, maybe a TS140S or ? Must be general coverage. Must have mic, manual, etc. Would also consider trading for a Drake R8 or 2 meter rig in excellent cond. and PS. What have you got? Must be in excellent cond. Must be close to an even trade.

Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment,alt.radio.scanner

I've become interested in the trunk tracking capabilities of the BC895XLT but I am wondering if it includes a toneboard. If not, can on be added? Also, can it be modified to pick up cellular? I know the UBC9000XLT can take a toneboard, is cellular ready and does wide FM too but dealing with trunked radio without a tracker is a real bugger.

I continue to dream of the all-in-one scanner that I can afford without selling a kidney.

The BC895XLT already contains a tone-board. To my knowledge it can not be modified for cellular reception.

Source record: 108259

Hello fellow scanner users

I have just purchased (third, fourth or possibly fifth-hand!) a Robyn Model 216 VHF scanner.
As a relative scanner newbie, I was hoping that someone might have any tech info on this radio. I'm fully aware that it is totally obsolete, but to get it operational would be quite fun, I thought (I reckon there's something wrong with the AF amp right now, nothing a few hours with a scope shouldn't fix)
It has two VHF bands (Hi & lo, can't remember the freqs offhand), which are set using a bank of Xtal switches on the PCB. There are then 16 more switches on the front panel, to select the channels you want to scan.

So, basically, I'm just interested in this archaic piece of kit, and would like to communicate with anyone who's ever used it.

Cheers
Tris

"SubFunction" <subfunction@snet.net> wrote:
> ... what fields I should include.

To the previous posts, add confirmation data. I have a field with a flag that indicates how sure I am of the identification (over-the-air ID, probable, possible, and WAG). Additionally, the mobile freq. and call sign fields have flags to indicate if these were confirmed by listening or extracted from a published reference.
A service code (A=Aero, F=Fire, etc) simplifies searches of the file and extracts (i.e. all private security firms). A channel field has the channel number for freqs. programmed into the radio. A 'signal' field has a subjective rating of the strength/listenability of the signal. An 'activity' field gives an idea of how busy the freq. is, ranging from a single reception to continuous (the local police zone channel goes quiet only when the dispatcher inhales). Above all, don't cast it in stone. I've been keeping various logs for 30+ years and I'm still making changes to the format.

"Traffic" in ham radio are messages delivered back and forth, basically. Hams provide a free messaging service. They also handle emergency communications. For example, in the aftermath of the Turkey earthquake, many people all over the world are probably wanting to know the status (health and welfare) of thier loved ones there, and vice-versa. Hams can handle such type messages back and forth between here and Turkey. What you were listening to on the 2-meter net is one of the many, many nets that are run to handle origination and destination of messages.

I do use remarq sometimes, and I do appreciate that it loads a little
faster. If you are taking suggestions, here are some that would like to
see implemented in Remarq.

(1) I actually prefer to see posts in plain monospaced font. Both you
and Deja are trying to make it "easier" by formatting quoted text with a
different color or style, and it doesn't always work. I don't mind
seeing the little ">" thingys before each line of quoted text. Perhaps
you could make that an option, at least from the MyRemarq page?

Also, I've noticed that it seems that remarq will not show text written
between those sideways carat figures <> Here is a test:
<can you see this from Remarq?>

(2) I actually prefer not have all posts with the same subject line
grouped together unless they are in the same thread. Sometimes, posts
with rather generic lines like "request" or "help" get grouped together
without belonging together.

(3) Could you show all the newsgroups that something is posted to when
it is cross-posted? Also, how about an option to view the entire header
(useful when you think someone is spoofing or forging a post). This goes
for Deja, too - an option that is not available there unless you select
"view original usenet format."

(4) A .sig file option would be nice in MyRemarq.

(5) Also, killfile option would be nice from Remarq - and Deja.

Nick

Bubba's rule of thumb -- all antennas work, some just work better than
others.
Couple of things to remember:
You want to mount it VERTICALLY -- i.e. ends up/down top/bottom and not
like a 'T'.
You want to mount it as high as you can.
You want to convert the input impeadance from 300ohms to 75 (common tv
thingies take flat twin line and turn it into co-ax and do th 300/75 xfmr)
and then use RG6 or some other good quality coax from the antenna xfmr to
your radio.

Even though it is cut for 88-108MHz -- it should work fine on the higher
bands as well. At any rate, it will work better than a rubbie ducky in
almost all cases.

cheers

Cellular reception on the BC895XLT has been written about using Virtual Downconversion. It employs enabling the 800MHZ filters on, while searching through 360-380 MHZ. The 895 also must be in NFM mode while doing this instead of the default AM, so one must find the lines which control the modes and swap them out. It CAN be done, yet one needs a service manual to attack it. Steve Donnell, the creator of VDC wrote about it, so I'm a believer.

I'm in Cleveland, of which the city in question is a suburb. On a local radio talk show, a caller spoke of how cell phones were hazardous to use while driving and how he had experienced several close calls while driving while using his cell phone. He then went on to say he was glad they passed the law because, get this, he said "I know it's dangerous, but I use it anyway, so I want them to pass a law to make me stop, because I can't stop myself." This is the mentality that will eventually have the USA looking like the Soviet Union.

>

Well i moved my wave volume from half to full then 3/4, and moved my line-in and microphone from i think half and near full to 3/4. Playing a wav file does the line-in or microphone matter?

The fact that all 3 of these volumes didn't really move far to get to 3/4 made me sceptical. As before i tried Threshold 3 Bottom Threshold 1- i still got the same. I then tried Threshold 4 then 2, then with BottomTheshold 1 and Theshold 4,3, and 2.

26/08/99 00:55:38 Duration : 0 Min 2 Sec Tones : 12345
26/08/99 00:55:56 Duration : 0 Min 6 Sec Tones : 12345890#5*
26/08/99 00:56:19 Duration : 0 Min 6 Sec Tones : 12345890#5*
26/08/99 00:56:53 Duration : 0 Min 6 Sec Tones : 12345890#5*
26/08/99 00:58:08 Duration : 0 Min 7 Sec Tones : 12345890#5*
26/08/99 00:59:00 Duration : 0 Min 7 Sec Tones : 12345890#5*
26/08/99 00:59:59 Duration : 0 Min 7 Sec Tones : 23890#5*

This above one is theshold 4. With the 12345 tones sample it would be truncated as just 23 - 23 is what it was in my previous log, before i altered the volumes. If you compare it and these others to my previous quoted log like this, you'll notice nothing has changed since altering the volumes.

26/08/99 01:00:17 Duration : 0 Min 8 Sec Tones : 18223456789039#5*7
26/08/99 01:00:36 Duration : 0 Min 7 Sec Tones : 23890#5*
26/08/99 01:00:46 Duration : 0 Min 7 Sec Tones : 2345890#5*
26/08/99 01:00:58 Duration : 0 Min 7 Sec Tones : 18223456789039#5*

I've noticed how the tip recommends 8 for threshold and 3 for bottom threshold (i presume this means from an unamplified source like a wave file) yet the best i've got from playing your sample wav file is 3 for threshold and 1 for bottom threshold. I have an AWE64value is it too loud?

I thought i'd try lowering the master volume and wav volume really low but it still came out the same.

3033. IL State Police EDACS System

Newsgroup: rec.radio.scanner
Date: 1999-09-02 00:00:00 UTC
From: n9jig@theramp.net
Message-ID: <n9jig-0209991337400001@56-ip-238.theramp.net>

I have identified several previously unidentified talk groups on the Illinois State Police EDACS System in Chicago. I now have 123 groups as active on the system.

I am working on identifying which groups are native only to the North or South systems and which are on both. Most of the Dispatch and Car groups are on both.

Check http://www.theramp.net/n9jig/radio/radio.html for details.

Correct. Typo. That should have read 1995! Incidentally, there is a difference between "available to the consumer" and "available." The "start date" on the GPS clock, which just rolled over, was 1980. I suspect that the military had some up and running in the 1980s.

>several million miles. If you will do some digging around, you will
>see just how well MIR was built and how well it lasted.

Exactly. The Russians should be VERY proud of Mir. They've done one HELL of a job with her. A 5 year station that's lasted 13 years is a testament to Russia.

Another thing, the Russians have a LOT more balls than we do. They don't end a mission at the littlest problem. They try to SOLVE the problem and stick with it. We tend to be chicken shit and call it quits. We need to grow bigger balls. Manned spaceflight is a dangerous

business, either play it full bore or get out. If we had a fire on Skylab like they had on Mir we would have bailed out so quick your head would spin.

>I doubt that anything we (the west and USA in particular) built at the
>same time would have fared much better. MAybe even worse. The BBC
>science program had a nice disccusion about the differences between the
>Soviet/Russian aprroach and ours to space flight.
>The Russians allow for a lot more initive, and the crew solve problems
>with out the endless simulations that NASA runs.

Simulations are fine but won't cover everything. That's where balls comes in and hard thinking and doing. The Russians are VERY good at it. Nasa should really learn something from them.

>I too felt that the Russians were being foolish in trying to stretch
>MIRs life, but at least now one died. Now if they jsut keep to their
>plan and ditch the craft and not attempt to revive it yet again.

Agreed. Mir did a FANTASTIC job but it's time to let her go with DIGNITY. She's worked 8 years of overtime, it's time for her retirement.

Hi Cecil,
Units prior to 1993 had some problems, mostly fixed with software
patches. My Garmin 12XL had no problems.

73,
Tom

Source record: 108290

For Everyone's Info:
The BP-180 Nicad battery for the BC245 XLT is on backorder until
"middle of October" according to Uniden Parts Dept.
I ordered a new replacement battery under the warranty on August 18
because the battery that came with the unit is defective. (Only hold a
charge for 3 - 4 hours).
According to Uniden the BC245 XLT will only use that one nicad and no
other Uniden batteries can be substituted.

Hi, again. Rescently I was scanning the frequencies 144-148(2 meter HAM I think) and on a repeater I heard somehting about TrafficNet at 9. So at 9:00 PM I scanned through the frequencies and found what I was looking for at 146.730 Mhz. I listened in for a while(listening right now) and can't seem to figure out what it's for. BTW, this is the TrafficNet for SouthEastern CT. Does anyone know what this is or what it's used for?

There is a "traffic net" here in western mass broadcast from the Mt. Tom repeater as well. 146.9400. It is, and I quote, "this net provides a call up of all radio operators to check into the net with their call sign, location, and means of communication. For preparedness in emergency situations and to handle messages between cities and towns." I would imagine yours is quite the same.

Almost all still work. As expected, the exceptions tended to be pre-1975 units, which had already been replaced with newer models by their owners. Several models later than 1975 made by Garmin had temporary glitches lasting some hours, but are O.K. again now. The major casualty was THOUSANDS of GPSes built into cars in Japan, where they don't name the streets as a rule, and which are receiving upgraded software from the manufacturer URGENTLY. In Japan a car GPS is less of a luxury item than it is over here. [The GPS manufacturer started the software upgrades before the critical time, but was a long way short of completion when it mattered.]

Has anyone experienced audio dropouts using computer controlled software (Trunker etc) with the Opto 456 Lite board installed? I'm wondering if there has been a common problem with this and any solutions one may have for it.

Thanks in advance.

no I run it under windows 95b.

eavsdropper wrote in message ...
>are you running it under win98 because its crap anyway and does not work well at all under 98

Have you tried it under 95?

When you mean it doesn't work well, do you mean the kind of problem i've experienced where it makes errors at decoding [even without using an external source ie playing the sample.wav that came with the program]?

It baffles me why it should have a problem decoding internally with its own sample.wav.

actually it is different... another federal law has changed the requirements of cell location technology to allow location of the phone within 100 meters.

This is the cost that the cell guys are protesting as it requires new equipment at the tower sites.

About 11:00PM EST last night I heard NYC accent calling and co-ordinating Marine(water) units for someone off Queens bridge. Tonite about 10:45PM I heard an ambulance escort requeated for Newark Airport, a trash fire near the interchange at Franklin, and a "Heart at Ingram"

I'm in PA near Harrisburg, guess I'm getting skip, bounce or whatever freak of atmosperic conditions.

Can anybody help me identify what I'm hearing from where????

THANK-YOU!

418.0500 Ground support

The old Alpha and Bravo VHF channels are probably totally out of use. It would be AM mode if present. All UHF stuff here is AM Mode. Ground crews love their new radios and use them quite a bit, about 1/2 scrambled last year. Some use at remote sights. There should be at least 3 other freqs active on the ground crews radios, so keep searching. Also check show / platform control, tower freqs and other area air traffic. I'd start searching the 225-400 Mhz military band a day or so before the show as the Angels will be up spotting the show, giving media rides, etc. Please post Blue Angels Airshow Freq Info what you find active the show.

If you don't find them on any of these start searching. Let us know what they are using this year! Happy Scanning!

Thanks to airshow/scanner fanactics all over the world!
Please send corrections and updates to:

3075. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1999-09-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7qnj1bdpc1@news.hawaii.edu>
Source record: 108190
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

3084. Here: Scanners that can be (cell) modified

Newsgroup: rec.radio.scanner
Date: 1999-09-03 00:00:00 UTC
From: scanshack@aol.communicate
Message-ID: <19990903084956.25389.00003388@ng-fz1.aol.com>
Source record: 108199

Scanners that can be modified

Here is a list of the pre-ban scanners of which I am

aware that should be capable of frequency restoration:

PRO-2004 BC-855XLT *3 Regency 4030

PRO-2005 BC-200XLT Regency 1600

PRO-2006 BC-205XLT Icom IC-R10 *7

PRO-2022 BC-760XLT *4

PRO-2026 *8 BC-700A *3

PRO-2027 BC-890XLT *4

PRO-2030 BC-950XLT

PRO-2032 BC-2500XLT *3

PRO-34

PRO-37

PRO-39

PRO-43 *1

PRO-46 *2 *5

PRO-51 *6

PRO-23 *6

Note 1: Date code of 2A4 (Feb94) and prior, any xA3, any xA2 (label in battery compartment), or no "A" in the serial no. (Date code 3A4 (Mar94) and after WILL NOT WORK !)

Note 2: Date code of 2A4 (Feb94) and prior, any xA3, any xA2 (label on back).

Note 3: Date of mfg code must not end in the letters "ID" or after. (ID=94), except for OAID (Jan94). (On BC700A some "OBID" (Feb94) work)

Note 4: Date of mfg code must not end in the letters "ID" or after. (ID=94)

Note 5: Units with date code of 5A4 (May94) can tune the restored frequencies in 30 kHz Steps using a keyboard entry sequence after a wire on the "newly attached" daughter board is snipped.

Note 6: Units with date code of 6A4 (Jun94) and prior (and some 7A4) can tune the restored frequencies in 30 kHz Steps using a keyboard entry sequence. After date code 7A4 (Jul94) no mod can be done.

Note 7: The current 1998 models are. New reports say Icom is now only importing non-modifiable versions.

Note 8: Model (catalog) number with "B" at the end not modifiable. (Reported no L201 jumper on the circuit board)

The below list are those scanners that were capable of receiving the full 800 MHz band,

without modification:

J.I.L. SX-400 AOR-950 Icom R-7100 *

Regency MX-4000 AOR-1000 Icom R-1*

Regency MX-5000 AOR-1500 Icom R-100

Kenwood RZ-1 AOR-2500 Icom R-9000

Uniden BC-800XLT AOR-3000 * Icom R-7000

Yaesu FRG-9600 AOR-8000 *

* pre-1994

Source record: 108201

Decoding Those Radio Shack Date Codes

Decoding the date code on your Radio Shack scanner is as follows.

The date code consists of a number (from 1 to 12), followed by the letter "A", followed by another number (from 0-9).

The first number represents the month of manufacture, while the last number represents the year. (The "A" acts as a separator.)
For example, the date code

3A4 would decode to March 1974 or March 1984 or March 1994

Note that the decade can't be precisely determined but a quick check in a Radio Shack Catalog will help you to determine a decade.

Decoding Those Uniden Date Codes

Decoding the date code on your Uniden Bearcat scanner is as follows.

The date code consists of a two digit code representing the month followed by another two digit code representing the year.
For example, the date code

0AID would decode to Jan 1994 0A = Jan (A=1, first month of year) ID =94 (I=9, D=4)

0EIC would decode to May 1993 0E = May (E=5, fifth month of year) IC = 93 (I=9, C=3)

A=1, B=2, C=3, D=4, E=5, F=6, ETC......

Oh, a topic close to my heart...

I had the privilege of being one of the first police air observers to fly in 'Mike 1' when it was employed on a trial basis in December 1988 and January 1989. This trial was known as 'Operation Sky Blue' and was mounted as a joint operation by Merseyside Police, Greater Manchester Police and Cheshire Constabulary. It was an effort to try and combat the then prevalent extended car chases instigated by travelling criminals who deliberately 'baited' police officers by ensuring that police officers spotted them, and chased them.

The call-sign 'Mike 1' became relatively famous in the media at the time, with coverage in several of the Sunday supplements. I think the media thought it sounded glamorous or cache, but it was more pragmatic than that. As I say, it was a three-force operation with numerous patrol cars from each force taking part. All the patrols from Cheshire had 'Charlie' call-signs (C1 to C8, I think); all the GMP patrols had 'Golf' call-signs and, or course, all the Merseyside patrols had 'Mike' call-signs. The helicopter, being the focus of the whole operation was thus 'Mike 1'.

The trial proved successful and police use of air support has increased far beyond what those of us involved at the time ever thought possible. Here in the north west Merseyside still have the original Twin Squirrel (G-BOOV), GMP began air support operations in their own right very shortly after 'Sky Blue' and Cheshire, after at first working as a joint unit with Merseyside, eventually decided to go their own way and bought a Britten-Norman Islander aircraft, (G-CHES), to form a fixed wing ASU.

Sorry if I've gone on a bit...

--
Cheers,

Robin.

That's debatable. You contradict yourself several times.

> I like the above law.
> People can't drive and talk at the same time.
> Cheers to the government.

Oh yes, worship the nannystate. Save us from ourselves. It's like the
radio talk show caller I mentioned, who KNEW it was dangerous, but
claimed he couldn't control himself and so wanted the government to
control him. As for the proven increased chance of accidents when
talking on a cell phone, it's interesting that the same increase occurs
for those smoking behind the wheel.
Why don't we ban that, too?

> Do you have any proof of the lower I.Q averages or are you talking out
> your ass?

Actually, they have been declining for the past forty years. See
Charles Murray's book "The Bell Curve."

> > Gun ownership limited to military and law
> >enforcement. Nightly curfews.
>
> The above is the utopian dream of everybody you elect to office.
> Whether it be Republican or Democrat.

Well, then you must support it as well, since you clearly support the
invasive socialist nannystate when it comes to cell phones.

> You can't mess with the freedom of speech.
> Profanity is here to stay!

Oh, no? Do you have any idea how many people have been prosecuted for
political statements in the last few years? Like the people in CA who
distributed flyers opposing a HUD project in their neighborhood who were
prosecuted for housing discrimination. Or how about the pending hate
crime bill that would under certain circumstances, allow civil suits for
"hate speech" including condemning homosexuality from a church pulpit?

> You have the right to say any kind of profanity you want and to have
> any perverted sex that your mind can imagine.
> What else do you want?

That's only the opiate of the people liberals are providing to blind them to the other freedoms disappearing. A gilded cage, if you will. Those 'freedoms' will only last until the others are all gone. Once they have the people where they want them, such privileges will also disappear.

> If you want anything else,

Like to use your cell phone?

> you will be subject to be shot or thrown
> into a prison camp.
> Y2K and martial law is fast coming upon us.
> You WILL OBEY or will be shot or Starved to death.
> Unless, you have food reserves.

So which way do you want it?

> blab blah.....

So, the Bill of Rights, freedom, civil liberties, and the constitution are all part and parcel of "the normal dribble" eh? That's right, anyone concerned about freedom is an idiot. Why can't all these libertarian types just shut up and be happy that the government is taking care of them and keeping us safe and warm, and relieving us from all those difficult ethical and other decisions in life. If they'd just stop all this dumb, overly complicated, hard to understand complaining about stuff nobody really cares about, then the government in its infinitely greater wisdom could eliminate poverty and hate and crime and intolerance and weird ideas and bad hair days, and everybody could concentrate on the important things in life, like collecting Beanie Babies.

Those who would trade liberty for security deserve neither, and end up with neither.

The price of freedom is eternal vigilance.

Date: 1999-09-03 00:00:00 UTC
From: kleptein@hotmail.com
Message-ID: <37d0030a.5045745@news.fast.net>
Source record: 108218
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I recently started picking up this signal on the receive input to a HAM repeater. We are co-located at a site with about 70 other transmitters and have no idea where to start looking. Can anyone identify what this format is and where it might be coming from? Thanks in advance!

3104. Re: ARC8200 software for AR8200

It's OK, but a bit limited as far as memory management is concerned.
What I want is a program that will copy all of the memories from my
8200 into a database and then once I have amended, labelled etc. them,
copy them back to the 8200.
I don't want to have to do it one bank at a time.

<topaz@megsinet.net> writes

>I just bought the AOR8200; and would like to find the 800MHz receive mod.
>Could anyone help???

The AR8200 has continuous coverage but if you have the AR8200B
(distributed only in the USA) then there is no way to restore the
frequencies used by Cellular in the USA.

Hey, Guglielmo,

Binary files are a no-no in non-binary newsgroups. My server hung up for two minutes just marking the thing read. Multiply that by a few hundred thousand
and you've wasted a couple of lifetimes. Better you should have parked the file on a page somewhere and included a link here.

Good luck figuring it out.

>>this written to cater to the general public's ever lowering average I.Q.,
>
>Do you have any proof of the lower I.Q averages or are you talking out
>your ass?

There are numerous studies that support that fact. Our children are graduating high school with a 6th grade education. Our public school system produces the highest number of dropouts in the "free" world - that's kids so dense they can't keep up with the ones graduating at the 6th grade level. Do the math, if you can...

>> Gun ownership limited to military and law
>>enforcement. Nightly curfews.
>
>The above is the utopian dream of everybody you elect to office.

>Whether it be Republican or Democrat.

Well it's not mine. And yes it seems outrageous now, but just wait. You'll be telling your grandkids how easily you used to be able to travel from state to state - no travel papers, no checkpoints, etc.
>
>
>>A national ban on profanity and cigarettes
>
>You can't mess with the freedom of speech.
>Profanity is here to stay!

In the 1800's you couldn't mess with the right to bear arms either. Walk thru your neighborhood with a gun on your hip and see how far you get with the 2nd amendment today. It's only a matter of time, and as long as people like you look the other way, it will only get worse.
>>
>>Yeah right you say. Never happen you say. Don't be so sure. When it happens
>>I probably won't even have the legal right to say I told you so.
>>
>You have the right to say any kind of profanity you want and to have
>any perverted sex that your mind can imagine.

Oh really? Doing such things is already against the law in every state in the union. Walk up to a cop and cuss him up one side and down the other and see what he says and does about it (hope you have the rest of the day free when you do it, and bail money too.) Where have you been - a cave?

>What else do you want?

I want people to take responsibility for their own damned actions instead of blaming the government for not having a law preventing them from being stupid! How's that? Apparently that's too much to ask for (or even explain to some people).

>
>If you want anything else, you will be subject to be shot or thrown
>into a prison camp.
>Y2K and martial law is fast coming upon us.
>You WILL OBEY or will be shot or Starved to death.
>Unless, you have food reserves.

This is just stupid. What the hell is that supposed to mean and where is the relevance to this conversation? Do you jut like hearing yourself talk or do you actually believe this? If the latter is true, then I rest my case. There is no hope for you.

>I had a friend do the tap on my Pro 2026 and build me a slicer. But nothing
>seems to work. Is there any way to test the tap and the slicer to see if
>they are working? Someone please help.
>
I tapped a 2026 at a spot on the board, rather than the chip. The tap isn't working 100% but trunker can read a signal off of it. I need to put a capacitor inline. My 895 does a much better job - nearly 99% accuracy as compared to 30% accuracy on the 2026.

The way I tested it was to plug the disc. tap into my PC soundcard and then see if I could hear it come thru the speakers (you might have to play with your audio settings in Control Panel to make it work) If you hear received transmissions, followed by static in between, then you have successfully tapped the discriminator.

I noticed that the 2026's audio get's attenuated by at least 50% when the tap is connected. Have you noticed this also? This may account for the problem. Trunker can get a signal from my 2026 but can't use it very well.

To test your slicer Andy Porrett wrote a nice little utility for that. Check the bottom of this page to get it: http://www.lcblanton.com/dfw/download.htm

Hello Everyone,

I have the following for sale. All items are in very good condition or better unless otherwise indicated. I would like to sell the indicated packages as packages unless I get a great offer otherwise. Below prices include CONUS UPS shipping. Payment by US Postal Money Order ONLY, and prepaid. NO C.O.D.'s, etc.

ICOM HF Mobile Package - IC-706 HF/6M/2M mobile with Icom AT-160 automatic antenna tuner, OPC-599 acc cable, Comet CF-530 HF/VHF duplexer and all related standard accessories, manuals and boxes.....$ 950.00

ICOM IC-03AT 220 Mhz. HT package - IC-03AT with BC-35 desktop charger, brand new BP-7S battery, BP-8S battery, IC-DC1 Mobile Adapter, Icom speaker mic, manuals, standard accessories and boxes.....$ 325.00

STANDARD C228A 2M/220 HT with CNB-153 battery pack, rubber ducky antenna and plug in charger ONLY.....$ 300.00

BEARCAT BC-3000XLT handheld scanner, 25mhz.- 1.3 ghz. (less cellular but will receive "images), rubber ducky, ac adapter and charger, battery pack just rebuilt. Includes copy of instruction manual.....$ 225.00

RADIO SHACK PRO-62 handheld scanner, 30mhz.- 960 mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used.....$ 150.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition.....$ 250.00

KENWOOD MC-60A amplified microphone. In box, excellent condition, no manual.....$ 100.00

The Kenwood TSU-7's have been sold.

KENWOOD UT-28S 10M unit for TM-641/741/642/742 mobiles. Brand new in box, never used.....$ 260.00

(2) KENWOOD MC-44 microphones, 8 pin din plug, brand new in boxes, never used.....$ 25.00 each

KENWOOD MC-52DM microphone, 8 pin din, back-lit ttp, brand new in original wrapper, never used.....$ 30.00

DIAMOND MX-214 Duplexer (2M/220).....$ 45.00

MOTOROLA Montana 33.6 PCMCIA Cellular 33.6 Modem/Fax with cable for connection to Motorola Cellular Phone.....$ 25.00

Unknown brand HF SWR/Wattmeter, German mfg.?, says it handles 1KW but I wouldn't try it. Probably handles 300 watts, in box.....$ 25.00

(4) JOBCOM UHF handheld portables, 2 channel, 2W, 1 channel installed, 3 on same frequency, 1 on different frequency. Easily re-crystalled. With rubber duckies and plug in chargers.....$ 200.00 for set

MAXON VHF-hi , model CP-0510 handheld portable, 4 channel - 1 installed, with drop in charger.....$ 50.00

TERMS: PREPAID only by US Postal Money Order. Prices include CONUS UPS ground shipping.

3121. T Bird Frequencies?

it still is unreliable even playing the sample.wave then? have you compared it
to an external source?

I have actually had better success with playing tones that had been recorded on
tape even though you tend to get distortion with the first tone as the recorder
is slow to reduce its automatic recording levels after its only been hearing the
relatively quiet dial tone.

An external source for me (ie tape, i don't have a radio scanner) is better but
its still not good enough to be reliable. About a quarter of the time there are
mistakes. I've tried various volumes playing the tape on the recorder [even at
full volume i still get best results with threshold and bottom threshold about 1
or 2] and altering the graphic equalizer so only the mid range comes through.
I've set the line-in to 3/4 and full.

>
>i have given up with it personally my ar5000 decodes the dtmf lovely every time

> Totally agree.

I don't. As a scanner listener you should know that our police officers have better, more important things to do than harass people who are driving safely while talking on the phone. If the law could only be used to cite a driver in ADDITION to another moving violation (speeding, unsafe lane changes, tailgating, weaving, etc.) THEN I would agree. But to pull someone over JUST BECAUSE they have a cellphone next to their ear is a waste of officer time and taxpayer dollars.

I can't believe I am the only one here who sees how STUPID this law really is.

>They should also ticket idiots who do their hair and
>makeup, read the paper, bend down to get something under the passenger
>seat, etc., etc.

Yes they should ***IF*** that person drives unsafely or causes an accident as a result. Otherwise, no they shouldn't. I'd rather my local police were out fighting real crimes thank you very much...

This is true. It is a matter of conecntration level that is required
to talk on the phone. Talking on the phone is an asynchronous
activity which by its very nature requires much more concentration
than say talking on the CB, which is synchronous communication.

RG-6U is fine! Keep your runs as short as possible... 800 MHz and up, falls off sharply with long cable runs. Go to Grove, or Radio Shack and buy some of their coax weather-proof tape too! When water gets into those F connectors, it's bad news.

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped) for 1 to 10 issues. If you
are interested in over 10 issues or the entire collection, make me an offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the actual shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Feb & April - Dec $1.00 ea.
1994 Jan - Oct & Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea.
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45

161.130 MHz is/was Conrail's system-wide Ch 4 - PBX and MofW frequency.
CSX's dispatches virtually everything out of Jacksonville, FL, with links to
the appropriate divisions. Watertown is on the ex-Conrail line from Syracuse
to the Grand Trunk out of Quebec, so don't be suprised if you start hearing
southern accents up there (should be fun if they have to handle run-thrus
in French).

Hi,

I'm involved in some research as a consultant for my friend's work at university. We do examine and evaluate wideband voltage controlled oscillators (recent and future). Frequency coverage needed: .01-3GHz.

Would you please inform me about possibilities where to obtain functional diagrams and/or schematics of some wide coverage receivers/scanners? Required transfer of data: e-mail, ftp, http... Since we've no time reserved for direct communication with vendors now.

Any response appreciated.

Please, excuse indirect content of this message. Thanx in advance!

I have one with a case, manual and two battery packs (one is brand new).
Like an idiot, I threw the box away two weeks ago. The unit is unmodified
and I am the original owner. The orange paint on the left leather case
strap metal snap has half flaked off (not on the radio, on the carry case).
The scanner works perfectly. I rarely use it.

I don't think the reasons for making this law would make any sense if you were trying to enforce a similar law regarding holding a mic in your hand for your radio, or operating a scanner while driving.

Cell phone users who don't have a hands-free device take one hand off the wheel and hold it up next to their face for extended lengths of time, elbow-out in a decidedly awkward position. This alone, absent a cell phone, in many states, would get you pulled over for unsafely operating your vehicle. Both hands on the wheel as often as possible is pretty much the rule.

A "key" on the other hand, is not the listening end of the radio device. Even if you do obsessively hold the key in your hand while you drive, you can still essentially keep at least one hand and one wrist on the wheel. What's more, the hand holding the key is generally fairly close to the steering wheel, and only the most anal of drivers would think twice before dropping their mic to deal with a small emergency.

Whereas a cell phone owner might have a second thought of "Oh crap, this phone is worth $100 i don't want it kicking around the floor of my car" right before going for the emergency brake, I've yet to meet anyone who wasn't perfectly willing to virtually throw the mic to the wind at the slightest provocation - it's on a nice thick coiled cord and it'll stay pretty much directly south of the radio.

It's really a conceptual thing. two-way radio is a half-duplex operation and as such humans generally treat it passively. If you try to interrupt someone while they're talking to you, they simply won't hear you, so all you can do is wait for them to shut up and think of what you're going to say back.

Cell phones on the other hand almost always give at least the appearance of being a full duplex, fully engaged device. this makes humans feel a need to keep right on top of things, and stay in the conversation.

It's all a matter of the level of interaction and attention an average (or, ok, we're talking about business managment types here, below average) person psychologically feels they need to give the device in question.

But really, this is a feelgood law. We really don't have dramatic scenes in movies where the protagonist expresses his or her disdain for CB bubbas or people who search for new radio stations while driving. There are a lot of voters out there who positively *hate* people who

talk on a cell phone while driving. This isn't about "taking away more rights" - this is a cheap ploy for votes. And that "opinionated moron" vote is *huge*.

I *love* the way they describe that as "Full Half-Wave Antenna. Best reception on all bands" "Especially 40-50mhz"

Why buy that antenna? Why not just buy 130 inches of wire and solder it to a BNC connector like they did?

Sadly, I'm going to have to be very patient. See, both of these (and
the corresponding base) have some neat features, but they have a weird
mix of features.

I'm going to wait for Uniden to come out with something to compete with
these two, and then consider buying a bigger, badder trunking radio.

Or maybe I'll wait for these to come out and drive down the price of a
245xlt. Who knows.

3162. Fixing Old Scanners

Newsgroup: rec.radio.scanner
Date: 1999-09-04 00:00:00 UTC
From: Bob Nickels <ranickel@mwci.net>
Message-ID: <rt3rttu28os8@corp.supernews.com>
Source record: 108077

I can fix old tube radios that are over 50 years old, but I can't seem to keep a scanner running more than a few years... and I can't quite figure out why the seem to die young.

OK, the old Bearcat 210s and the BC-350 that served me well for many years used obsolete parts and goofy circuits and were built like crap, I'll buy that. But now the little 20 channel Radio Shack PRO-508 that I use as an auxiliary scanner has died. Well, it's not completely dead - it started losing memory when power was removed, and now I can't program any frequencies. Scan and manual mode selection works and there's squelch noise so maybe it's not a complete goner.

Has anyone run into this? Pushing "Reset" doesn't help. My only idea is to check the "program" button on the keyboard - it looks like a much better design but no "user serviceble parts" visible. Appreciate any suggestions!

73, Bob W9RAN

Actually, that's an excellent and scientifically signifigant question.
Sort of.

If they come back and tell me they put a cell phone in the cage, rigged
it to auto answer, and talked to it all day and the rat got tumors, then
i don't have to wonder what sort of transmitter and antenna they used.

See, scientists have an unerring talent for proving whatever they set
out to prove, if they want to bad enough.

For the record, 2m is the spectrum of FM radio most readily absorbed by
the human body.

From: Bill Markut <markut@genevaonline.com>
Message-ID: <UEmA3.5421$gW5.1659218@homer.alpha.net>
Source record: 108079

I know this has been discussed before in various forms and I have looked at past discussions regarding this question...but,....

What is the best mobile antennae for a handheld unit with bnc connection, BC80XLT? I am most interested in the 150-160 and 800-860 ranges. I've seen a lot of discussion regarding a mag-mounted antennae from Radio Shack but there was no part number.

At any rate, any opinions about what to get would be great. I already have the nine-stage telescoping antennae from Radio Shack on this radio so if the mobile antennaes would not be better than this one, I would appreciate knowing that also...

Thank you in advance!

Capacitively coupling the 2026 discriminator to the data slicer should straighten things out. It may also be helpful to put 10K ohms in series with the capacitor if you leave the data slicer connected to the discriminator all the time, even when it is not powered up from the computer serial port.

Not if it prevents someone from killing someone else. The problem
is, a lot of people on cellphones don't pay attention to their
driving. I see it EVERY DAY. People yaking away with a phone in one
hand, the other arm/hand waving around while they talk as if their
standing around in a building or something. If these dipshits used
hands free phones or waited until they pulled over I'd have no problem
with it. But they DON'T.

>I can't believe I am the only one here who sees how STUPID this law really
>is.

I fully understand what your talking about, but because there are a
LOT of irresponcible driver idiots out there that seem to refuse to
drive in a safe manner we need to do something about it.
I think a lot of laws are rediculous myself. You can inact 500 new gun
laws and they would not do a SINGLE thing to reduce gun violence.
waiting periods? A joke. Criminals don't get their guns from gun
shops, DUH! They get them off the street, for far cheaper and with no
chance of tracing until caught.

>>They should also ticket idiots who do their hair and
>>makeup, read the paper, bend down to get something under the passenger

Traffic nets are generally conducted for the purpose of passing message traffic using the ARRL National Traffic System (NTS). These nets use a VERY formal set of procedures and message format, and the system is only a little bit less efficient than the US Postal Service for getting a message from point A to point B.

The messages are typically rather uninteresting to anyone but the original sender and intended recipient. These nets are also typically found on the HF bands, though occasionally they can be found on 2 meter repeaters.

2 meter repeaters might be interesting for other reasons...for instance, my club has a traders' net every week for people to buy and sell equipment. Most of the 2-meter "rag-chewing" is done on these repeaters, as well as nets for local emergency communication volunteer groups (ARES &/or RACES)

Most 2-meter output frequencies can be found between 146.61 and 147.39 MHz.

Here's an option for the DIY type. I visited my local Radio Shack
a couple of weeks ago and I noticed a recycle bin for dead Nicad
batteries on top of the battery display carousel. I also noticed
several packs with the identical connector as the BC235/245. I
asked permission to hack off a few connectors. I was handed
a pair of cutters and told to 'help yourself'. I now have a several
of the Uniden style connector as well as a couple of other styles.
Radio Shack has their faults but sometimes they are a plus. ;-)

Whats next.... making it against the law to carry passengers in your vehicle, a talking
passenger could be just as distracting as a cell phone! How about eating in your car,
shaving, puting on make-up, watching that cute looking babe walk down the sidewalk,
those obnoxious little rugrats causing havock in the backseat, the tourists who don't
have a clue where there going or what thier doing, the senior citizens who like going
30 mph less than everyone else....why don't they just outlaw driving all-together and
there won't be any accidents at all. But then the police would not make any money
on traffic tickets..... they could allways make it illegal to walk and talk on the phone at
the same time. WHATS NEXT!

Use the RG6. I have been using RG6 for years and it works great. The lack of loss by using RG6 more than compensates for the impednce mismatch. You are just receiving with your scanner so don't worry. If you were transmitting, you would want the 50 ohm cable.

Good Luck and Happy Scanning ...

Hello Mr. Skipjack (Y2K)....
I totally agree with your above comments... so much so that I went to deja.com and did a search for your posts.... my my....no wonder you know so much about useless crap... and spamming..... but all is forgiven.... I even saw some more posts you put on the group about wanting bad things to happen to me.
I only ask what have I done to you... sure I post about "The Adventures of Scanner Dweeb"..... and you know why... because it's about scanners.... hence the reason I put it on a radio related newsgroup.
I have been getting a lot of very nice e-mails and newsgroup comments from many fine people who tell me they really enjoy the series.... I really appreciate that and that is why I keep it up..... so one or two bad apples, like yourself, are not going to spoil it for the nice folks out there.
Bottom line.... as I have already seen suggested by another nice person in regards to your comments... don't look at the comic or at posts related to it... it's that simple. Life is too short to get high blood pressure over something like this so settle down, relax and only view the items you enjoy.
Thanks for your support of the hobby of radio scanning.
And most of all ...have a GREAT day !

Not where I live it isn't, The Air Observers always request the ground
officers to go channel 6 PR, and then they communicate on 452.050.
It does seem the frequency you mention is an Air to Ground one,
but within Merseyside boundaries they definitely operate on 452.050.
I live in South Liverpool by the way.

Has anyone else got any information?

Hello again Mr. Skipjack,
I forgot to answer your concern about the "ripping off links" comment. After reading this you may feel a bit "silly" but I do not intend this explanation for that reason. I just figure you don't have the expertiece of html coding and web site development so I want to clear it up for you.
Most of the links, as you call them, on my site are re-directs to other screen name areas I have on AOL. You see AOL only allows you 2 Meg per user names. I must create multiple user names to be able to get use of the full 10 meg of web space. So when one of my "links" actually appears to go to anothers site it is really my site files under different names. I would suggest you do some reading or better yet develop a web site and you will then really be able to appreciate the work that is involved.
No harm done though.... I do have some links on the site to others but most of the work is mine including all the illustrations, comics, etc. The links to others are put there to give them the credit they deserve for putting together their sites. And as I have done with others who have slammed and flamed me...
I offer to put a link on my site to your site should you ever develop one. Please let me know the URL when you do so I may help you promote the hobby of radio scanning.
And again.... have a GREAT day !

What? You find ARC8200 'limited for memory management' ?
What do you really want, somebody that holds the scanner for you and
programs it? Go for this software, it's the best you can get.

Hi All:
One Watt @ 800 MHz over time will cause tumors in lab rats. The medical profession knows that, Uncle Sam knows that and the Cell phone manufacturers know that. The FCC has already released new rules for Hams so that their particular installations can be checked for hazards. HF is considerably less dangerous than (near) micro wave energy from cell phones. It seems that the concentration has been placed on portable, hand held phones. Think about it; the antenna is almost touching your temple while delivering 1+ Watts of ERP RF.
Just some thoughts.
Bob

If you are correct you will be able cite a reference. I can cite several that contradict you. The new regulation for hams amounts to a voluntary statement saying "my shack is clean." The study finding higher rates of cancer among hams has been discounted as statisticaly insignificant. Citation available on request.

Speaking of ERP, the FCC reassigned the 800 MHz frequencies to cellular telephones from their previous assignment as UHF TV. Our local channel 56 is near the same frequecies and is rated in Megawatts. People live next door to the transmitter.

I second this recommendation. I would also suggest you use a good quality cable like Belden. Forget the cheap stuff that RS, Wal-Mart, etc., sells. Also, make sure you use "real" (screw-on) cable connectors. The cheaper "push on" connectors should be avoided.

Chuckle. Actually, for every trial/test/expert there is that says the
above, there are trials/tests/experts that say the exact opposite.

This has been debated within the industry for years, and will continue
to be debated, as there is no proof either way.

Insofar as the HAM community, please check the rules again, They are
nothing...

3209. ADI vendors w/ good return policy

Newsgroup: rec.radio.scanner
Date: 1999-09-04 00:00:00 UTC
From: kamst39@pitt.edu

Source record: 108141
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

I've been looking at purchasing an ADI PR-52 6 meter handheld rig and I'm interested in finding a mail order company that has a decent return policy. I think its particularly hard to know before you buy that what you are getting is of decent quality and that you are going to like it. You can see pictures in mail order catalogs, or on websites, and read emails and usenet posts about it -- but for me it requires holding it in my hand, playing with the controls, and what not before deciding whether it's worth the hard-earned couple hundred dollars the equipment costs.

I don't have any local dealers of ADI, that I know of.
The mail order companies I usually deal with have terrible "no-return" policies on new equipment - which, despite understanding their situation - doesn't make me a happy shopper.

The company I work for has a 45-day money back guarantee on ALL products, despite the fact the manufacturers may or may not reimburse us for the loss. The idea is that you only carry GOOD QUALITY products, so the amount of people returning items is relatively low. And, even in the event someone might take advantage of the situation, you still WIN because you have 99% happy customers, and thats a good thing, especially for repeat business.

The reason for my message is this. Does anyone know of a reputable ham radio mail order company that sells ADI products (http://www.adi-radio.com) that stands behind their products with some sort of money-back guarantee? Or perhaps one that assesses a 15% fee on returned new merchandise?

Thanks,

Keith

Alright Tovarish, what does DDT have to do with this group?
Second of all; would you like to have a planet barren of all life?
Third of all; I cannot believe the fact that alot of the posts actually
think that this is a bad law. My my, how far we have come and how
complacement we have become. Remember that everytime that somebody
purchases a cell phone a part of that money goes to the CTIA lobby in
various countries. Remember that it was the CTIA that mandated that
Congress censure certain frequencies to appease an industry. Too bad
that we cannot do the same wit hthe stupid NRA. Now ther is something
that needs to be stopped

From: Val Davis <vdavis@nerds.com>
Message-ID: <37D2CB66.7B47@nerds.com>
Source record: 107895

Greetings all.

My name is Val Davis. I was a pretty good friend of Bill's during the last few years of his life.

I met him through rec.radio.broadcasting in 92 and continued that relationship through our move from Texas to Iowa where Bill stayed with my family several times. I have 6 kids and Bill could just waltz in here, pick up the baby and bounce him around without making anyone cry. My kids love him.

I provided Bill with some of the equipment he used to maintain the newsgroup and usually repaired his system for him when he had a crash. He moved to Minnesota a few hours north of me so he would come down every few months and we would fix, upgrade, or just hang out.

I posted the memorial on the airwaves.com website and I am currently working with Pat Townson (the guy who taught Bill about newsgroups) on keeping the newsgroup going.

I have been in contact with several of his friends and we have been discussing the future of rec.radio.broadcasting.

One idea that was brought up was that of rotating the responsibility. I have two jobs and 6 kids so bandwidth is an issue.

We will let everyone know our intentions through the airwaves.com website.

Also, we do not have information yet on a funeral. Bill's body is being held by the county pending contact with a family member. Bill had only one living relative (a half sister) and they are trying to locate her.

We do not know how the funeral will be handled, but I spoke with Bill's fiance this morning and we discussed a memorial fund to help cover funeral expenses.

Any and all responses are welcome.

Thanks very much.

Val Davis

Hi Gang,
I'm trying to program 900 mhz cordless freqs. into my RS-Pro-2045 and it
won't accept most of the frequencies. (stepping problem. 12.5 vs 30?)

If my scanner won't do this, what do I need to look for, especially in a RS?

Thanks and please e-mail me too.

Bob

It's because the cordless phones are stepped 30khz at a time, and your scanner isn't. This was probably intentional.

Every brand of cordless phone pretty much has it's own set of freqs, tho most of them are in the same range. You would probably fill at least 60 channels trying to program them all in. This would be less than rewarding. It would also be, as I'm sure you know, illegal.

- Eric

Hi Clint,

Thanks for the reply.

Clint Bradford (clint@clintbradford.com) wrote:

: I don't know if you're asking too much of a company or not, Keith.

Maybe I am? Like I said, my company (mail order catalog selling high end networking equipment), will take ANYTHING back, regardless of price or reason within 45 days. We resell these units as 'Class B' inventory and usually make back at least the 'cost' of these units. Perhaps I'm just used to 'excellent' policies in comparison to 'no policies'.

: Let's get back to the HT. There are published reviews of that ADI
: product. There are user groups that discuss its merits. There are
: amateur radio clubs in your area - and surely someone there has one of
: these units! There is a lot of research material you can discover on
: your own...before purchasing.

But none the less, all the research on the world is not going to match up to holding one in your hand - bottom line.

: But you want to be able to "test drive" a HT, but be able to return it
: in a couple of weeks...

: I don't believe you can expect to "have it" both ways: rock-bottom mail
: order prices, and the most liberal of return policies. Firms like HRO
: and AES are working on very slim margins on HTs. You are asking that
: they ship you a brand new unit, but accept a return in a couple of weeks
: and demand a full refund. They cannot sell the unit as "new" ever again.

Just because the mainstream 'big boys' don't do it doesn't mean that we have to adjust OUR expectations to meet their limited policies.

There are companies that do this. Examples include

Example 1:

http://www.ccrane.com

Quote from their web site :

We have a 30 day, full refund, satisfaction guarantee on all items sold by us. Returned items and closeouts do absolutely no good for our company.

We reduce the price to acquire our capital back.

Example 2:

http://www.universal-radio.com under company policies.

Returns must be within 14 days of purchase. Returned items are subject to a 15% restocking fee. Shipping is not refundable.

Companies with fair CONSUMER ORIENTED return policies are out there. It took me awhile to find these companies yesterday, but I did locate them.

: Maybe I am just spolied by having a Ham Radio Outlet only thirty minutes
: away from me...but I sure would perform research before purchasing any
: radio...and I wouldn't think of asking my dealer for a refund because I
: didn't do my own homework beforehand.

Yeah, having a HRO nearby would be nice. And I do spend A LOT of time researching my radios before buying them - but it's certainly much better to play around with the equipment YOURSELF beforehand.

The best hint I can give you is to just use the scanner and keep it charged up. There are many who would argue that it is better to run it down periodically before recharging, but then you'll have a discharged battery possibly at a time that you wish you could use the scanner.

If you treat a NiCad well, you'll get 24 months use out of it. If you treat it poorly you will get two years. ...plus or minus some depending on how much it gets used.

Replacing that 30 dollar battery every two years amounts to about $1.25 per month.

Oh you can still break the law with it if you really need to. There's
no cellular capability, but i'm sure you can pick up cordless phones
with it.

If you really wanna feel like a rebel you can insert a slicer on the
discriminator output and decode MDT's.

Other than that, no, it's in full compliance with all US laws.

If you want good HF, I certainly wouldn't recommend the WinRadio or the PCR1000. They try to do it all but do best on Vhf-Uhf. The HF is basically a throw-in. I evaluated both of these. The Fairhaven does look rather interesting, but I know of nobody who has owned one to say just how good.

Source record: 107918

Bob and scannerheads:
I have been using various scanners since they were invented back in the 50s or early 60s. Still have one of the original crystal controlled track-tuning Bearcats running, and a 4 channel UHF crystal Regency which was only turned off for a few hours earlier this year to be recapped since I brought it home. I bought it from an Olsen store in Dallas way back; I'll bet no one else remembers there ever being an Olsen store outside Ohio. I also have had a Bearcat 210 which went bonkers, while an older 210 still works fine, and had a 250 which swallowed the unreplaceable chip and died. Then, there is one of the Regency MX 7000s which has the hated membrane keyboard, and hardly audible audio, but still works as well as it did when I bought it new in 197?. My opinion is that the designs are typical consumer trash with everything operating with no margin, either on power dissipation or voltage rating, or they use special chips which exhibit some of the infant mortality problems which get fixed in normal chips which have a long production run. I remember some of the early transistor reliability problems (Purple Plague comes to mind) that get solved if there is enough pressure and money to do so because of time in market necessary to recover design costs. There just aren't enough scanners built to ever merit any real design effort directed toward long term reliability. Besides, it would kill the replacement market.

Actually, they've already published a new ScanFan with all the trunking IDs in it. You can find it at Ham Radio Outlet for starters. There might be a few other places. The book is pretty comprehensive and it includes the IDs for SDSO's RCS as well some other counties.

It's not as thick as the other ScanFan books but it's definately worth it for the San Diego trunked listener.

I'm using a Diamond RH-77CA (about $25) on a RadioShack window mount bnc cat number 20-023, about $10. this comes with 6 feet of rg58/u which isn't the best coax but for short lengths certianly isn't denying me the ability to hear the trunking system 20 miles from me.

Basicly it's a little clip that slides over the top of a car window, i believe allowing you to roll the window back up, although mine is clipped to one of the rear "wing" windows that doesn't roll up or down but tilts out about two inches. This style of mount is actually better for your car than a magmount as it can't damage your paint job, and since you don't need a groundplane to recieve transmissions it doesn't matter that it's not in the middle of the roof of your car.

The RH-77CA is a flexible antenna about 14 inches long designed as a 2m quarterwave for handheld transcievers. It just incedentally makes a really good scanner antenna, at least by various reviews. I sure am fond of it.

This antenna is available from ham radio shops other than radioshack. http://www.strongsignals.net has reviews of this and several other bnc antennae for handheld scanners.

This works pretty well on my car, and i also use the Diamond antenna directly on the scanner. It's far better than the stock duckie that came with my 235xlt at picking up everything between 29 and 500mhz, and is at least as good if not maybe possibly better at picking up the 800-950mhz range than the stock duckie.

I'm hard pressed to compare this antenna to the telescoping antenna we also both have, in terms of reception performance. I think the telescoping antenna is better at picking up weak VHF frequency transmissions, but not a whole lot better. On the other hand, the flexible Diamond antenna is far better at battling with foliage above the car at high speeds than the telescoping antenna is likely to be.

I think the radioshack magmount you're asking about is catalog number 20-032, $29.99. I've never used this antenna, so I can't claim to know how good it is at recieving 800Mhz frequencies. It's length should make it great for the 150-160 range, but might be a hinderance to 800Mhz frequencies. It's hard to tell without someone graphing test results.

Remember - higher mhz = smaller waves = shorter antenna. The best omnidirectional antenna for your specific frequency is a straight antenna cut specificly for that frequency. You want to pick up two very different waves, so predicting from descriptions of length, positions of coils, etc, whether or not an antenna will work better than another

antenna for both of the ranges you're trying to pick up would require a lot of study into energy physics, and would take a lot longer than just comparing it's performance to another antenna and saying which one is better.

Maybe someone else has advice regarding that magmount and 800mhz frequencies. I believe radioshack is being completely honest when they say it will pick up 30-1300mhz, but so will a paperclip half unfolded and inserted into the bnc connector. The paperclip just won't do it very well. Or maybe it will, I'm no physicist.

- Eric

Thought the EPA already had a ban on DDT. Great law that saves wild life and allowed the Raptor population to start regaining losses.

Comrades, we need the EPA to extend the DDT ban to Internet!

I was going to purchase a pro 92 but since they are going to wait till
November I went out yesterday and purchased a BC 245XLT instead.
I don't see any reason for Radio Shack to wait that long to sell them other
than a sales scheme.

Depends on whose view point your looking at this from.
For example:

City Offical: Good source of quick and dirty revenue. People usually pay
fines less than $150.

Cop: Good source of quick and dirty arrest to booast performance data at job
evaluation time.

Court officals: see City Offical

Poltical Officers (Legislative Lackies): Looks good on paper and goes along
with Middle Class, Age Group 40
something
Soccer Mom opinion polls.

No one yet has provided statistical facts. How many deaths were attributed to cell phone, ham, cb, police radios and the other activities alluded to in this thread?

Who will take ownership of this project? Then report back to the group with meaningful stats rather than conjecture.

Let us set a deadline of 30 June 2000 for the final report, with interim updates issued every 30 days, and status report to committee by say end of first quarter 2000.

A mission statement to cover all modes of transportation and travel paths could be:

This mission of this report is to identify, clarify and rectify all points and contentions regarding cell phone and radio operation, and other activities of human endeavor while operating a vehicle upon public and private road ways.

Rad-Shack's magnet mount scanner antenna is good for 25-512.
Get a mag-mount cell-phone antenna and put a BNC on it for 800Mhz.

A friend of mine has a Magellan which shows a very unusual problem.
It reports the correct position, but the displayed time is 2 minutes off
since the rollover. That shouldn't be possible, but there it is.

All three of my GPS receivers weathered the rollover with no ill effects.
They are a Garmin 45 (not XL), an Icom IC-22, and a Tripmate. I made
sure to have them on and tracking during the rollover, so they didn't
require a long time to reacquire and download a new almanac.

Right. The RS antenna really loses it on 800Mhz. Not sure whether this is due
to the antenna or the long length of RG-58 coax (which is totally unusable at
800Mhz.)

Yea, right and the oil you put in your vehicle only lubricates it when its sitting in your drive not running too..... also your water pipes can only flow so many gallons per minute for water any other liquid wont flow through it.... Need I go on. The chart works for TRANSMIT, RECEIVE or whatever, RF IS RF it doesnt know whether its transmitted or received and neither does the CABLE!

I don't know if you're asking too much of a company or not, Keith.

Suppose you bought a new automobile. Plunked down the cash, and drove it off the lot.

But two weeks later, you decide it doesn't quite fit your needs. You want to return it with no questions asked and no "restocking" fee.

Let's get back to the HT. There are published reviews of that ADI product. There are user groups that discuss its merits. There are amateur radio clubs in your area - and surely someone there has one of these units! There is a lot of research material you can discover on your own...before purchasing.

But you want to be able to "test drive" a HT, but be able to return it in a couple of weeks...

I don't believe you can expect to "have it" both ways: rock-bottom mail order prices, and the most liberal of return policies. Firms like HRO and AES are working on very slim margins on HTs. You are asking that they ship you a brand new unit, but accept a return in a couple of weeks and demand a full refund. They cannot sell the unit as "new" ever again.

Maybe I am just spolied by having a Ham Radio Outlet only thirty minutes away from me...but I sure would perform research before purchasing any radio...and I wouldn't think of asking my dealer for a refund because I didn't do my own homework beforehand.

Does anyone know when we can expect the Uniden BC780 (mobile trunktracker)
to be out?

Any other information on this particular scanner?

Thanks

3271. 2004 what happened???

Newsgroup: rec.radio.scanner
Date: 1999-09-05 00:00:00 UTC
From: Al & Lo <alxlo@valinet.com>
Message-ID: <37D29708.19D26496@valinet.com>
Source record: 108023
Cross-posted to: alt.radio.scanner,rec.radio.scanner

My 2004 ,which has run every day since I bought it new, just went south.
It was being pretty quiet, then I heard an off freq. call on the fire
channel. Curious , I ran over to find the priority channel had changed
from 154.770 to 154.7714. I then check the rest and found some still
proper and others, such as the FRS freq's changed by alot (from the
400's to the 200's).
I tried a reset, no change,
unplugged it for an hour, no change
try to re -enter 154.770 and it programs 154.7572!
Anybody know what's going on? I've never had a single problem with this
unit (except losing the EL panel 2 years ago)
Sad and lonley (my friend's sick!)
Very concerned, Al

Well, over short lengths it's not that big of a deal. You're talking like audiophiles that use half inch thick speaker cable when the other side of the connector block on the back of the speaker is 24 gauge or smaller.

Like i said, the 6 feet of rg58/u on my window mount hasn't denied me any frequencies i can pick up with the antenna directly on the scanner. If you were running 30 feet of it, it might be quite a bit different.

On the other hand, there's no reason an enterprising individual couldn't buy the RS antenna, disassemble the mag mount, and replace the rg58/u with rg6 or greater.

- Eric

Greetings Scanner Dweebs!

I am the proud owner of a used Bearcat 210XL purchased yesterday at a yard sale for $10. Add another three or four bucks for a power cord and some clips to modify the power cord to connect it to the odd sized receptacle on the back and, yeah babay, it's doing it's thing right now!

Got a list of freq's for my county in MA from the web and have eighteen channels programmed.

Have spent the 1st half of the day searching, prior to posting. Requesting any info about the functions of the units buttons and the potential for mods.

Thanks,
Mike Collins

You need to keep in mind the level of conversation that goes on over the two different services. You almost never have a serious conversation on the CB when your driving. Maybe once in a while when your parked and trying to talk skip or contributing in a round table, but while driving almost never. People on phone calls will talk about serious life and death situations which might end up taking all their concentration.

You can get the 1600mAh pack from Primecell for $17.95, twice the capacity
They list them on eBay

Spare me the rhetoric. I'm lucky enough to live north of the so
called Land of the Free. We don't have such a ridiculous law. You must be
the dumbest cop in Warren, PA.

Since it's unlawful to "descramble a scrambled transmission" it's
unlikely that scanners with DACs in them will become available.

Of course I wouldn't assume that someone won't find a way to do it,
it'll probably just require some knowledge of electrical engineering to
implement.

Not true. TV is going digital in this country. Does that mean that we
will need to unscramble the signal to listen to it? I think not. There
are various forms of digital transmissions that are in the clear:
Packtor,
Amtor,
FEC
RTTY,
etc
etc.
Just becasue a system is digital does not mean that it is scrambled.
Digital, supposedly, is narrower thus it frees up more frequency space.
APCO 25 is a digital standard. Now if only Radio Shack, Uniden, AOR,
ICOM, etc would adopt this standard to theie Scanners; everything would
be okay and we would know how are tax dollars are being spent.
Propriety systems, now that is a different story.

This is a bit of a premature question, but of interest none-the-less. I live in Salt Lake City. I wonder if anyone has any idea if there are frequencies allocated for use by officiators, judges, and other staff for the Olympics. If so, are they the same ones year after year, location after location (as long as it's the USA hosting)? If I wanted to listen to the folks coordinating the opening ceremony, do I have any hope of knowing ahead of time what frequency they will be communicating on? How does all this work? :)

I guess I'm hoping for the holy grail; the list of Olympic frequencies, and frequencies used by various participating teams.

Any information (even if it's to tell me they don't talk on the radio) would be helpful.

Thanks,

Dave

How complacent have we become as scnner owners. Did you forget that for
every cell phone purchased a part of the money goes to support the CTIA
which lobbied Congress to censure sertain frequencies from scanners so
that drug pushers could have free regien

As a general rule computers and sensitive radio receivers do not mix. The problem gets worse the lower the frequency you want to listed too, though even at some high frequencies there can be spot of noise. Co-ax cable is not perfect so some noise can always leak into it, especially on a wide band scanner which may not always present the perfect match to the cable and antenna. Any mismatch will allow the coax outer to act as an aerial.

You may not even be aware of the problems as an overall increase in background noise is not always noticeable if it is broad spectrum.

To protect against this ;

a) Keep all radio leads, yes power ones as well, away from PC pleads.
b) make sure that the PC is well earthed and that the case is metal and screwed well down.
c) preferably add additional fltering, in line variety, at the IEC connector to the PC power supply, this keeps spikes out of the PC but also keeps the PSU noise off the mains wiring
d) fit clamp round ferrite's (from Maplins) around all other leads that exit the PC, keyboard, printers, mice's, etc.
e) use double screened co-ax to the antenna if possible.

Good Luck,

BS

MOBIL NOISE - PART II
By N1CSS

I dicussed, in part 1, how to get a decent ground connection to the rig and vehicle, in order to suppress some of the noise we get when doing mobil scanning. If this worked well for you, then I am really glad. But, there are mobils that are "tough cases", and don`t really respond until we take some further steps to correct this situation. We will take a look at these this time, and some remedies.

MAG MOUNT VS STANDARD MOUNTING METHODS

Mag mount antennas are popular, there is no disputing that fact. What could be more convienient ? You just slap it on the roof when you want to use it, and throw it in the trunk when you don`t ! However, mag mount antennas have one drawback, and that is the lack of an actual ground connection to the car body. I bet you are saying "But we already discussed ground !" Well, we did, sort of. Ground is a funny thing at RF frequencies. You can ground the braid inside the vehicle, right at the rig, but that ground may only be effective for two or three feet up the coax from there ! I am not going to launch into a big tech discussion here, with foot - long words, and math that would give you (and me) a headache. You will just have to take my word for it. And, the really sad part is, the higher the frequency that you monitor, the worse this gets ! If you still have high noise in the car, then this is the next thing we are going to look at.

The average mag-mount antenna gets its "ground" from the magnetic attraction between the mount and the metal of the car body. This is nowhere near the quality of a good, solid ground connection to the body. We are relying here on the mount, the paint on the car, and the metal underneath to form a "capacitive ground connection". (I scared myself with that one !) The smaller in diameter the magnetic mount is, the less effective this is. It is a simple matter of total area covered by the mount.

I have become really fond of used mobil CB antennas, especially the gutter - mount and trunk - mount type, that use set screws to hold them in place. Let`s say that I wanted to listen to the standard Police band, and I had a gutter mount type of antenna, with a center load in the middle of the whip and another old antenna laying around that had either a three - foot or foot and a half stainless "whip" that would fit into the base of the gutter mount. I would be in business ! Three feet is about a half - wave at 155 MHZ, and and 18 inches is a quarter wave ! All I have to do is, remove the center - loaded whip from the gutter mount, and substitute either a three foot or foot and a half whip in the gutter mount, and I am all set to monitor. In some cases, the original center-loaded whip has 18 inches either

above or below the center coil, so all I have to do is, clip it off ! I can testify to the fact that this actually works, since I have used this idea for about 10 years ! Admittedly, the three - footer will pick up more signal, and further, but then, an antenna you can buy used for two or three bucks, we aren`t all THAT choosey !

The only thing we need to make sure of, is that when we go to mount the antenna, be it trunk mount or gutter mount, is that we scrape away the paint under the mounting screws, so they make contact with the metal body of the car. This is why people with fancy cars favor trunk mounts, since the tiny scraped spots don`t show, while on my rusty old 1 - ton GMC plow truck, I am not so particular. I don`t HAVE to scrape !

I want to emphasize the point that I am NOT talking about antennas that have loading coils in the base of them. (That is in another file). Just the ones that have a "lump" right in the middle of them. These are the "center - loaded" ones. Check with your local CBers, they usually have at least one guy that collects these, because he likes to experiment with them, and he may have a garage full of them.

Why am I going to all this trouble, just to ground the braid on the other end of the coax ? One simple reason : THIS SECOND GROUND WILL OFTEN KILL THE NOISE DEAD !

THE POWER LEADS - HOW TO POWER THE RIG
AND CUT DOWN ON THE NOISE

Now we come to noise that gets in through the power leads. I have neglected this subject, because in modern scanners, it isn`t as much of a problem as it was in years past (or is it?)
If you still have lots of noise, then it is time to find out which route it is taking into the radio. Start the car up, and disconnect the coax from the radio. If you still have about the same noise level, then the noise is probably coming in through the rig`s power leads. There are various cures for this problem. Let`s try the inexpensive ones first, since neither you nor I are "made of money".

THE CIGARETTE LIGHTER PLUG - NOISE,NOISE NOISE !

The cigarette lighter plug is probably the worst place to power your scanner from, since there is no noise limiting attached to it. Cigarettes don`t care if they are lit from a "hash source", so they didn`t filter the leads. The BEST place to power the rig from is the car`s radio fuse in the fuse block ! This is already filtered, using a big capacitor, which goes right from the fuse to ground. You will see it , mounted right near the fuse block, with a sheet metal screw holding down the bracket the metal - case cap is mounted in. If you have a scanner that is permanently mounted in the vehicle, then route the positive power lead over to the radio fuse, and hook it up there. You may be amazed to find that the noise virtually disappears in some cases! AND it didn`t cost a DIME. It was included with the car. Slick.

Handheld owners don`t have it so easy. Sure, we could re-route the cigarette lighter wire to the radio fuse, but it will just burn out the firt time

somebody lights a cig from it. The radio fuse was never designed to carry the 8 or 10 amps that the cig lighter pulls when in use ! Nope, another solution will have to be found .....
Fortunately, Radio shack can come to the rescue, with their high - power noise filter kit. What you do is, you get one of these, and install it in the cigarette lighter`s power lead ! Make sure it is good for at least 10 amperes, and you can let the smokers get back in the car (They look kind of cold out there). They aren`t giving these filters away, but what can you do ? You still want to take that handheld out of there when you leave......

Well, this file has reached "news group length" again, so I will continue my ramblings in the next file, where we will go after the noise at the source---- 73

THANKS

My four strip that my computer and printer are plugged in to is spike
protected.
What sort of filter would you recommend for the IEC connector ???

>fit clamp round ferrite's

what do the clamps do ??? do they take out the static or is it something
else ???

I have noticed when my screen saver comes on you can tell by the back ground
noise on the scanner.

Would it help any to fit an earth lead to take the static off the monitor
???
Would it help any to fit an earth lead to the case and earth it to something
like the metal on my computer desk ???

I understand a bit about electronics... what I don't understand is how
electronics affect my receiver.
THANKS AGAIN
RICK.

Besides the following nine, some scanners include 163.275. The NTIA has
it allocated to NOAA, but no one seems to know what it might be used for.

From the FAF - Frequently Asked Frequencies
on http://www.strongsignals.net/htm/oak_faf.htm

Weather - NOAA broadcasts

Ch Freq.

1 162.550 161.650 } Environment Canada
2 162.400 161.775 } (marine weather)
3 162.475
4 162.425
5 162.450 The weather alert signal is
6 162.500 a 1050 kHz tone for 5 secs.
7 162.525

3336. KS/MO Column 0999

Newsgroup: rec.radio.scanner
Date: 1999-09-06 00:00:00 UTC

Kansas Column 09-99

This will be the 47th edition I've put together for the KS/MO Column. For those of you that are math challenged like me, that is just one month shy of 4 years! That is a long time. (Bet you know what is coming nextï¿½) In this column, I'd like to pass the torch to someone else and have them carry on with the KS/MO column. It isn't that I particularly tired of it. Actually, I am going to miss it to a certain degree. My lovely and gracious wife, Lois, and I have started a home-based internet business, which has begun to take up all my spare time. A few days ago I realized that I haven't turned on a scanner in several weeks! Not one! If (when) this business takes off, I'll have plenty of time to play radio, but for now I guess my gear is going to collect some dust.

I thought long and hard about itï¿½this column is kind of my "baby," and it is difficult to let one's children leave the nest. Back in '94/95, I wrote the Kansas Column for the now defunct RCMA Scanner Journal. During that time I made friends with a number of you that were regular contributors. When RCMA folded, it seemed unfair to just quit. In an attempt to keep it going, I wrote the next column anyway, and sent it via e-mail to about 8-10 of the folks that had e-mail. Scan-L looked like an obvious place to post it as well. I had no idea what would happen.

That exposure caused the column's audience to grow to around 100 direct e-mail subscribers, with an unknown number of readers getting it through Scan-L and the news group rec.radio.scanner. A handful of other people started state columns similar to ours, but each one of them died off. As far as I know, the KS/MO column is the only one that is still around, which is something we should all be proud of. This one would have succumbed as well, were it not for the diligent contributorsï¿½you folksï¿½sending stuff in each month. When I hear someone say, "Andy, you do a great column," I always reply by noting that the information comes from others, and I simply massage it into something that I hope is easily read. Its success is directly and completely due to the input from readers. I "tip my hat" to all of you.

Soï¿½we need a volunteer. Getting the column ready doesn't take a tremendous amount of time. As the month passes, I get a bunch of e-mails and snail-mails. Those get cut and pasted into a Word document in raw form. When I get a few spare moments I go to that document and begin editing and re-arranging. More info comes inï¿½I add the raw info to the columnï¿½I edit some more. The last day of the month I panic and attack the thing with great vigor. Once it looks presentable, away it goes.

It has also been a vehicle for me to try to write goofy stories. Those

of you that have been reading it for a while probably realize that by now. Some of the stories weren't always scanning related, and some weren't very funnyï¿½but I was writing it, so I put in it what I wanted. The way I figured it was that if someone didn't like my silly ramblings, I'd refund their money.
Any takers out there? It would be a good chance for some frustrated writer to try it out. Since the position is voluntary and there aren't any guidelines, you would be able to be as creative as you want. Nothing says you have to do it the same way I have been doing. People will let you know if they don't like your approach! I'll give the mailing list and as much help as I can to the suckerï¿½I mean the "volunteer" that steps forward. (Seeï¿½another attempt at humor!) Let me know and I'll help you get started.

So, with that out of the way, let's get on to business.

1. KHP Troop B and centralized dispatch
2. Mo Water Patrol hint
3. Mike's planï¿½sounds like a good idea to me.
4. Rampart Search and Rescue freqs for KS/MO/CO
5. Civil Air Patrol and related info

---

1. Jim wrote in with this latest info from his area. "I went to work the other night and heard strange voices on Topeka's KHP dispatch. Apparently Salina has taken over dispatch duties for troop B on midnights. I think it went into effect on 9-1-99. So far I haven't talked to any of the troops to see what they think. There's not lots of activity on midnights anyway as the last troop out is usually home by 0200 at the latest, and there's only one out depending on his schedule. One downside is the loss of one more "cooping" spot." Thanks, Jim.

---

2. Blake says that his experience indicates that the best way to listen to the Missouri Water Patrol is to monitor the local SO/PD. Apparently they communicate with the local law enforcement agencies as a routine procedure. It makes senseï¿½the Water Patrol probably does not have any full time dispatch capabilities, anyway. Good tip, Blake.

---

3. Now here is a man that has done some thinking. I like his approach to scanning. Read his e-mail and see if you agree with me.
"I have made my ID list by comparing 5 different lists on the internet and by first hand monitoring. I use a BC 235XLT and a BC 245XLT {new} to monitor Wichita. I sold one of my two BC235's when I got the BC245, good thing they look alike because my wife thought we were getting new carpet next. I also use the WinScan software on my PC with the BC245XLT. WinScan is from Pozilla Software. This scanner with this software and a PC are a great combination. I set the 245 to log and record 5 to10 id's each day while I am at work or asleep at night. Later I check them out to see if I can determine what they are."

"The 235 is for regular monitoring, the 245 is for my detective work. I have banks 7& 8 set up for trunk tracking. I do all my searching on bank 8 and as I learn what an ID is I lock it out. In bank 9 I have entered the Wichita frequencies but not in trunk. This way when they go to privet numbers I can scan bank 9 real fast and listen in, the rest of the time bank 9 is off. When I started searching with WinScan I started to get large ID numbers I haven't seen before like 15920, 32576, 40342, 13712, 11472, 60144. Are these their private numbers? If I enter them in I don't seem to get anything. Anyone have any ideas?"

---

4. A fellow called D.W. is in charge of an outfit called Rampart Search and Rescue. The web site was mentioned in last month's column. He sent this extensive list of freqs for the area. Here is the text of his message.
"We have a nationwide low band license of WPMB 790 and we currently have two licenses pending with the FCC at this time. (Business and Public Safety.) Here are the frequencies:"

Business License (Pending with the FCC)

Colorado Operations:
160.020 Repeater FB2c
150.905 Input to 160.020

Kansas City Operations:
160.050 Repeater FB2
150.950 Input to 160.050

44.00 Interagency Mutual Aid
158.400 MO-I Interagency Mutual Aid
451.800 FB2-T Interagency - Simplex - portable disaster com
458.800 input to 451.800 (YES is not 5 megs but less disruptive to local traffic)

PUBLIC SAFETY FREQUENCIES

Colorado Operations:
155.175 Simplex
155.160 Simplex - Mutual Aid

Kansas City Operations:
155.235 Simplex
155.160 Simplex - Mutual Aid

National Operations:
33.04 Repeater FB2c - Colorado Operations (But license as Nationwide)
37.94 in put to 33.04 in Colo - Simplex (Nationwide Operations)
KC is using the 37.94 for simplex operations currently

"All above frequencies use 662 DCS as Rampart's main tone or code. However as to use frequencies better we use 606 of the input frequency to repeaters as a simplex frequency and use 606 as its tone or code.

However in Colorado the codes very on special repeaters. The common ones are 606, 703, 662, 411."
"The Rescue group uses GMRS repeaters to communicate to the public and we are setting up a link from Denver to Colorado Springs using 462.675 (606) in COS to 462.700 (606) in DEN. This will give coverage from Cheyenne, WY to Raton, NM with only two repeaters. More info on this is found on our web site: www.rampart-sar.com"
"Johnson County as said that they will let us on MERS. We have not requested to be on the roll call as yet, but hope be on by next spring if not sooner. We want to get some training behind us first and close to be operational, we have a ways to go yet."
"As to Y2K we in Colorado have been placed on standby by Adams County in Denver from December 15th, 1999 till January 31st, 2000. DIA is in Denver County but DEN does not have a SAR unit and Adams county is on both the Approach and Departure, therefore is anything happens at the new DIA airport. We would be one the first ones called out."
Great stuff! D.W. said he can be reached at the following addresses/numbers for questions.

dwhaskin@juno.com FAX 719-550-0540
Monitoring - "National Emg. & Travelers" frequency 462.675MHz on 141.3 CTCSS
www.rampart-sar.com Voice No. 800-583-4233
Member of: SBE, UFWDA, NASAR and APCO International

CIVIL AIR PATROL:
Civil Air Patrol actually conducts most of the search for missing aircraft missions in the United States. Their band plan includes the following

148.15 Repeater (may also be used simplex by aircraft)
148.125 Repeater (may also be used simplex by aircraft)
148.1375 Simplex for use by ground search teams
149.5375 Simplex air to ground primary
123.10 Unicom Search & Rescue-primary
122.9 Unicom Search & Rescue-seondary
(Note: Colburn's Aeronautical Freq Directory also lists other 121.XX, 122.XXX freqs licensed to individual states)

CAP also utilizes HF stations in the 4 MHz area (USB) however the emphasis is to use short range VHF simplex/repeaters rather than HF. Also Civil Air Patrol as an agreement with the US Coast Guard Auxiliary which allows them & Civil Air Patrol to utilize each agencies' frequencies.

CAP also uses POTS (plain old telephone system) with ground teams having prepaid telephone cards to call back to mission operations (e.g. low powered simplex operation in an area with one unit close to a phone booth).

(As a side note during the recent JFK search mission, a press statement from CAP (Worcester (MA) Sunday Telegram, 7/18/99) mentioned that CAP aircraft search 25 square mile area grids & kept in contact with an AF C130 aircraft)

US COAST GUARD:
Of course the Coast Guard handles search/rescue in the ocean areas as well as the Great Lakes. Depending upon the location of the search mission HF, VHF, and/or UHF frequencies would be used:

HF Primary:
5693 USB Utilized by Air Stations on direct aircraft/helo guard, predominately Great Lakes area
5696/8983 USB Used by the Master Communication Stations (Atlantic & Pacific) for maintaining aircraft/helo guard & also phone patches to Group/District Rescue Coordination Centers which give the search taskings to air assets.

There's also other HF freqs that are used in the 2, 4, 6, 8, 10, 12, 16 MHz bands, some of which are encrypted.

UHF
381.7 Air Stations Operations
381.8 Air Stations Operations
282.8 "On Scene" Operations

VHF:
156-162 MHz, basically many of the marine channels are also available in the aircraft/helos along with frequencies/channels designated as LANT## which may vary by CG Group/District & not much as been posted nationwide about this.

I might add that a few years ago I spoke with the crew of a HU25A that had been involved with the TWA crash; basically "guard" Comms can be directly with an air station (Otis gets about 150 miles on UHF, but this varies depending upon altitude & weather conditions), CAMSLANT/PAC, other group/district station, or ship in the area.

OTHER MILITARY/FEDERAL AGENCIES:

Where available AF/AFR/Guard Air Rescue Units (e.g. 106 RQG, LI NY), command post frequency (287.5), and other possible ops: 251.9, 381.8, 282.8.

Army Guard/Reserve Helicopter Units --- Common frequency 242.4 but many (like MA) use low band NFM freqs also e.g. 38.70 (MA), 41.90 (CT), 40.10 (NY), 41.20 (VT), etc. (See Coburn's Aeronautical Frequency Directory 3rd edition for a complete list).

Active Duty/Reserve/Guard Air Force, Army, Navy, Marine ground search units
--- From time to time a contingent may be used for ground searches, my guess would be that whatever comm gear the units normally use would be deployed with them).

Active/Reserve Navy --- utilized from time to time, probably would use Coast Guard "discrete" frequencies in HF, VHF, & UHF bands.

National Park/Forests --- get the local frequency lists for your area

OTHER GOVERNMENT AGENICES:
Well at the state level one could have the state police, dept of natural resources, parks department, aeronautical department, etc. County/Local police, fire, emergency management, medical etc. ------- there may be mutual aid frequencies that they all can use or again individual frequencies by agencies.

OTHER VOLUNTEER ORGANIZATIONS/INDIVIDUALS:
I guess you could add in CB, HAM, GMRS, Family Radio, etc. along with various trained search teams (e.g. Springfield College, Springfield MA actual has a program in search/rescue, dispatching, emergency management, etc. -- & they utilize VHF highband simplex portables).

LOCAL/REGIONAL AIR TRAFFIC CONTROL FACILITIES:
Almost forgot, these are also important because it may enable you to pickup the callsigns of the aircraft/helos being utilized in the search & better able to monitor where they are at.

In conclusion it is always challenging & interesting to monitor this type of activity. Success can be achieved by developing your own local checklist of frequencies. Furthermore, I would encourage anyone interest in search/rescue to contact their local Civil Air Patrol unit for further information or perhaps another organization that is involved with this in your local area --- I'm sure volunteers are always needed in a variety of capacities!
That info came from Ken. Thank, Ken.

---
6. Dale noted that Troops A and H should have their GPS system on line by mid August, and that 3 repeaters have been installed for the new 800 system at Rush Center.

Well, folksï¿½that's it. I truly hope you have enjoyed the column the last 4 years. You all made it the success we know today. Who ever takes over deserves your continued support. Until that someone steps forward, send your stuff to me and I'll archive it.

It's been a hoot! I'm 10-7.

Andy the Barber

That is a (p)rivate (l)ine; sort of like CTCSS or DSC.
It is used to prevent interference from other radio services like pagers
which can interfere on almost any band 'casue they are so powerful
especially in metro areas.

Well that is great but I thought that the FCC controls what the general
public listens to while the NTIA controls all, shall we say FEDERAL
frequencies. Even thoug that may be the FCC and the NTIA have to
coordinate with one another.

Yep. You're exempt. I would suggest you carry with you at all times both a
copy of your ham license AND the state statute which exempts licensed amateurs.

This is great! I wish they had this law in Wisconsin.
I have been behind a lot of cell phone users on the freeway, who insist on driving in the left lane, when there are 3 lanes. Their speed will constantly vary up and down within about a 20mph band. They are unaware of anyone else around them, and will have a line of cars a half mile long behind them. Sometimes they will go down to 10 or 15 mph below the speed limit. This happens during rush hours, when everyone else is going 60-75 mph.

Phil,

I have read of studies that show cell phone use while driving, to be as
bad as driving while intoxicated. I have read of accidents and death
caused by a person driving while talking on a cell phone.

Harmless?

Chuckle. I realize what PL is, it is a trademark of Motorola, and
rather than being "sort of like CTCSS", it is the same thing as
CTCSS.

It is also used to allow mutliple users on the same frequency.

But, my question, is where in the world did you get a designator
for PL of 17? PL is normally designated with two characters,
one alpha, and one numeric. 1Z would be an example.

CTCSS is normally done in the actual frequency, such as 151.4

The Pro-94 may be available as soon as September 15th. We will probably have to wait longer for the Pro-92 to be available, but it should be around before Christmas. Most of the radio scanners will be available from the RadioShack.com website which has begun taking orders online for those who don't like dealing with the RadioShack employees. I'll update the http://members.aol.com/RadioShackPro92 website and let those on the Pro-92 mailing list know when the Pro-92 is available. I believe that Scanners Unlimited will take preorders for these new radios if you are interested in being one of the first to own one.

I live in the Washington, DC area and am trying to get back into scanning. I'm mostly interested in police and fire transmissions.

It seems that most of the jurisdictions are installing digital trunk systems. From what I can see, there are no digital trunk scanners on the market. Am I essentially out of luck?

Any help would be appreciated.

Thanks,
Pete Cerquone

Ham radio stores are only interested in final sales. They are not like Sears or Walmart. Once you make a purchase, you are on your own - even for most service problems.

The manufacturers do little to encourage anything other than the above - and also offer inferior service - as compared to most consumer product providers.

You ask why? Very simple, amateur radio is a niche market. We are fortunate to have the offerings we have - believe me it could be worse. And, it will get worse as more XYZ type chains take over and the small shops all fold.

Yes, there are a few small ham radio stores left, but they have a hard time competing with the no tax 800 toll free numbers.

I swallowed hard the last time I bought a new rig. But, I bought it locally and paid the 8% sales tax. The price was the same as the "big discounters" advertisements. But I did have to pay the tax.

If a few more dollars were kept nearer home, there would be more customer service. There is nothing like a small ham radio store on a Saturday morning. Where the owner knows the local hams and the tech is an active local ham.

I used to be the tech in one of these little stores. Greatest part time job (could you really call it a job?) I ever had.

But the situation could be worse. Don't believe me? Try owning an airplane and you will soon see what being at the whim of the dealer, service shop, and manufacturer really means.

>Bob

Since the "Cordless 900" telephone band covers about 26 _mHz_
(902.0125-929 mHz approx.) a scanner stepping of 12.5 kHz _or_ 30 kHz is
going to be a lot of channels (no, I don't want to do the math,
thanks!).

If, as pointed out by alhaz@xmission.com (Eric Jorgensen), you don't
mind violating the law, and if the additional roadblocks of digital and
digital spread spectrum models operating in that band (& don't forget
the new 2.4 gHz models, some of which use 902-929 mHz for handset to
base; see Sept. issue of "Popular Mechanics"© magazine), it would
probably be a little easier (no more productive though) to search, say,
5 mHz of that band at a time.

Man, did Bill hit that one on the head!

Try being stuck in Idaho after your alternator on your 1962 Piper Cherokee
fails.
$500+ for a new one and $250 to rebuild the bad one. The $250 didn't
include removal and re-installation after the rebuild. Talk about having
you by the shorts hairs...

I tried so hard to be loyal to our local shop because I like to support
folks I know, but after I got treated so bad at the local place I gave up
and started dialing the 800#.

You folks that have two or three shops in your area are darned lucky.
I like being able to buy a piece if gear and take it home same day.
Mailorder sucks.

I have been trying to connect to the Houston PD Scanner for several days now, and keep getting the msg cannot locate. I'm trying to get there from "Martins Home Page" http://www.gebhart-sbg.at/scanner/liveaudio.html.

Can anyone advise what the problem is?
Thanks

But my point remains. There is nothing to "change" in these radios.

Hi all,

Online radioscanner to be heard at http://surf.to/gemert

Most of the traffic is in Dutch as well as the homepage, but also many
frequencies of civil and military aircraft frequencies are online,
check it out if you are willing to!

Many greetings, and good luck with your hobby !

Marcel.

Could anybody please recommend some "decent" software for the BC895.
I am trying to use "Radio Mgr", but it seems somewhat confusing at
times. "Save" this "open" that and too many databases to keep track
of. The manual is also confusing and long. I tried to run "WinScan"
and it keeps trying to to hook up with the BC245, timing out, so I
just gave up on it. Has any body used the "Scanner Master" software?

I just want something to create and manage frequency databases,
monitor "Hits" and be able to change and upload/download things when I
want.

Please post to the newsgroup.
Thanks, Nuf Time

Jon,

The sample WAV file that is included with wintone is designed
to allow you to tune your system to correctly decode tones,
wether they be from a file or real-time. So what this is
indicating is that the system is not tuned to the levels which
good decoding is available.

Unfortunately, Wintone 2.02 is not very tolernat to noise
factors, or differences in sound cards. The algorythm that
wintone uses is static, and requires a hefty signal to noise
ratio to detect the tones. What we have found over the time
the product has been out is that such an algorythm is not the
best solution for everyones environment. Different sound cards
deliver different sound characteristics that can easily sway
wintone from working properly. This is one reason we have been
working to get WintonePRO out as soon as we can.

It is very possible that Wintone may not be "tunable" in your
environment, and if this is the case - I am very sorry. We
are working to come up with a product that can be dynamic and
reliable in any situation.

To answer other questions - yes - there are a lot of folks who
wintone works great for, decodes good right out of the box.
This is the main reason we make it fully functional shareware,
so that you can be happy with the performance and operation of
the product before you purchase it.

WintonePRO is targeted again for mid-november, among other things,
our most recent beta showed that at least 80% of the problems
we were having were due to database issues, so we have opted to
change our architecture and implement a different database engine,
one which is smaller, faster, and more reliable than our current
one. However, this takes a bit of time. We are most interested in
making sure that whatever we release will be fast, solid, and
reliable. So I urge you to try out WintonePRO when it becomes
available - I hope this will better suit your needs!

Well I don't have any problems with the buttons other than they are too small for those times when you just need to grab them quickly and raise the volume. Sorry no clue about RS and wether or not they have any other buttons. I'm sure some kind of electronic surplus store might have some buttons that will fit.

3385. Clemson Area Transit

Newsgroup: rec.radio.scanner
Date: 1999-09-06 00:00:00 UTC
From: sdddr@yahoo.com
Message-ID: <37d3143c.8345880@news1.uncensored-news.com>
Source record: 107942

Group,
Just wondering if anyone knows or can help me find the frequency
for the Clemson Area Transit (CAT) busses.

Also,
Question: I have a scanner that picks up air frequencies and
listen to it regularly. On frequency 135.35 I pick up aircaft going in
and out of the Atlanta area. My question is: why am I able to also
pick up the controlers talking back to the aircaft when I live @ 150
miles from the atlanta airport. I can see picking up the planes
because they are in the air but not the controlers.

Thanks for any response.
Waldo

New to this scanning stuff. Someone was good enough to direct me to the PerConCorp webpage for finding frequencies. It's GREAT!

Question. The listings show a 2 letter abbreviation for "RS" (assume Radio Service). Looked all over the their site but couldn't find what the abbreviations stood for. Can anyone point me in the right direction.

Thanks,
Jim Ek

This often occurs when the memory battery dies. Change the 9 volt battery
then do a complete system reset (essentially a brain wipe) by pressing and
holding the reset button on the rear panel, then pressing the clear button
on the front panel.

If this does not work, start saving your pennies for a new radio, as the
repair records on these radios is not real good. G&G in New York State is
good, as long as you are patient.

Unfortunately "decent" software for the 895 simply does not exist.
Radio Manager is probably the best in a sorry lot...and I agree that it
is confusing, overly complicated for simple tasks.

Air Route Traffic Control Centers have remote radio transmitters since
they cover areas larger than they can broadcast to from their cities of
origin. For example, Jacksonville Center covers the Columbia, SC area for
altitudes over 10,000 feet just as Atlanta Center covers the northwestern
part of SC. They also have remote radar sites for the same purpose.

There is a fairly widespread problem with solder joints on the CPU board in 2004's made in 1987. Sometimes it can be fixed by reheating all the solder joints on the board. This is very tedious and is probably the reason G & G lists the 2004 on its short list of non-repairable units.

Hi, Jim, I certainly agree -- thanks PerCon!

To see a list of the codes: On the search selection page, pick something like "Radio Service in a City." The next frame will show you a drop-down menu for "Radio Service Code" with stuff like "AA -- AVIATION AUXUILIARY GROUP".

Good listening!

Great South Bay Amateur Radio Club Amateur Radio Classes

NOVICE / TECH CLASSES - 2 hours theory & 1/2 hr. code

The Great South Bay ARC has scheduled Novice/Tech classes beginning
on Wednesday September 8, 1999. Classes start at 7:30 PM and
will continue to 9:30 PM every Wednesday for approximately 14 weeks.

All students are required to have the new version (Red Cover) of the
publication "Now Your Talking..." which is available at a local
Radio Shack or from the ARRL, 225 Main St., Newington CT 06111.

ADDITIONAL INFORMATION

All classes are located in the basement of Babylon Town Hall,
200 E. Sunrise HWY, Lindenhurst NY in the Emergency Operations Center
(ARES/RACES Room), access is gained via the door at the bottom of the
stairs at the rear of Town Hall.

If you are interested in attending a class or you know someone who is,
have them contact Phil Lewis N2MUN (516)226-0698 for further information
or just come on down to class. The class instructor is Walter KA2RGI.

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5)
PL required. You may also write to:

Charlie - you can try:

<www.911scanner.8m.com>

or the Scanner WebRing should have the info:

<www.webring.org/cgi-bin/webring?ring=radioscanner;index;id=1>

This WebRing has many, many sites all devoted to scanning,
from many locations - you should be able to find all sorts
of stuff here. It's a group of websites that are linked so that
you can jump from one to the next to the next.

Have fun.....

Almost all Pro scanners work the same way, so even though I don't have a 2020, it probably works just like my 2021. Say you want to program 3 frequencies into memory locations 16, 17 and 18. Use the following keystroke pattern:

<manual>,1,6,<manual>
<program>
1,2,3,.,4,<enter>
1,5,6,.,9,7,5,<enter>
5,6,7,.,8,<enter>
<manual>
<scan>

Good listening!

What a queer frequency distribution - to include wide fm support but
then specificly cut out the commercial fm band.

Sounds like you are running the CPU off the battery full time. That
would happen if Q33 failed. Do you have a voltmeter?

I'm trying out Scan Star now and it seems to be organized pretty well and offers mostly what I want in a bunch of different programs. At least the data manager program worked and uploaded my radio settings to my computer successfully. I could never get RadioManager to do that. I have no idea how much the non-demo version is, they have hidden the price from me so far, it must be high. I tried RadioManager and didn't like it. Most of them Ive tried so far have been overly complicated to just start up and run at least to my simple mind :)

I'm still looking for something better also though, so I wish us good luck.

THAT is surely a "customer-oriented" attitude! Please reply with your
firm's URL. NOT as a blatant commercial advertisement, of course <g>.
Just for me to place in my Rolodex[tm] for future reference.

> We resell these units as 'Class B' inventory and
> usually make back at least the 'cost' of these units.

I am not a retailer, but I do know that in the cut-throat amateur radio
industry, even the "big stores" are making very little on the popular
HTs. VERY little. That gives them no "room" to create a "Class B"
category.

And you and I would scream bloody murder if we purchased a "previously
opened" item that we thought was gonna be new...<grin>

> Perhaps I'm just used to 'excellent' policies in comparison to 'no
> policies'.

Firms with "no" policies don't get much respect anymore. You'll find
some independent dealers with liberal policies...but I cannot equate,
necessarily, rock-bottom pricing with super-liberal return policies.

So...where's the "middle?" I do not know.

I have purchased HTs and mobiles of several brands from HRO. And tons of
"higher-mark-up" accessories (my wife will attest to all this...). The
folks at HRO-Anaheim have ALWAYS been fair and honest with me, and with
those I send there.

But I haven't been in the position of purchasing a "bigger-dollar"
item...using it a few days...and then desiring to take it back simply
because I didn't like it. Between obtaining info from other users,
reading reviews in print and online, I guess I have been "lucky."

> ...all the research on the world is not going to match up
> to holding one in your hand - bottom line.

Touche - you are correct!

Maybe my experiences with (a) a close-by excellent dealer and (b) several manufacturers' offices all within an hour's drive have "clouded" what others feel.

> We reduce the price to acquire our capital back.

Remember Mad Man Muntz? "We lose money on every sale - but we make it up in VOLUME!" (An old Southern Californian reference...sorry - probably showing my age...)

Thank you, Keith, for the dialog...let's see what others think!

CHANNEL # FREQUENCY

ONE 162.5500
TWO 162.4000
THREE 162.4750
FOUR 162.4250
FIVE 162.4500
SIX 162.5000
SEVEN 162.5250

In some cases; some advertisements for weather radios claim that there are ten frequencies. Does anybbody have the other three that are missing from this list

I have been playing with my scanner recently trying to find frequencies, and have thought about putting together a nice Visual Basic Front End for an Access Database file. What I was thinking was, lets say you are searching and come on a frequency. You put in the frequency into the program, and it calls up that frequency's associated fields. Each record should have associated with it comments or what one heard, that are automatically date/timestamped. That way, when I hear something, I can put it in the log and have it date/time indexed. Once I hear enough, I could put in a guess as to who owns the frequency, along with some kind of flag indicating how sure I am. Definite, perhaps, notsure etc.

Just some ideas. Could be implimented with two tables. Easily in VB.

Lemmie know what you think. :)

This has been known for a while. I reported details of it in August
of '98. They decided to abandon the scanner market and concentrate
on land mobile radios.

No recall. FCC simply revoked certification of the R10. Or, in other words, they wouldn't let any more in the country. So any in the factory or on a boat to the US had to be sent back to be "fixed". Once they did "fix" the "problem", Icom had to get new certification.

This all went down in Aug 98 as I reported on my News Flash page on Aug 7. So yes, it's possible that one could find an "old" R10 model stuck back on the shelf someplace, but I think that since a year has passed it is highly unlikely. I'm sure 99/9% of the old have been sold and replaced by the latest and greatest model.

This same fate befell the IC-T8, IC-PCR1000, and IC-R8500.

I have the 160.830 frequency, but I hear them talking about switching up to the 800MHz. New Jersey State Police has and 800MHz trunked system, but I can't see NJT Police having an 800MHz trunked system for 5 or 6 cars and some foot officers.

I believe the channel they are referring to is one channel only.

Given the (albeit weak) presence of IF frequencies emitted by scanners, they definately have a case for banning them.

The other argument that's pretty obvious is to prevent chaos in the event of an unforseen difficulty. When a flight attendant freaks out at learning something to the effect of, oh, say, one of four engines having problems, they get in really deep trouble. It's a big part of their job to keep a smile on their face even if they know there's a 50/50 chance none of you will survive.

Granted that, if you've got a scanner and you're listening in on the pilot's conversation with the controll tower, if *you* were to freak out after hearing something that sounded disturbing, all hell could break loose, and you would most definately be arrested and charged by the FAA.

And when the *feds* lock you up, they lock you up and throw away the *room*.

Given that, even if scanners didn't emit a carrier on a frequency a calculated number of khz below the frequency you're recieving, even if you knew you could sneak one onboard and use it unseen, do you honestly think it'd be a good idea to use it? I mean, sure, we're all big men (and women) down here, but can you guarantee that 30,000 feet over the atlantic, you won't get a bit out of sorts while overhearing your pilot discuss various possible attempts at landing without full flap functionality?

Is causing a riot on a commercial airliner an effective way to survive
that?

The flight crew is doing everything they can. If you're gonna survive,
you're gonna survive. If you're not, you don't need to know until it's
actually too late.

Otherwise, people could get hurt, people could die, people could do
stupid things, the pilot and his crew could get distracted from tasks
that might have saved your butt, and all because you just *Had* to
listen in.

This radio is jumper configured. if you're afraid you might
accidentally listen to cellular communications, and the jumper is
already broken, get a little dab of solder and reconnect it.

Personally i wonder about the post-law version of this radio - I mean,
I worry about just how they "fixed" it. maybe they just moved the jumper
to a trace between layers of the circuit board so you can't find it, in
which case you could probably use a precision drill to make the same
change, if you could get one pre and one post together and figure out
which other two points it was between.

Or maybe there was some hard and fast reworking of the way the cpu
works. In that case, i wonder about how it effected the functionality of
the radio.

Regardless, it is not illegal for individuals to sell pre-ban,
modifiable radios, it's just illegal for businesses to sell them. one of
the added bonuses of a pre-ban radio, regardless of whether or not
you're interested in cellular convos, is that it will probably retain
more of it's resale value for the next couple years at least.

RadioShack still sells these crystals. You have to go to a store and ask to look at the RSU (RadioShack Unlimited) books. There are 5 or 6 colored binders that are catagorized. The Communications binder has a list of all the crystals RadioShack can order. They place the order and you pay for the crystals. Within a week they will be delivered to your home by mail or possibly UPS. I think most of the Crystals sell for $5.95. If you shop around you will find that this is a reasonable price.

I'll have to check out the unit numbering and dispatch centers, but on the North Coast, State Parks (Redwoods) uses 151.01R with 158.97input (not yet licensed, but in use at least a year).

Repeaters are located on Cahto Peak, Pratt Mtn, Mt Pierce, Requa, Point St George, and Jedediah Smith State Park.

Well i tried putting the DTMF-Sample.wav into some sampler software and used a bandpass filter which only let 500hz to 2000hz through. Then i saved the resulting sample and played it into Wintone. It did make a difference to the decoding although i wouldn't say better. The sample didn't really sound too much different from the original.

I also tried 750hz to 1500hz this did make it sound more different and some tones looked quieter in the sample edit window although didn't seem to sound quieter. Wintone still wasn't really any better at decoding but the decoding was different.

Perhaps with some time spent on this perhaps i could find the right range although i feel while some tones are improved i loose out with others. With 750hz to 1500hz such a narrow range it wasn't really surprising that some tones would be quieter while enhancing the others.

BTW about the soundcard thing. I do happen to use an AWE sound which i think would be quiet a popular brand of soundcard. Or is it that there are differences between different AWE soundcards? [as i mentioned before mine an AWE64value]

The only 2 freqs I have are 160.830, PL 123.0Hz, and 160.215 which is
the vehicle repeater. I don't have any 800 freqs listed exclusively
for the NJTP, however there is an 800MHz trunked plan for NJT. If I
get more I'll post it, Bob.

police department or police force or an official with written
authorization from the head of a department which regularly maintains
a police radio system authorized or licensed by the Federal
Communications Commission, to have in his or her possession, or in an
automobile or other vehicle, or to equip or install in or on any
automobile or other vehicle, any mobile radio set or apparatus capable
of either receiving or transmitting radio or other messages or signals
within the wavelength or channel now or which may hereafter be
allocated by the Federal Communications Commission, or its successor,
for the purpose of police radios, or which may in any way intercept or
interfere with the transmission of radio messages by any police or
other peace officers and it shall be unlawful for any car, automobile,
or other vehicle other than one publicly owned and entitled to an
official license plate issued by the state issuing a license to a said
car, to have, or be equipped with such sets or apparatus even though
said car is owned by an officer.

<snip>

I find the phrase "automobile or other vehicle" to be rather
frightening. It is ok to have a hand held scanner, it seems. But put
yourself on a bicycle and you are now on a vehicle and you have just
broken the law.

It also doesn't seem to exclude aircraft, though I might be able to
argue that an airplane in flight isn't under the jurisdiction of the
state of Kentucky. I guess I'd have to turn off the scanner while
taxiing, though.

I've dealt with John before. Since my post I've found there's also
Newport Electronics on Route 18 in East Brunswick. He's got the Relm
MS200 base/mobile scanner, btw. Then there's also Clark Stereo in
Clark(135 off GSP). He's got scanners and can order whatever he
doesn't have @ the time.

Well, like with laptops, being electronic equipment, you may have to register it with the pilot and first find out if its okay to use it while in flight - and that it doesn't caused interference to the aircraft's electronics, too. 8-(

This is true. But you left out the fact that many of the
digital phones (when they're not roaming onto to analog
if its a dual-mode) put out much less power. And the
output power of the cell phone is automatically lowered
by the cell site as you get closer to the tower. Its is for
CDMA anyway.

But it's not illegal for the phone company to provide the police with a
listing of cell tower activity at what time and what numbers connected
"without" monitoring ANY cell communications. This might require a court
order since the only thing of interest would be what activity took place
between the hours of say midnight and 0600 between what phone numbers and if
over a period of time there was no handoff indicating a stationary cellphone
(unless of course there was enough local traffic to cause a channel switch)
which would then be a lead to cross check the registered phone owner agains
the vehicle registration and look for that particular vehicle in the area,
maybe even a traffic stop if there is a tail light out....(;>).......really
touchy area here.....

Yes, enforce lane disipline. The people in Wisconsin never heard of it.
They will drive in the left lane forever. They don't care if they have 5
miles of cars behind them wanting to pass. When you finally get passed
them they look at you like "what is your problem?" or whip you the finger,
or get mad and tailgate you. You don't dare pass them because they think
they are going fast enough, or taking it upon themselves to enforce the
speed limit, by makeing sure no one passes them. One guy I work with said
"if I am in the left lane going faster than the cars in the right lane, I
am damn sure not going to move over to let someone pass me, I am going
fast enough." That pretty much the mentality here.

The people with cell phones are even worse. They don't even see you.

Tom

I don't think they teach people to keep right except to pass, in Wi.

How do you know the studies didn't?

Are drunks just driving drunk, and not causing fatal accidents?

A couple of years ago, in this area, there was a contractor driving and talking on a cell phone, with blue prints spread out on the front seat of his truck. He hit a womans car, and killed her. Eye witneses saw him do this.

This is but one case.

Oh, well, there you have it. Why don't we just close down the universities, the research institutes, toss a thousand years of progress out the window and just go to the ultimate source of all wisdom, the cop on the beat. Nothing against police officers, but most people who've actually completed 8th grade general science prefer a slightly higher standard of proof to establish scientific fact. Maybe you haven't noticed, but there's a reason we require a trial even after the police have chosen who to arrest in order to determine guilt.

> You
> can say it anyway you want but it dosen't change the fact that idiots on

Speculation does not equal fact. Again, I can speculate that people whose names start with J and who don't understand the scientific method are a hazard on the road, but that doesn't make it so, and I doubt you'll tear up your license on the basis of my assertion. How about some proof?

If you are replacing your cpu chip, I strongly suggest cutting the pins off the old chip before doing any unsoldering. Attempting to save the old chip by unsoldering it with all pins intact will probably result in a damaged pc board. (Don't ask me how I know this).

In PA they HAVE given tickets for 'Illegal use of lane' for people who do not 'Keep right' on I-80. A friend of mine got one! He deserved it, and I laughed my butt off at him and his stupid arrogance! Served him right. (OK, he really wasn't a good friend!)

But slightly at a tangent. Watch the show I think last thursday on 'road
rage' on NBC? They had this ASSHOLE purposely sit in the left hand lane on an LA freeway, and the IDIOT had the guts to state on the camera to berate a truck that came up and followed two close. The whole time they were INTENTIONALLY blocking the far left lane with their Lincoln without passing, and pacing their camera car in the center lane without passing.

I would have loved to see those idiots get a ticket for illegal use of lane.

What? It's a violation? DUH!!

Mike

Source record: 107719

Since the original came from NY, I thought I'd mention that NYS was harassing HAMs for a while over just their radios with extended capabilities.

This caused a number of complaints and at lest a few court cases.

Last I heard the current situation is that if they find you with a scanner,
and it has police frequencies programmed into it, then they can cite you.

Someone may have more up to date info on this.

>Is there a mod to change the frequency if indeed it does look for a tone of
>some sort?

All data skip does is detect a continuous pattern. You'll notice some data frequencies are skipped (like trunked data channels) while others, like pager data, are not. What's more, some CTCSS tones can trick the data skip into thinking you're listening to data and resume scanning or searching on the receiver in the middle of a conversation (which is darned annoying sometimes). I rarely use it myself... It's not really reliable. If they combined it with an auto lockout feature and improved the algorithm (to prevent the CTCSS tome skip), then they might have something there.

911RADIOCOMMUNICATIONS wrote:
>
> Could someone please explain how an L.T.R. trunked system works?
> Also why are they reffered to as Johnson/Uniden at times?

LTR = Logic Trunked Radio. As I understand it, originally invented by
EF Johnson and they had a licensing agreement or something that allowed
Uniden and others to manufacture LTR compatible equipment.

LTR is different from Motorola and EDACS systems in that there is no
control channel. all data is sent by low level subaudible 300 baud
data stream (similar to digital code squelch or CDCSS) and all channels
can carry voice traffic and the data stream at the same time.
the system uses a number of repeaters (usually
multiples of 5) each repeater has a LTR controller on it.
The controllers are connected to eachother on a data bus. if one
repeater or controller fails the others are not affected.

the mobile radios are programmed with freqs for each repeater and
whatever talk groups are used. each fleet or talk group has one
repeater designated as its home repeater. the radios listen on the home
repeater when they are idle and will transmit on it if its not already
in use.

when somebody transmits, the data stream assigns that talk group to
use the current repeater and at the same time, everybody else is sent
to an unused repeater or back to their home repeater

When a repeater is not being used, it makes a short data burst
every few seconds to let the mobiles know it is still there.
If I got this wrong I'm sure somebody will correct it.

Since this seems to be the place for online debate, be it scanner related or not, I propose the following subject: What's the difference between an Ambulance Chaser, and a casual observer with a scanner? Is there one?

I've heard alot of bad things said about "Ambulance Chasers" but who's to say the guy who stands there gawking at the scene isn't a reporter of some kind? And even if he's not, provided that said call chaser stays out of the way, is there really any harm done? What makes him any better or worse than the rest of the looky loo's who gather to watch? Does having a scanner at a scene make you a loser with no life? How is sitting at home and listening any different?

So, in your own words, what is an Ambulance Chaser to you?

An ambulance chaser is someone who monitors events, and then offers
a service at the scene. The difference between a scanner listener and an
ambulance chaser is that the chaser tries to make a profit by responding to
the event. Examples can include tow truck drivers, lawyers and many more
that readers of this newsgroup will mention. Sometimes chasers can be
legitimate, such as your local news reporters monitoring the police
frequencies to catch a story.

license.

I think the main reason for the exemption is simply because most ham equipment allows receive only on other bands and can scan, like a scanner. So a licensed HAM, driving around with his HT, would be in violation of the law because it can receive police transmissions, were it not for the exemption.

The whole idea is of course, ridiculous. Had they simply written the law to state that no one may own a radio capable of *transmitting* on police frequencies except the police and it's authorized members then none of these ridiculous long winded laws would be necessary.

But that's just my opinion.

Well, I love my R-2, as it is the perfect size for me, and exhibits better sensitivity in the 800MHZ band than my AR2700. But, this is one person's opinion. You have to weigh certain factors, like the fact there aren't any numeric keys and it wont trunk-track. i am lucky enough to live in an area (Cincinnati, Ohio) where the voters continually turn down a levy to upgrade the communication system. The one feature I love about the R2 is the CTCSS search and decode, a must if you live in a non-trunked, heavy traffic area. I notice your e-mail is Italy, so I am at a loss as far as vendors. Here in the States Lentini is selling them for $199.99 delivered, but it would be a US "neutered" version.

For the specs on the US model, try www.icomamerica.com and for the international version, try www.javiation.co.uk

If it is a legal purpose then you don't need a modified scanner, you
need a legally approved wiretap. If you're not able to get a court
ordered wiretap then you likewise do not have a legal right to "scan
for cellular calls". Additionally, you mentioned in another post that
you're scanning cordless calls. That is also illegal. Get a court
ordered wiretap, or cease and desist.... or at least don't ask us in
the newsgroup to be a party to your activities.

There is more to it than that. One scanner = $20 to $40 gross margin
dollars, one cell phone = $20 GMD plus $35 back-end commission, plus
salesperson "spiffs", etc. There is simply more money in selling a
cell phone, and since it's more of a mainstream item it becomes a
staple.

>the dumbest cop in Warren, PA.
>

Actually you are quite correct. There is no mention of "cellular" in Title 18
of "our" US CODE.....in fact what it does say is :

Sec. 2511. Interception and disclosure of wire, oral, or electronic
communications prohibited

(1) Except as otherwise specifically provided in this chapter any person who -

(a) intentionally intercepts, endeavors to intercept, or
procures any other person to intercept or endeavor to intercept,
any wire, oral, or electronic communication;
(b) intentionally uses, endeavors to use, or procures any other
person to use or endeavor to use any electronic, mechanical, or
other device to intercept any oral communication when -.............

ad-nausium.......

The key words to remember here is "ANY" and "COMMUNICATION"....this said one
must remember that the only thing that keeps bouncing off the screen in this
newsgroup is "cellphone" conversations when there is enough teeth in the law
to haul your ass in for telling stories about ANYthing else your scanner hears
with the following exceptions:

(g) It shall not be unlawful under this chapter or chapter 121 of this title
for any person -
(i) to intercept or access an electronic communication made
through an electronic communication system that is configured so
that such electronic communication is readily accessible to the
general public;
(ii) to intercept any radio communication which is transmitted
-
(I) by any station for the use of the general public, or that
relates to ships, aircraft, vehicles, or persons in distress;
(II) by any governmental, law enforcement, civil defense,

private land mobile, or public safety communications system,
including police and fire, readily accessible to the general
public;
(III) by a station operating on an authorized frequency
within the bands allocated to the amateur, citizens band, or
general mobile radio services; or
(IV) by any marine or aeronautical communications system;
(iii) to engage in any conduct which -
(I) is prohibited by section 633 of the Communications Act of
1934; or ....etc (you get the point).....

Now where does Indiana and Kentucky get off making their own laws that contradict the US CODE. Seems to me that the intent of the above was to allow ANY one to listen in to ANY government agency communication......food for thought......

Fred

Does any one know of any antenna that can crank up like some antennas on luxury cars, but for use as a base antenna for a scanner?? (for say rooftop, or side of house mount, or stand alone)
Basically what I am looking for is an antenna that I can raise when needed then lower when not in use. Any links would be great!! Also, as far as putting an antenna in a tree, does the antenna itself need to go past the top of the tree, or can it be under the top, concealed by branches and leaves??

I have one Icom IC-R100 Communications Receiver forsale. This is a Scanner plus a Shortwave Radio. Its in good condition and had been installed in the dash of a Toyota 4-Runner. Owned by non-smoker.

Wideband frequency coverage 0.5 - 1800 MHz continously with FM, AM and Wide FM modes.
Multiple scan functions including auto memory write scan.
24-hour clock system with muliple timer functions.
A variety of tuning steps corresponding to any operating band. 1k, 5k, 8k, 9k, 10k, 12.5k, 20k, 25k.
800 MHz band NOT Blocked.

Comes with: Mounting bracket, CP-11 (optional) 12volt cigarette lighter cable with noise filter plug, original operator manual.

Asking $600.00 or B.O.
Dan

Newsgroup: rec.radio.scanner
Date: 1999-09-07 00:00:00 UTC
From: rsmerker@steaksandwich.com
Message-ID: <7r2aalths1@nnrp1.deja.com>
Source record: 107770
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Jon,

Not likely, but it is worth a shot. When Wintone recieves the sound data from the system, it assumes that any valid tone will be a threshold above x, where x is a hard coded value. If the amplitude data comes in much higher or lower than what it was originally designed for, it throws the detection engine off, and starts throwing away valid tones. One thing that helps sometimes (Which was our original suggestion) was to adjust the volume on the WAV playback, in the hopes that it would skew the values we recieve from the Windows sound system. But in your case, it had no effect. We are aware of the limitations (Or in this case flaws) that the current engine has, and that has been worked around in WintonePRO.

If you do use an equalizer, increase the mid-high range - That would probably give the best results. And let me know if that gives you better results!

Rich Smerker

There is also a control-type channel at 235.250. They use it to discuss
weather, ops, last-minute arrangements etc. Thunderbird lead will call
for permission to begin the show on this freq, usually stating whether
it will be a high or low show. Maintenance have handhelds in the
413.000 to 413.400 range -- there are several channels, usually at
least two in use.

thank you for sharing. now if only someone would come up with a
solution to the "useless postings by sidney latham problem" i'd be all
set to make my way in the wonderful world of radio.

Try a spray called TUNER CLEANER - available at RS and probably
many other places. It's for cleaning behind volume knobs and such when
they get all scratchy/ noisy.

A study by the insurance institute for highway safety that culled data from accident reports indicated that cell phone usage had the same correlation with accident rates as a .10 or higher blood alcohol. Keep in mind though, that this is a CORRELATION - no causality has been established. The correlation held for hands free cell phones as well, but banning those would have enforcement problems. Psychologists involved in the study speculated that conversing with someone not actually present creates a greater distraction because the verbal activity is disjoint from the visual and other stimuli. However, no one has actually done a controlled test to establish causality like the numerous ones done with alcohol.

Then enforce lane dicipline. Drive right, pass left, or get a ticket.
If someone loiters in the passing lane, what difference does it make if
it's because of a cell phone or they're just being a jerk?

None of those studies established causality. Accidents and deaths have
been caused by persons driving while female, Presbyterian, Irish,
liberal, happy, etc. Should be enact bans for these? Baby boomers
cause more accidents than anyone else, simply because there are more of
them - perhaps we should get them all off the road?

You're not making sense. Read your posts back to yourself before
hitting send.
You want scanning rights not guaranteed by the constitution but want to
wipe out other peoples' rights enumerated directly in the 2nd
amendment. Do you want to be free or not? You either stasnd for
liberty for you AND those you disagree with, or you accept the loss of
your rights along with those of others. Take your pick, but you can't
have it both ways.

3549. Radioshack scanners - how does "data" mode work?

Newsgroup: rec.radio.scanner
Date: 1999-09-07 00:00:00 UTC
From: don wade <don_wade@mitel.com>
Message-ID: <qO7B3.2368$x7.53445601@nr1.ottawa.istar.net>
Source record: 107800

Some Radio Shack scanners have a button called "data" on the front. The manual says that this is used for "data skip" and thats about it. I rechecked the RS web page and it's still vague.

Does it look for no audio signal, a pager tone, a real data signal or what? Is there a mod to change the frequency if indeed it does look for a tone of some sort?

Not all areas use digital service. Many rural areas still have analog service only. This will continue for several years since a digital changeover is cost-prohibitive in these areas.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

No. Cellular frequencies are much higher than any of the other services you mentioned. As the frequency increases, the radio waves become shorter and closer together. The risk of cancer and other health complications increases markedly at the higher frequencies. 800Mhz (cellular) is classified as a "microwave band" by some. How does a microwave oven work? It heats the food by bouncing microwaves off of it. Substitute food for brain tissue and you can understand what I am talking about. Not real smart to spend hours a day holding a portable cellphone to your head, is it?

Because the jerk probably is at least aware of other traffic on the road
whereas the cell phone user hasn't a clue that anyone else is around.

The jerk is no more aware than the cell phone user, not because his activity imfringes on his awareness, but because that's as aware as he ever gets of other people. When the jerks are aware, they think it's cute to impede traffic intentionally, and that just leads to battles on the road.

Before you run out and put a scanner in your vehicle because you have a Ham Radio license, read your law VERY VERY CLOSELY -- it states that if it is an amateur radio and you are licensed. NOTHING, not even in the FCC rules, gives you the right to put a SCANNER in your vehicle because you have a HAM license.

As I recall, from reading the laws, and mind you, I live in Utah and there is no scanner law in Utah, the laws state clearly that they do not apply to licensed amateur operators.

Now, the FCC's decree on the matter clearly says that states should not punnish Hams for driving with amateur radio equipment that may coincidentally recieve police frequencies. That's probably what you're talking about. But all the scanner laws I read had an addendum to the effect of "this law does not apply of the operator is an fcc licensed amateur radio operator"

So, yes, go back and read the law.

Dear Newsgroup.

I have a R.S.Pro 2042 which hums on the VHF portion of the band. It's a hum like the unit is sitting ontop of a TV, it varies depending on the input signal level. There's no loss in sensitivity I can detect and it's power supply is not the culprit.

Can anyone offer any suggestions as to if it's the front end etc.. to aide me. I don't have a service manual so please excuse my shot in the dark here. Any replies would be greatly appreciated.

David

Heh heh. I wonder what the state of Illinois would say about me
plugging a scanner in to the cigarette lighter jack in my airplane?

Does the statute refer to "vehicles" of all sorts or does it refer
specifically to automobiles and/or trucks? If the former, perhaps you
lucky people in the State of Illinois could get the law stricken by
virtue of a conflict with a federal interest...

Well, usually the restrictions apply to civilians only, while mobile. _Exempted_ services usually include police, fire, and EMS (of course); and members of the Press (_on assignment_); licensed alarm system contractors; crime watch citizens part of a local crime watch with permission from the local Chief of Police; and federally licensed amateur radio operators. There is also usually an exclusion for civilians who obtain written permission from some local PD head. (Usually not a problem for regular citizens from what most people have been telling me.)

The INTENT of the law, wherever it is used, is usually, mainly, to stop criminals from using scanners while mobile to aid in the commission of a felony. (Don't say it; I know.) But that's the idea, anyway. Perhaps it also gives them an excuse to possibly add yet another charge to the list if caught during a crime and a scanner was in thier possession - perhaps to increase the fine, and to increase the length of time in jail, thus making it more difficult to get out of it that easily. Which makes sense, if so.

Civilians caught using a scanner while mobile and not being covered by any of the exemptions will usually just get a ticket. In some cases though, thier scanner may also be confiscated,

even destroyed.

This is why its important to know the laws in other states before you go on that trip. If you know where things are restricted, you can remove them to the trunk or something before you cross the state line, to keep within the law and avoid trouble.

I'm not aware of any anti-scanner laws in Illinois, myself, though. Doesn't mean it doesn't exist. May have (relatively) recently come into the lawbooks, and I just haven't seen it yet.

If anyone knows the exact statutory reference, let me know and I'll go look it up at our local law library, retranscribe it, and put it up here -- and on my web page -- so that more people will know about it.

Lemme cross-post this to alt.law-enforcement.traffic, too, in case there's an officer in there from Illinois who might know.

You need a suitable AC adapter with 6vDC, 200mA (ish) output. Centre is
positive. I'm sure you will find something suitable at RS. Mouser
Electronics also do/did a range of suitable AC/DC adapters for scanners
with details at http://www.mouser.com/catalog/cat_599/261.pdf

Be careful to check the output on the variable setting versions
especially if unregulated.

You mean, "provided, nothing herein shall be construed to
apply to federally licensed amateur radio operators." It
usually goes further to define the holding of an "amateur radio
operator or station license." But I'm picking. 8-)

HOWEVER, to back up the READ VERY CAREFULLY statement...some
states go further to ban them outright. And some _don't_ allow
licensed hams to be excluded.

You clearly haven't had that many encounters with jerks on the road, at least not the ones here in Ohio. There is no hazardous, stupid, lame, unaware, or otherwise ill advised action that a cell phone user might commit that I have not seen at the hands of a non-cellular using idiot. I have yet to be surpirsed by anything a cell phone user does on the road, having seen it all long before cellular phones existed. Eventually you will come to see that while speed has a limit, stupidity doesn't, and that garden variety morons can be far more creatively stupid than cellular users. After all, they've been perfecting their art a lot longer.

I may be wrong on this. I checked a few years ago when I took a cross-country driving trip. Indiana and Kentucky definitely ban them (KY does NOT make an exemption for licensed operators and is EXTREMELY strict with enforcement of their anti-scanning laws) and I thought Illinois did as well. Perhaps not.

Which is ridiculous, of course. If a guy's gonna commit armed robbery, I'm
sure he's going to be concerned about violating a scanner law.

The other purpose for the law, of course, is to keep people who have no lives
from showing up at accident scenes and making a nuisance of themselves.

Depends on the state. Most but not ALL states with scanner bans provide blanket exemptions for licensed amateur radio operators. But yes, there are some states that do not. The FCC rule ONLY gives protection for an AMATEUR TRANSCEIVER that also includes public service frequencies.

It has already been proven that cell phone morons are as dangerous on
the road as someone who is intoxicated. I'll take my chances any day
with a non-cell phone using jerk than with a brain-dead cell phone user
on the road.

>the antenna is almost touching your temple while delivering 1+ Watts of ERP RF.
>Just some thoughts.

Not so fast. First of all, if you're talking about a portable phone,
you're talking about no more than 300 milli-Watts. Second, the tumors
in lab rats study, if it's the same one as I've heard of, was done in
Australia by a couple of medical researchers who had no concept of
near field antenna theory.

The real exposure those rats got was substantially more than ANSI
standard.

Third, there are too many researchers in this field who are 1)
ignorant about electromagnetism and 2) falsifying results. One
researcher whose work at the cellular level was very highly regarded
was recently busted for throwing out 93% of his data without even so
much as a footnote in his paper indicating that he did so. Look up
Dr. Liburdy's case at Stanford, if you don't believe what I just
wrote.

The facts are very plain: if there are "non-thermal" effects from RF
exposure, they're very difficult to measure. These effects are so
small that it is doubtful that they are "hazardous" to the general
population.

However, if you choose, you can always make your very own faraday cage
and live in it. You don't have to live in an RF-soaked society if you
don't want to. Participation in society has risks and rewards. Don't
throw out the baby with the bath water...

Perhaps not.

Yes. Definitely watch out for KY. They are pretty strict.

I work in a data center and ther happens to be a cellular tower across the back parking lot. On Friday and Saturday nights, weoften hear some interesting stuff. Often, you will get a "good" conversation, then they will switch frequencies because their conversation has been handed off to an adjacent cell... usually with the scannerm you can search and find them, or wait on that and another conversation may pop up on the same frequency

I have a FCC Masterfile CD and was able to generate a map of the cell sites.. The CD stores thhe frequency as well as the latitude/longitude location. the lat/long information is used by mapping program to generate the map.

If you have a GPS, you can also use the lat/long information to actually go find the cell site.

I have noticed that often cell antennas come in pairs... If you see one, you usually see another close by... this is because one was a RCC and the other is the "wireline" or bell carriers antenna. NOw, ther are also PCS phones... PCS is 1900mhz. Conventional cellular mobile radiotelephone frequencies are in the 820-849mhz and 869-896 mhz, I often have received phone patches on other busines sband frequencies. the 464mhz frequencies used by shopping mall security is famous for this... The guard will answer the phone from his radio.

Here's the actual law. 1993, but still good now. The amateur
radio exemption can be found in Paragraph (4), Subsection
c). -Todd

Kentucky Scanner Law

Baldwin's Kentucky Revised Statutes Annotated (1993)
pp. 30-1, Crimes and Punishments
s. 453.570

453.570 Possession or use of radio capable of sending or
receiving
police messages restricted; penalty; enforcement

(1) It shall be unlawful for any person except a member of a
police
department or police force or an official with written
authorization
from the head of a department which regularly maintains a police
radio
system authorized or licensed by the Federal Communications
Commission,
to have in his or her possession, or in an automobile or other
vehicle,
or to equip or install in or on any automobile or other vehicle,
any
mobile radio set or apparatus capable of either receiving or
trans-
mitting radio or other messages or signals within the wavelength
or
channel now or which may hereafter be allocated by the Federal
Communi-
cations Commission, or its successor, for the purpose of police
radios,
or which may in any way intercept or interfere with the
transmission of
radio messages by any police or other peace officers and it
shall be
unlawful for any car, automobile, or other vehicle other than
one
publicly owned and entitled to an official license plate issued

by the
state issuing a license to a said car, to have, or be equipped
with
such sets or apparatus even though said car is owned by an
officer.
Provided, however, the provisions of this section shall not
apply to
any automobile or other vehicle owned or operated by a member of
a
sheriff's department authorized by the fiscal court to operate a
radio
communications system that is licensed by the Federal
Communications
Commission or other federal agency having the authority to
license
same.
(2) Any person guilty of violating any of the provisions of
this
section shall be guilty of a misdemeanor, and, upon conviction,
shall
be punished by a fine of not less than fifty dollars ($50) and
not
exceeding five hundred dollars ($500), or imprisonment not
exceeding
twelve (12) months, or both so fined and imprisoned.
(3) It shall be the duty of any and all peace officers to
seize and
hold for evidence any and all equipment had or used in violation
of the
provisions of this section, and, upon conviction of the person
having,
equipping or using such equipment, it shall be the duty of the
trial
court to order such equipment or apparatus destroyed, forfeited,
or
escheated to the Commonwealth of Kentucky, and said property may
be
ordered destroyed, forfeited, or escheated as above provided
without a
conviction of the person charged with violating this section.
(4) Nothing contained in this section shall prohibit the
possession
of a radio by:
(a) An individual who is a retailer or wholesaler and in the
ordinary
course of his business offers such radios for sale or resale;
(b) A commercial or educational radio or television station,
licensed
by the Federal Communications Commission, at its place of
business; or

(c) An individual who possesses such a radio, provided it is capable
of receiving radio transmissions only and is not capable of sending or
transmitting radio messages, at his place of residence; licensed
commercial auto towing trucks; newspaper reporters and photographers;
disaster and emergency services personnel authorized in writing by the
state director of disaster and emergency service (for state personnel)
oe chief executive of the city or county (for thier respective
personnel); a person holding a valid license issued by the Federal
Communications Commission in the amateur radio service; peace officers
authorized in writing by the head of thier law enforcement agency,
Commonwealth's attorneys and thier assistants, county attorneys and
thier assistants, except that it shall be unlawful to use such radio to
facilitate any criminal activity or to avoid apprehension by law
enforcement officers. Violation of this section shall, in addition to
any other penalty prescribed by law, result in a forfeiture to the
local law enforcement agency of such radio.
(5) The secretary of the Finance and Administration Cabinet is hereby
empowered by issuance of a secretary's order to exempt from the pro-
hibitions and penalties of this section the possession and use of any
and all radio communication equipment that he finds is necessary to be
owned and used by members of the general public and other nonpolice
persons for utilization in the N.O.A.A. weather radio system.

HISTORY: 1992 c 110, s. 1, eff. 7-14-92
1986 c 241, s. 1; 1980 c 137, s. 1; 1978 c 435, s. 1; 1976 ex s c 14, s. 443; 1976 c 166, s. 1; 1942 c66

CROSS REFERENCES

Safety and security officers of public institution of higher education, use of vehicles, 164.970

NOTES ON DECISIONS AND OPINIONS

OAG 89-11. A tape recording of police radio transmissions on a given
frequency is a public record.

OAG 98-11. The tape recording of all police radio transmissions on a
given frequency on an around-the-clock basis independently of and col-
laterally to a specific event is not "compiled on the process of detec-
ting and investigating statutory ... violations" within the meaning of
KRS 61.878(1)(f), and no "harm ... by premature release" will occur from
release of a tape recounting facts already substantially revealed by
news accounts.

OAG 82-126. Where the fire chief has given written permission to
members of his department to equip personal vehicles with flashing red
lights and sirens, the permission terminates when he ceases to be the
chief. The chief's successor must then provide such written permission.

OAG-82-126. There is no authority for the chief of the fire department to permit firemen within his department to install radios in
thier private vehicles for use in performance of official duties if
those radios are capable of receiving or transmitting police messages.

OAG-79-154. KRS 432.570 is impermissibly vague because it does not
adequately connote or embrace the use of radar detectors within the
existing prohibition protecting the effectiveness of essential police
communications.

OAG 78-384. A commercial radio station may legally use a scanner
(radio receiving equipment) which can receive police radio transmissions on a mobile news unit.

OAG 66-495. No private car may be equipped with a sheriff's frequency
two-way radio.

Many counties in California also have a similar law on the books, which requires officers to confiscate your scanner if they catch you using it mobile. The standard exemptions (including ham radio) apply and it is very selectively enforced (I really doubt that most cops in LA County, for example, even know.) But one did tell me I wasn't supposed to do that, and said he'd "let it go this time..." The idea is not to hassle average joe scanner listener, they could care less about that, but if you commit a serious crime while using the scanner, they use that as an excuse to add more charges to the list.

The moral of the story is of course use your head - don't go robbing banks with scanner in hand, or something like that, and go out and get a ham ticket if you live in one of these states or counties that restrict scanner use. Most (not all, as another poster pointed out) will let it go if you are a licensed amateur.

Thankfully, Arizona is not one of those states... So if you plan on visiting our state, your scanner can ride up front with you.

Proven?!? Excuse me, but it seems you need a little refresher on the scientific method. ONE study found a the CORRELATION between cell phone use and accidents to be the same as that for a given level of intoxication. The study has not been subjected to peer review or reproduced. To date, nothing has been presented to support CAUSALITY in that correlation. Similar correlations might be shown to exist between accident incidence and one's name starting with a certain letter fo the alphabet, say 'J', but that doesn't make you an unsafe driver, does it? Furthermore, the correlation simply shows that the same percentage of accident causers were using cell phones as were drunk, which is all we really can find out since there is no data on how many cell phone users didn't have wrecks, any more than there is data on how many drunks made it home unscathed. Those two equal numbers of accident causers could represent 90% of the drunks on the road in the period examined, and only 5% of the cell phone users. That's without even talking about number of miles driven while drunk or using the phone. When I first heard the media sound bite about cell phones being as dangerous as DUI's, I thought WOW, but then as I heard the details, and then thought about the data available, and then actually QUESTIONED how they could reach their conclusions from the data available, and I realized it just didn't hold water. Don't just accept everything you hear on the six o'clock news, especially when it's used to support another expansion of government. Last month, the local news featured an item on Ohio police cracking down on tailgating (which under Ohio law is defined as only being established when you actually rear-end someone - how can you have a crackdown then?) The cop they interviewed made some bold claims about how the average car took over 150 ft. to stop from 60 mph as justification for the crackdown. A quick perusal of Car & Driver revealed that the Jeep Cherokee, a 12 year old design truck with drum rear brakes, could beat that figure by more than 20 ft. They love to use bogus claims and dress them up with numbers to get people to accept the loss of liberty.

3585. Re: JD Sullivan: Pay Up Now !

>Would you feel the same way if it were YOU who was being singled out for
>persecution? How about if you were innocent?

That's definitely a valid argument, but raises the question, "Where is JD Sullivan?" Does he not know that he's been labeled a scammer on the internet? Most people (including me) would tell a buddy of theirs if their buddies' name appeared listed as a scammer. Then it's up to the guy to come and provide his side of the story. But this guy never has. That can only mean one of two things. Either:

A. The guy really is a scammer and has gone into hiding.

Or

B. There is no JD Sullivan and this is just another troll posting.

If A. is correct then why hasn't this guy come forward to either apologize, or deny the charge? If I were listed as such, I would be the first to step up and tell my side of things, the radio never arrived, so I never sent the check, it arrived broken, so it's on it's way back - no sale, etc. I wouldn't just leave it up to the reader's imagination like this. Plus most people will gladly step up to defend someone who did good by them. I've seen it happen before, "So-and-so is a ripoff artist" gets followed up by "So-and-so delivered the goods for me, prompt and as advertised." But no one has stepped up for JD.

LOL, of course if B. is correct then whoever wrote this is having one hell of a laugh at our expense. We'll never know for sure....

But that's how I see it. That's why I think postings of people who never shipped the goods or never sent the check are a good thing.

where I can I find out how to modify my scanner to pick up cellular calls? it currently picks up cordless calls. we have learned that someone has been trespassing onto our property (many many acres) and stealing personal property and animals...we've been told they keep in touch with one another via cellular phone and would like to know when they are here so we may contact police and have them arrested. Our land is too vast to visibly see them when they are trespassing and stealing. thank you.

>connectors are different"

Yes, I've had similar experiences. But it's easy to figure out why these guys are so cell phone smart and scanner ignorant. Go back to the store and ask the manager how many scanners he moves a month. Probably less than a dozen. Maybe even less than 6.

Look at it from the managers' perspective. Put yourself in his shoes. You have cell phones flying off the shelves all month long compared to meager scanner sales (hopefully the new RS units coming this fall will change that for the better). Are you going to waste valuable training time on an item that a few of your customers asks for? Especially when most of those customers know more about scanning than anyone else?

Give these guys a break, OK? It's not that the managers are dumb, it's because they know that the scanner-heads already know what they want. I don't expect the kid pulling down less than $10 an hour to be a scanner guru like me - he probably doesn't even own one! Too expensive! I currently have 6 of the darned things, and have been involved with scanning since I was 16 years old - 12+ years ago.

So when he tells you the antenna won't fit, just tell him "Yes it will." and buy the antenna. You know the facts, he doesn't. And the kid will learn something for the next time, so the next scanner-head who comes in won't get the same treatment.

>
> My thought was dogs. Large dogs, that look menacing. Let them live next
>to the stuff you don't want stolen.
>

Naaah. Dogs are easy to disable with a simple jar of peanut butter. They will sit there licking it for hours while the bad guys walk off with whatever they please.

You want real protection? I knew a guy in California who owned a junkyard and used dogs. 3 big rotts. Someone did the peanut butter trick and walked off with a bunch of parts. He came to work to find the fence cut, stuff missing and the three big dumb dogs still licking the gigantic family size peanut butter jar at the other end of the lot.

So he augmented the dogs with geese. You can't bribe a goose with food. They will honk and hiss and snap at anyone who dares invade their space. They will chase you until you leave. They make a rottweiler look tame. The honking also alerts the dogs. Picture yourself as a burglar. You go to one end of the lot and toss the jar of Skippy over the fence and listen to the dogs chowing down. You then head to the other side of the lot and slip over the fence, ready to do your thing, feeling pretty slick at this point. Then, within seconds you hear a ceaseless tyrade of "HOOOOOOONK HONK HONK HOOOOOONK" and there before you are these big nasty birds snapping at your heels, your hands, your privates, etc. Then in the distance, approaching fast, you hear the growling barking trio of rottweilers coming to see what is going on. The racket from the birds is worse than a train wreck. People who live nearby are turning on their lights and looking out the window. One of them looks like she's talking on the phone to.....

Now, then. Would you stick around for long?

Nothing else walked off that junkyard after that... I wonder why ;-)

That's what I'd do in this case... 2 or 3 big dogs and 6 geese. The ultimate burglar alarm.

Then the 12 gauge mosberg and some rock salt for anyone dumb enough to stick around...

Version 2 completed. Major surgery performed so big leap from 1.00 to 2.00 Now works with ICOM PCR1000 and Yaesu FT920 (with antenna switching). Free for non commercial use. Feedback REQUIRED !!! As discussed on yaesu reflector, this type of program is no use in detecting dx on crowded bands BUT if you want to know if 6mtrs is really dead then this will tell you. If you are using version 1 then please uninstall it. Requires PC with win95 or above to run. Only connection from rig is serial port line. I do not use a sound card or safety net.

It doesn't use a bulb. There is one green LED embedded in the plastic
that surrounds the display.
I installed another three LED's at various points around the display
that gave somewhat better illumination.

shifflhl@jmu.edu (Pete Shifflett) wrote:
> ... what is in this band?

In the US, 596-800 MHz corresponds to UHF TV channels 35 thru 68. The only fixed exception is 608-614 MHz (Ch 37), on which no transmitters are allowed (it's reserved for radio astronomy). The start of each channel can be figured as Freq. = 386 + 6*Ch#.

About the only regular uses besides broadcast are wireless mikes of various sorts (such as your coach's system), which can run within any unused channel (except 37). If your game is broadcast, you may find the remote truck talking with the cameramen and talent, usually on a lower channel. While police undercover operations can use these freqs, they're very low power and you're unlikely to run into one (unless your campus has a real problem).

> Is there a scanner that will scan the freq range from 600mhz to 799mhz.
> We ... must constantly switch freqs to avoid conflicts.

Only the very high-end scanners include this range, and a 200 MHz search range would probably miss short xmissions. Probably the simplest approach would be a cheap portable TV with a continuous tune UHF. Map out all the regular uses (broadcast, music & drama clubs, lecture room mikes, etc), then search the remainder just before the game. When playing away, contact your opposite number at their stadium and see if they have a similar list. Who knows - you might get their system freqs. and tap their coaches.

3608. BC245XLT...HELP!!

Newsgroup: rec.radio.scanner
Date: 1999-09-08 00:00:00 UTC
From: Rob Ennis <rennis@twave.net>
Message-ID: <01befa6a$54f3e520$8beadbd0@rennis.twave.net>
Source record: 107509

I'm not stupid and I'm not new to scanning. But I have purchased a new BC 245 XLT so that I can monitor the Hickory (NC) police department, which is a GE (EDACS) trunking radio system. After nights of going blind, reading the manuel, and programing, and re-programing, I still cannot get the radio to pickup the GE system (well, I did for a few minutes and then lost it). If anyone can explain to me, in very simple terms, how to program for the EDACS trunking system, I will owe you for life...

Please respond directly to rennis@twave.net

And thanks for any help

Rob Ennis

>Burt Smith,

It seems that the units with double conversion have image rejection
"problems", and those with triple conversion do not. My take is
that the newer units which have triple conversion probably do not
accidentally pick up cell calls.

Message-ID: <rtdsnc7g1iv18@corp.supernews.com>
Source record: 107512

Uniden included an order form for "Scanner Master" software with their radio. Is Scanner Master the best s/w available or is there something better around? Comments please.

Also, is the s/w found at best prices via mail order companies? If so, which ones?

Thanks again...

You must know the configuration of the EDACS system you are trying to monitor. In other words the frequencies must be in the same order assignment as they are on the Erricson system for it to work reliably. That is why you MUST find information out about the setup of the EDACS System you want to monitor and without it you are SOL.

I know this is not what you wanted to here, but it is true.

Guess it's time to scoop up those MS200's with the excellent Rx'ers in
them then, eh?
<g> I think Uniden is taking their sweet time with dropping a new
upgrade/feature into their scanners slowly. If someone made a scanner
with PL/DPL(like the RELM), Trunktracking(like Uniden), and a
programmable-by-channel delay(like some Radio Shacks), ample
channels/banks, good/bright alpha-numeric display(like the later
Bearcats bases), wide Rx ability, good receiver(like the Relm) then
they'd make a helluva lot of $$$$. But, what would they do after
that? That'd be hard to surpass. That's why they're taking their
time.

Then you don't own a PRO 91 or a 245 or an 895....

All of mine have picked them up - usually in the aircraft band, of all
places...

It's usually annoying. I could really care less about cellular traffic, but
when it squashes the police helicopter right in the middle of an interesting
recount of a pursuit or something to his buddy across town in the other
helo, it sucks, big time.

Everyone should toss their analog phones and go with PCS - that way you
won't hose my scanners! ;-)

The PRO 91 gets KILLED in downtown areas from all the pager noises and
stupid cell phones. It's almost as bad as the old dual conversion units. I
look forward to the 92 with it's CTCSS feature - no more images!

Correct. And, if a trunktracker and CB capable radio in one is what you
desire, look no further than the 2066 mobile from Radio Shack. AFAIK it's
the only one that does it.

Source record: 107522

Only the older scanners. Radio Shack nor Uniden will sell them
for the current models. The newer scanners are also designed
to be "not easily modifiable" (per law) and also likely to cause
damage if attempted. The manufacturers are also covering several
of the SMT components with an epoxy glob. To see which models
of the Radio Shack scanners you can buy a Service Manual for,
visit this link:

http://support.tandy.com/support_electronics/2849.htm

Look for "Service Manual" under the Detailed Parts List for
any of the scanners listed.

Source record: 107523

Here's the tap point for your scanner:

DISCR/DET CKT BASEBAND
SCANNER CHIP TYPE SYMBOL AUDIO PIN
========== ============ ======= =========
PRO-2050 MC3361CDR2 IC-2 9

You can also add a PROgramit interface, which allows you
to program and control your scanner via your computer. No
more manually entering the frequencies. If you would like to
have these mods done for you, I offer these services through
my website. To learn more about the PROgramit interface,
follow this link:

http://dune.globe-net.net/~rc123/Robert/PROgramit/PROgramit.html

Any questions, contact me directly.

Sigh.... Here we go again.....

Generically speaking, yes a computer could be made to do it, just like they have for MDT and pagers and such... Digital phones would be no different. That's where the good news ends.

Specifically speaking, it would be a monumental task. You would have to find the protocols used by each phone. This is doubly difficult, firstly because it is encrypted, and secondly because each manufacturer does it their own way - there is no standard.

Then you have to connect a data slicer, a little circuit used to take the audio signal from the scanner and convert it to series of binary digits. This can also be done with a sound card, provided that the signal is a 2 level signal. Most circuits these days employ a 4 or 8 level encoding scheme to get higher baud rates than the traditional 0 or 1 (2 level method) though, so a circuit must be built for this.

Your program must then be able to take the received signal and attempt a decryption routine until it comes up with a matching frame sync sequence, then apply that key to all further received data blocks until the call ends. Then you get to start all over again.

So let's say you're a total genius and you figure it all out. Now, what can you do with such an invention? You can't sell it, god knows how many patents you've violated. You can't even prove to anyone it works because the feds will nail you in a heartbeat at the behest of whatever companies protocol you cracked.

If you were a real wiz, you could reverse engineer the phone and use it as a phone scanner, or feed the raw audio from the scanner into it's own conversion circuitry. But then you have to still beat the encryption, or you will hear nothing but static.

In short, yes, in theory, it could be done. You could, in theory, crawl from LA to New York on your hands and knees, too. Such a feat is possible but very impractical to actually do. Don't look at me to try it....

From: "Jason C. Bailey"
Message-ID: <7r74bi$n3s$1@nntp6.atl.mindspring.net>
Source record: 107526

Phil,
In response to your request for a definition, I would like to add to Al's comments. Being a firefighter/paramedic and working accident, etc. scenes for several years, I have seen my share of the so-called "ambulance chasers". I don't wish to offend or discourage anyone who stops at scenes to render aid, but I do wish to speak for most career and/or volunteer fire/rescue services by saying that there aren't too many things more aggravating than seeing someone drive up to a scene, get out of their vehicle, clip their trusty handheld scanner to their hip, and walk up to the scene without appropriate protective equipment and expect to "save the day". It is easy sometimes for those who want to help to forget that we must all perform our duties safely.
I could probably go on for a while, but you get the idea.
Jason.

Rick,

The Ferrites (Beads as they are called) act as filters for EMI (Electromagnetic Interference) that is generated by the monitor, microprocessor and PCB clocks, etc. in your PC This interference can exist into the 100's of MHz or higher. Electronic devices are required to meet certain regulatory requirements (FCC part 15 in the US) that limit the EMI in certain bands. This is primarily to avoid problems with radio and TV communications.

However, computers have some interesting loopholes in these regulations. For example, to avoid having to test every possible combination of every possible hardware option (modems, video cards, network cards, disk drives, etc.) which would be millions of combinations, the FCC allows a "typical system" to be tested and licenced. Then any piece of hardware that was licenced independently (tested and passed in another system) can be used without violating the regulations.

Bottom line - MOST combinations of hardware (especially from offshore manufacturers - not Dell, Compaq, IBM, etc.) would fail EMI tests if done. They can generate electromagnetic energy in many different frequencies.

Ferrite beads placed on external cables (mainly Monitor, Printer, Network, and external SCSI) will help reduce the interference. They can be purchased at many computer or electronics supply stores and should not cost more than a few dollars each. Some high-end audio guys are paying $50 or more for these things - they cost about .25 to .50 to manufacture.

Good luck.

David

between an
>Ambulance Chaser, and a casual observer with a scanner? Is
there one?

"Ambulance chasers" are usually unscrupulous lawyers who race
to accident scenes (or hire people to race to accident scenes)
to try to swipe up "customers" who were (or were not) injured at
the accident scene.
They can also be the "not-so-casual" observer who using a
scanner raced to the scene to be able to watch personally, and
who had no business, or reason, for being there.
I'll even go as far as to add a definition of my own to that
to include even public service personnel who were not on duty,
or not called to the scene, who show up anyway unannounced, and
who might then even get in the way, or take unauthorized actions
at the scene, or cause unauthorized actions by thier own
commands to be effected by other on-duty personnel at the scene
who had no idea, when they had no business getting involved.
(There is some risk in that.)

their grubby
>little paws in in yours or someone else's pockets.

Or, as has already happened to me personally quite a too-many number of times, who read these newsgroups, write down your name, CALL YOU UP AT HOME, and ask you to listen to the scanner for them and alert them ASAP whenever you hear of an accident, and who either want it free on top of that, or for a rediculously small fee. (I don't care how much you offer me, you're not getting that kind of service from me.)

Each time, I promptly called the FBI on them. And the FBI promptly responded each time with "Oh? Okay. Well, if they do it again, let us know."

Sigh!

Todd

Reporters are usually exempted from scanner laws in state
statutes. They're there with a reasonable purpose...to 1)
gather the news and then 2) to report it to the public.

I think the point that people are trying to make is that we shouldn't have needed a new law for this.

Had the police been doing their jobs and enforcing existing traffic safety laws, people visibly distracted from driving by their cell phones would have been getting routinely pulled over and ticketed.

But asking a traffic cop to *think* is aparantly asking too much, so they just went ahead and told them "if you see a phone in their hand, ticket them whether or not they're causing a problem."

Frankly, I'm a libertarian, but I don't blame government for our problems, I blame the public.

Todd,

The FBI is the wrong organization. Next time carefully document
the call and then you call your State Bar Association and ask to speak
to the person in charge of professional ethics or attorney discipline.
Explain what happened. Most people think the bar association will ignore
it, but believe me NO attorney takes and ethics complaint lightly and
openly seeking such cases in this manner will be a violation in every
jurisdiction. There is a whole lot wrong with the legal profession
today, but there is still some recourse against the more flagrantly
sleazy practitioners.

There's a junkyard out here in Utah that's got a watch pig. Big full grown pig. Powerful beast. It's response tactic is simple. Step one: Trample intruder. Step two: Stand on top of intruder. This generally results in broken or cracked ribs and/or limbs. They haven't had much trouble.

> How do you know the studies didn't?

Because they said so. They cited a correlation, not a cause. A correlation means two phenomenon happen to coincide - it doesn't mean one causes the other. Is everybody in this country REALLY so scientifically illiterate that they don't understand this? Just because someone says, "a study shows" doesn't mean squat. Do you also think you have the whole JFK assassination wrapped up because you saw Olicer Stone's personal speculation? JUST BECAUSE IT'S ON TV OR IN PRINT DOESN'T MAKE IT GOSPEL, PEOPLE!!!

> Are drunks just driving drunk, and not causing fatal accidents?

No, and controlled experiments with test and control groups have established CAUSALITY in the case of acoholic impairment and driving.

> this.
>
> This is but one case.

That's right - ONE CASE. That's what's called an anecdote. It means essentially zilch. Hundreds of such anecdotes mean zip, nada, squat, because there could be millions of anecdotes showing the opposite. Do you think Newton, or Pasteur, or Faraday said, "hey, my cousin's hairdresser's boyfriend met someone who heard of a guy who said that.." and thus established the principles upon which all the technology we use today is founded? There are rules for establishing things like cell phones causing accidents, and they're in place because they are consistent with logic and because they work. These same rules were used to develop the semiconductors that allow you to read this, and the vaccines that have kept you alive long enough to read it, the radios you all use, etc., and in the case of the "cell phone menace" the much vaunted study everyone keeps citing didn't satisfy them. It merely indicated what is an interesting set of coincidences until further, more rigorous research PROVES otherwise.

3644. 600-799 mhz scan

And that means??? SQUAT! They are not in a position, based on their personal anecdotes, to determine that. I suppose you think the EMT's in the ambulance are going to find the cure for AIDS, too.

> Again, you can say it anyway you want but it dosen't change the fact
> that idiots on
> mobil cell phones are a hazard on the highway.

REPEAT IT AGAIN, MAYBE THAT WILL MAKE IT TRUE!!!

It's not a fact, it's your OPINION, and so far, you've failed to demonstrate a logical reason for holding it. You can repeat it all you want that they are a hazard, but that doesn't PROVE a thing. Stand up and shout it from your roof; it doesn't make it so. Hey everybody, JJ says cell phones are a hazard; let's all just ask his personal opinion on everything from now on. Everybody can stop looking for answers to life's questions, because JJ has them all already. By the way, JJ, while you're expounding on the wisdom of the ages, why don't you tell us how to cure cancer?
By the way, I happen to personally FEEL that they probably are a hazard, but only in the hands of people who shouldn't have been issued a driver's license in the first place. However, in the absence of valid PROOF that my opinion is correct, I will not demand that government enact my personal opinion into law. Even if proof should come, I will still be reluctant to expand the power of government precipitously.

Hi, Pete,

Most consumer-grade scanners omit the entire range from 512-805MHz because the only (legal) signals in that range are UHV TV stations, and it's convenient for manufactururers to design triple-conversion circuits that position IF's to take advantage of this gap. But, there are high-level scanners that do receive in this range. Two models I own (available today only on the used market) are the Realistic Pro-2006 and the Icom IC-R100. One model available new today is the Bearcat BC-9000XLT.

If your immediate objective is to find out what presently (legally) occupies this range of frequencies in your area, just check your TV guide for channels 35-69. If you're looking for uncongested frequencies for two-way use, though, you won't be able (legally) to obtain licenses to use frequencies in this range.

If your broader question is where to find the best available frequencies for two-way communications use among your coaches, that's a really interesting question. My hunch is that your options will be limited by commercially available head-set transciever equipment. These range from Radio Shack 49 MHz toys, to traditional itinerant business equipment, to the latest generation of economical Family Radio Service equipment, to exotic FCC-assigned NFL-grade crypto-stuff. All of these except 49MHz should offer plenty of uncontested frequencies, but you may be looking for more.

This is the way the law now reads in New Jersey. After years of having an outright mobile scanner ban, radio enthusiasts were able to get the law changed a few years ago.

>Holding a cell phone to your head for hours won't even heat your blood.

Whatever. I'm not a doctor, nor do I play one on the newsgroups. Personally,
I choose not to take chances with this. Just because something has "not yet
been proven" does not mean there is no risk. These things take years of
studies to prove conclusively.

Do as you wish. Me? I think I'll play it safe and not hold a microwave
transmitter to my head each day. Your mileage may vary.

Note: this address does not accept unsolicited e-mail. Please contain all
discussion regarding USENET posts to the appropriate newsgroup thread.

All you need is a Uniden 860XLT scanner and program your search area for 894.100 thru 914.00 this will pick up the harmonics of the cell site repeater. I just love all these people who could help people like you that really need this info (BUT these people wanna be complete Aholes and tell you to use the legal system - which in this country seem to only work for the Very rich or the Very connected). I feel anyone has the right to use what ever means are available to protect theirself, family & property from what ever the threat is. GOOD LUCK.

Yah. Its kinda like states having thier own law forbidding
commercial trucks from possessing and using radar-detectors when
there is already a _federal_ law prohibiting thier use. I
imagine technically, you could be fined twice, there.

I have an Icom PCR1000 and, in spite of several months of auto scanning
while at work, I have yet to hear anything other than UHF TV stations.
For years I had heard of all sorts of "Secret" comms in that range.
Nothing odd. Ever. I am not saying that someone is not using spread
spectrum, but in the cnetral Ky area nothing.
But, having said that, I doubt if you can purchase transiceivers for
those frequencies because they are allocated for TV.

>know where it came from.

I tie my HT into L-side audio on my VCR, and scanner into
R-side so I can hear both, or hit the "audio select" button my
my remote and hear one at a time, while still recording both
sides. At the same time, my vidcam is plugged into the VIDEO.
I use this to watch repeater inputs and outputs while a
particular trucker individual drives through the area and causes
havoc on our 2-meter ham repeaters. Helps in tracking (that's
read "RDFing"). The HT scans repeater inputs, so you can see
the signal strength reading; while the HT, on a cantenna to
block out band-opening stuff, monitors repeater outputs.
For a while I had hum off the scanner, or the audio would
disappear completely if plugged in all the way on my BC-100XLT.
That's because I had the wrong adapter. You need a mono-mono
adapter, not a stereo to mono adapter.

I'd have to see the actual ruling. Yes, the HAM was exempt, but that's not a blanket exemption. If the judge ruled that the HAM was exempt with no circumstances, THEN it would be a ruling that was new and setting a precedent. However, I suspect that unless there is other information, the judge was stating the exemption on the merits of the case, which may have actually included compliance, like he only had HAM or non-police public service in his memories.

Source record: 107628
Cross-posted to: alt.cellular,alt.cellular.motorola,alt.cellular.tech,alt.cellular-phone-tech,rec.radio.scanner,rec.radio.swap

To all:

Can anyone provide me with information regarding cellular telephone patch antennas? I'm referring to the small squares that attach to car windows, or to various stick-on patches that attach directly to the phone itself. They are sold under the theory that they increase the signal strength that the handheld cellular phone receives, but I'm dubious. I'd love to boost the performance of my phone. If you have any web sites that refer to field tests of these antennas I would like to see them also - my searches have been unsuccessful so far.

Please reply to medic1529@mindspring.com. I do not visit these newsgroups regularly. Thank you in advance for your help.

And I disprove it every time I get on the expressways and have no problem with cell phone users. See the problem with that? Your experience proves nothing, except maybe that YOU have a propensity for bad encounters with cell phone users. Your personal experience is what we call an anecdote. An anecdote, or a hundred of them, do not prove a generalization like the one contained in your oft repeated (and consistently misspelled) mantra. People relate anecdotes all the time about how the psychic hotline guessed some detail of their life correctly; that doesn't mean it's for real. In any event, given your clear hatred of cell phone users, you would hardly qualify as an objective observer. That, and your mindless repetition of an assertion unworthy of a six-year-old, effectively destroy your value as a source in this.

> Again, you can say it anyway you want but it dosen't change the fact
> that idiots on mobil cell phones are a hazard on the highway.

Here, let me put it in the only terms you seem to understand: Again, you can say it as many times as you want, but it DOESN'T change the fact that your statement about use of MOBILE cell phones being a hazard is merely your OPINION.

Now, go and finish high school, and maybe you'll understand.

>
The answer to your question is that you must get rid of the pro 90 & buy a
scanner designed to get 27Mhz AM CB frequencies. The pro-90 was not designed
to display or recieve AM/fm signals below 29Mhz.
Some older scanners(pre 1994 mostly) that were built to recieve & diplay the
full 800Mhz & then "blocked" by the factory, were able to be "restored" to
full 800(cellular) coverage by removing the "block" that the MFGR put in the
radio. Your pro 90 has no secret "block" of CB channels & therefore can't be
"restored". Some people still refer to "restoring" or "unblocking" older
scanners as "MODIFYing" them,(The wrong term really) and this leads people to
wrongly think that new scanners being made now can somhow be "modified" to get
the scanner to display CB, cellular or some other freq range that is not
designed into the radio to begin with.

away you
>know where it came from.

I tie my HT into L-side audio on my VCR, and scanner into
R-side so I can hear both, or hit the "audio select" button my
my remote and hear one at a time, while still recording both
sides. At the same time, my vidcam is plugged into the VIDEO.
I use this to watch repeater inputs and outputs while a
particular trucker individual drives through the area and causes
havoc on our 2-meter ham repeaters. Helps in tracking (that's
read "RDFing"). The HT scans repeater inputs, so you can see
the signal strength reading; while the HT, on a cantenna to
block out band-opening stuff, monitors repeater outputs.
For a while I had hum off the scanner, or the audio would
disappear completely if plugged in all the way on my BC-100XLT.
That's because I had the wrong adapter. You need a mono-mono
adapter, not a stereo to mono adapter.

That's a shame. They had the right idea going with the handheld and mobile units they sold. And they are an APCO25 signatory. They could've been Numero Uno with an APCO25 scanner, if they had thought about it long enough...

Very disappointing, to say the least.

This leads me to wonder though. Is it possible that a company that makes APCO25 systems (bases, mobiles, handhelds, consoles, controllers, etc.) would consider making an APCO25 scanner to be a conflict of interest? I mean why would they make a unit for $1000 or less that would take the place of an additional $10000 console unit?

This might be why Relm got out of the scanner biz... they figure folks like us who just gotta monitor APCO systems will go out and buy their $3000 handheld transceivers.

>GOOD LUCK.

It's not that people want to be a-holes - at least not all of us. But with our government seemingly singling out scanner users and making examples of us, you'll find we aren't too willing to have documented proof of aiding and abetting a violation of federal law.

All it takes is someone to read your post, do as you say, get caught and then spill the beans as to who told them how and you just jumped out of the pot and into the fire. Ask a certain scanner guru out of SD, if you can find him.

Not smart.

People in the know and people who aren't too lazy to look in the right places don't need usenet to tell them how to use their scanners for legal or illegal purposes. As for the others, well learn as I learned - by trial and error and searching for it.

That keeps people like you and me out of courtrooms and jail cells.

It's your choice to make of course. I can't make it for you, and I won't feel sorry for you if you make the wrong choices and get called on the carpet for it. But it will cause all of us problems in the future.

We are seen as a bunch of high tech troublemakers by some very influential people in our government. The use posts like yours to lobby for bans and restrictions, and the uneducated members of Congress just nod and vote "Yes".

You want to help this guy? Send him anon email via a remailer. Don't post it for all to see. This guy might be another 20/20 reporter... or worse.

There are also some laws on the books that require any one who is about to
enter the city and commit a crime is required to notify the Chief of Police
24 hours in advance. I bet the chief is just flooded with calls...;-)

If you live in such an area, you should see about applying for said permit.
That might show them how absolutely stupid it is...

>Yes, there are some models of scanners that can be modified, but they are no longer being manufactured or sold as new in the U.S. You would have to find one for sale on the used market. >>>

Except for the "NEW" Icom IC-R10s that may still be sitting on shelves in stores to be sold. The ones that got shipped here in 97 & 98 and maybe even early 99 could be modded to open the full 800 MHz range . Well after the ban of 94. The newer ones (mid-late 99), rumor has it, were made to correct this "problem" but I don't know if Icom did a recall of the 97,98 and early 99 models. I still have found no verification that Icom even did correct this "problem".
I got my "NEW" R10 in late 1998.... and the "problem" still existed.

I'm looking for info on Calif State Parks unit numbering, freq., and comm centers. I've got a listing from the FCC database but I need specific info for each location. Such as "SLOComm" is the dispatch center for San Luis Obispo County. And R650 is a ranger at Cuyamaca State Park. Get the idea?

In other words, I don't need info that is already in the usual scanner books (Police Call, Scanfan).

Appreciate any help and I'll post my completed database using what I receive.

Randall Buxton

I'm surprised nobody has come up with a "Cell Tracker" type program, similar to the Trunk Trackers except it tracks a cellular call through its various handoffs and retunes the radio to the new frequency each time. Surely this is no more difficult than decoding pagers or trunked radio control channels. Illegal? I suppose, but that didn't stop the authors of the various pager decoding software packages...

With a suitable bracket/mount it works fine in a car, it takes 12volt
DC into the back of the scanner.

I have two 2030's, one that is cell modifiable and one that isn't. I
don't know the date codes that separate them but you could find them
with a net search.
This isn't that much of an issue as 2030's, being double conversion,
pick up images easily and clearly.

The 2030 is a very good beginner's scanner, very sensitive (sometimes
overly so) and was real cheap when they closed them out a few years
ago.

There is no law in Illinois prohibiting the use of scanners anywhere,
including vehicles. There was an effort a couple years back, but thanks
to members of CARMA and SABRE it was defeated.

Wow, where to start?

"Much higher" is a subjective term, but cell frequencies are very close to UHF TV frequencies. In fact, TV channels 81-83 were reassigned from TV to cell frequencies and became the 800 MHz cell phone band. Today's channel TV channel 69 operates at 805 MHz.

At radio frequencies there is *no* evidence relating incidence of cancer to higher frequencies. Ionizing radiation, yes, but that is not RF. The most recent RF-cancer scare tried to link amateur HF frequencies (less than 30 MHz) to leukemia. Real paranoids are still talking about 60 Hz radiation from power lines.

Microwaves may boil your blood, but there's no link to cancer. Microwaves heat by friction, caused by the molecules vibrating in resonance with the radio frequency. Heating tissue does not cause cancer, just cooked meat. Holding a cell phone to your head for hours won't even heat your blood.

Monday aftenoon the BBC ran a short story on cell phone "dangers".
A british MD demonstated that the standard cell phone does have an effect upon the human brain. IT actually improved certain problem solving skills and was beleived to raise the internal tempeerature of the area of the brain closest to the cell phone and thus increase blood flow. The good MD pointed out that while no harmfull effects have yet been proven, the fact that a repeatable effect can be measured shows there is real risk. The heating was caused by 1 watt of 800MHz.
I can just see the PSAs now...
Friends don't let friends cook there brains.
OR

If memory serves, it's only illegal to have a mobile scanner IF you use it in the commission of another crime....i.e. commit a bank robbery, and use it to assist with the getaway. Ludicrous law, what a waste of paper. It's probably a msidemeanor anyway, and won't that make a difference in your time in the jug... if it could be proven anyway!!!!!

They are trying to hide their investigations from those who are being
investigated: the criminals who listen to scanners set to police
frequencies, to know when officers are assigned other calls, so they
can rob their banks and liquor stores. Normal, law-abiding citizens
have nothing to fear from the police.

3724. How to Monitor Cellular Telephone calls

Newsgroup: rec.radio.scanner
Date: 1999-09-09 00:00:00 UTC
From: Jake Brodsky <frussle@erols.com>
Message-ID: <rcHXN5GpOwjdXP5Eb09HW6TtmaQe@4ax.com>
Source record: 107442

In the interest of public service, I hereby post this very simple method for "intercepting" a cellular telephone call in the United States. This method is a matter of public record, since I happened to mention it in comments I filed with the FCC and with my Congressional Representatives.

Go get a Cable TV tuner. Attach the Cable side to your scanner antenna. Attach the TV side to your scanner. Set the TV tuner to downconvert to Channel 3. Set the tuner to any channel from around 72 or higher. Set your scanner to Low Band VHF. Your best scanning will be around 66 to 72 MHz. If your scanner doesn't cover this range, scan as close as you can to it, preferably on the high side. You should be able to hear all sorts of cellular telephone calls. Cable TV tuner boxes are some pretty high quality down-converters...

By the way, this is illegal for any private US citizen without a search warrant or a reason to perform cellular telephone maintenance.

Don't do this.

The reason I'm posting this is to show how ridiculous these laws and prohibitions are. This is a sham. For all practical purposes, this law can be circumvented with only minor efforts. And no, nobody in Congress would dare consider prohibiting cable TV downconverters. Further, I doubt someone who merely monitors Cellular Telephone conversations would get caught. Police wouldn't even know what to look for even if they did have a search warrant.

Well, you wouldn't have to move far, especially if you're in the eastern suburbs of Cleveland.
This is exactly what I'm talking about when I say personal experience does not prove the general case. I've never had a problem with anyone on a cell phone.

> people on their cell phones become so engrossed in their conversations
> they are completely oblivious to what is in front, behind or on either
> side of them. Just last night in front of my house a kid yakking on his
> phone rear ended a bus that had stopped at a bus stop.

And I saw the same accident occur in 1981 - how many cell phones were ther then?

> If you are
> looking for statistics try the insurance companies, as I have heard them
> make numerous sound bites on the subject on local newscasts.

Exactly - that's where the noise is coming from. Why? Because either they;ll get laws passed banning cell phone use, and you'll get ticketed, and then they can raise your premiums, or they could just add a general surcharge to anyone who has a cell phone. IT'S ALWAYS THE MONEY!
